For the aforementioned reasons, the AA also finds good cause to waive the 30-day delay in the effectiveness of this action under 5 U.S.C. 553(d)(3).

Authority: 16 U.S.C. 1801 et seq.

Dated: August 29, 2016.

SUPPLEMENTARY INFORMATION:
Regulations implemented under the authority of the Atlantic Tunas Convention Act (ATCA; 16 U.S.C. 971 et seq.) and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 et seq.) governing the harvest of NALB and BFT by persons and vessels subject to U.S. jurisdiction are found at 50 CFR parts 635. Section 635.27(e) describes the NALB annual quota recommended by ICCAT and the annual NALB quota adjustment process. Section 635.27(a) subdivides the ICCAT-recommended U.S. BFT quota among the various domestic fishing categories, per the allocations established in the 2006 Consolidated Atlantic Highly Migratory Species Fishery Management Plan (2006 Consolidated HMS FMP) (71 FR 58058, October 2, 2006), as amended by Amendment 7 to the 2006 Consolidated HMS FMP (Amendment 7) (79 FR 71510, December 2, 2014), and describes the annual BFT quota adjustment process. NMFS is required under ATCA and the Magnuson-Stevens Act to provide U.S. fishing vessels with a reasonable opportunity to harvest the ICCAT-recommended quotas.

The NALB quota implementation and quota adjustment processes, along with the BFT quota adjustment process, were previously analyzed in Amendment 7, which included a Final Environmental Impact Statement, Final Regulatory Impact Review, Final Regulatory Flexibility Analysis, and Final Social Impact Review, Final Regulatory Flexibility Analysis, and finally the Final Environmental Impact Statement, Final Regulatory Impact Review, and Final Social Impact Review, Final Regulatory Flexibility Analysis for that action. The annual U.S. NALB quota of 527 mt is codified at § 635.27(e) and will remain in effect until changed (for instance, if a new ICCAT NALB TAC recommendation is adopted). Because ICCAT adopted TACs for 2014, 2015, and 2016 in Recommendation 13–05, NMFS currently anticipates that these annual base quotas would be in effect through 2016, but they will remain in place unless and until a new NALB TAC and catch limits are adopted by ICCAT. Amendment 7 established the process by which NMFS adjusts the U.S. annual NALB quota implementation and quota adjustment processes, along with the BFT quota adjustment process, were previously analyzed in Amendment 7, which included a Final Environmental Impact Statement, Final Regulatory Impact Review, Final Regulatory Flexibility Analysis, and Final Social Impact Review, Final Regulatory Flexibility Analysis, and finally the Final Environmental Impact Statement, Final Regulatory Impact Review, and Final Social Impact Review, Final Regulatory Flexibility Analysis for that action. The annual U.S. NALB quota of 527 mt is codified at § 635.27(e) and will remain in effect until changed (for instance, if a new ICCAT NALB TAC recommendation is adopted). Because ICCAT adopted TACs for 2014, 2015, and 2016 in Recommendation 13–05, NMFS currently anticipates that these annual base quotas would be in effect through 2016, but they will remain in place unless and until a new NALB TAC and catch limits are adopted by ICCAT. Amendment 7 established the process by which NMFS adjusts the U.S. annual NALB quota implementation and quota adjustment processes, along with the BFT quota adjustment process, were previously analyzed in Amendment 7, which included a Final Environmental Impact Statement, Final Regulatory Impact Review, Final Regulatory Flexibility Analysis, and Final Social Impact Review, Final Regulatory Flexibility Analysis, and finally the Final Environmental Impact Statement, Final Regulatory Impact Review, and Final Social Impact Review, Final Regulatory Flexibility Analysis for that action. The annual U.S. NALB quota of 527 mt is codified at § 635.27(e) and will remain in effect until changed (for instance, if a new ICCAT NALB TAC recommendation is adopted). Because ICCAT adopted TACs for 2014, 2015, and 2016 in Recommendation 13–05, NMFS currently anticipates that these annual base quotas would be in effect through 2016, but they will remain in place unless and until a new NALB TAC and catch limits are adopted by ICCAT. Amendment 7 established the process by which NMFS adjusts the U.S. annual
NALB quota for any previous year’s underharvest. NMFS makes such adjustments consistent with ICCAT limits and when complete catch information for the prior year is available and finalized.

**Adjustment of the 2016 NALB Quota**

Based on NMFS’ best available information as of July 21, 2016, the total 2015 NALB catch is 247.70 mt, which is 293.61 mt less than the 2015 adjusted quota (i.e., 527 mt plus 14.31 mt of 2014 underharvest carried forward to 2015, totaling 541.31 mt). Thus, the underharvest for 2015 is 293.61 mt. Per the 2013 ICCAT recommendation, only 25 percent of the total 2015 U.S. quota, or 131.75 mt, of that underharvest may be carried forward to the 2016 fishing year. Consistent with the process established in Amendment 7, the adjusted 2016 NALB quota is 527 mt plus 131.75 mt, totaling 658.75 mt.

**BFT Annual Quota and Adjustment Process**

Pursuant to Amendment 7, NMFS augments the Reserve category quota to the extent that underharvest from the prior year’s adjusted U.S. BFT quota is available. NMFS makes such adjustments consistent with ICCAT limits and when complete catch information for the prior year is available and finalized. Consistent with the BFT quota regulations, NMFS may allocate any portion of the Reserve category quota for inseason or annual adjustments to any fishing category quota pursuant to regulatory determination criteria described at § 635.27(a)(8), or for scientific research.

NMFS implemented ICCAT Recommendation 14–05 in the BFT quota final rule in August 2015 (80 FR 52198, August 28, 2015). That rulemaking implemented Recommendation 14–05, which included a 2,000-mt western BFT TAC of 2,000 mt (for 2015 and 2016) and the recommended annual U.S. baseline quota of 1,058.79 mt. The total annual U.S. quota, including the 25 mt to account for bycatch related to pelagic longline fisheries in the Northeast Distant gear restricted area (NED) is 1,083.79 mt. The maximum underharvest that a Contracting Party may carry forward from one year to the next is 10 percent of its total quota.

The baseline annual U.S. BFT quota of 1,058.79 mt is codified at § 635.27(a) and will remain in effect until changed (for instance, if a new ICCAT western BFT TAC recommendation is adopted). Because ICCAT adopted TACs for 2015 and 2016 in Recommendation 14–05, NMFS currently anticipates that these adjustments would be in effect through 2016, but they will remain in place unless and until a new western BFT TAC and catch limits are adopted by ICCAT.

**Adjustment of the 2016 BFT Reserve Category Quota**

Based on NMFS’ best available information as of July 21, 2016, the total 2015 BFT catch is 896.30 mt. This total catch includes 676.80 mt of landings and 199.50 mt of dead discards, which includes the best available estimate of 14.60 mt of dead discards for the pelagic longline fishery and the observed dead discards of 4.90 mt for the purse seine fishery. The total catch of 896.30 mt is 282.36 mt less than the quota available for 2015 landings and dead discards (i.e., 1,083.79 mt plus 94.87 mt of 2014 underharvest carried forward to 2015, totaling 1,178.66 mt). Thus, the underharvest for 2015 is 282.36 mt. Per the 2014 ICCAT recommendation, only 10 percent of the total 2015 U.S. quota, or 108.38 mt, of that underharvest may be carried forward to the 2016 fishing year. The codified Reserve category quota is 24.8 mt. Consistent with the process established in Amendment 7, NMFS augments the Reserve category quota with 108.38 mt in this action. Effective January 1, 2016, NMFS adjusted the Reserve category quota for 2016 to 92.2 mt by reallocating 101.4 mt of Purse Seine quota to the Reserve category (based on 2015 catch by Purse Seine category participants and provisions for calculating Purse Seine allocations in Amendment 7) and also transferring 34 mt of Reserve category quota to the Longline category (81 FR 19, January 4, 2016). Thus, as of the effective date of this action (September 1, 2016), the adjusted 2016 Reserve category quota will be 200.58 mt (i.e., 92.2 mt plus 108.38 mt).

**Classification**

The Assistant Administrator for NMFS (AA) has determined that this final rule is consistent with the Magnuson-Stevens Act, the 2006 Consolidated Atlantic HMS FMP and its amendments, ATCA, and other applicable law.

The AA finds that it would be unnecessary and contrary to the public interest to provide prior notice of, and an opportunity for public comment on, this action for the following reasons:

NMFS solicited and accepted public comment on the NALB quota implementation and quota adjustment processes, along with the BFT quota adjustment process, as part of the Amendment 7 rulemaking. Comments on these provisions in response to the proposed Amendment 7 rulemaking were generally supportive and were addressed in the Response to Comments section of the Amendment 7 final rule. (See comments 18, 19, and 105 at 79 FR 71530–71531 and 71553.) This action applies the formula noticed to the public in the earlier action (Amendment 7), using the best available data regarding 2015 catch and underharvest and calculating allowable underharvest consistent with ICCAT recommendations. The Amendment 7 rulemaking specifically provided prior notice of, and accepted public comment on, these formulaic quota adjustment processes and the manner in which they occur. The application of this formula in this action does not have discretionary aspects requiring additional agency consideration and thus public comment for this action would not and could not result in any changes.

There is good cause under U.S.C. 553(d)(3) to waive the 30-day delay in effective date and make the rule effective upon publication in the Federal Register. The fisheries for NALB and BFT began on January 1, 2016. NMFS monitors NALB and BFT annual catch against the available quota. Delaying the effective date of these quota adjustments would unnecessarily complicate the management of the NALB and BFT fisheries, which rely on management flexibility to respond quickly to fishery conditions to ensure that fishermen have a reasonable opportunity to catch the available quota. For example, under the NALB fishery closure regulations, fishermen must close the fishery when the annual fishery quota is reached. Closure of the fishery based only on the baseline (codified) quota versus the adjusted NALB quota would preclude the fishery from harvesting NALB that are legally available consistent with the ICCAT recommendations and the 2006 Consolidated HMS FMP, as amended. Adjusting the BFT Reserve category as soon as possible provides NMFS the flexibility to transfer quota from the Reserve to other fishing categories inseason after considering the regulatory determination criteria, including fishery conditions at the time of the transfer. NMFS could not appropriately adjust the annual quotas for 2016 sooner because the data needed to make the determination only became available in late July and additional time was needed for agency analysis and consideration of the data.

Additionally, to prevent confusion and potential overharvests, these adjustments should be in place as soon as possible to allow the impacted sectors to benefit from any subsequent
quota adjustments to the fishing categories, give them a reasonable opportunity to catch available quota, and provide them the opportunity for planning operations accordingly. This action is being taken under §§ 635.27(e) and 635.27(a)(10) and is exempt from review under Executive Order 12866. This final rule does not contain a collection-of-information requirement for purposes of the Paperwork Reduction Act. Because prior notice and opportunity for public comment are not required for this rule by 5 U.S.C. 553, or any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601 et seq., are inapplicable. Authority: 16 U.S.C. 971 et seq. and 1801 et seq.

Samuel D. Rauch III, Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

[Docket No. 140904754–5188–02]
RIN 0648–BG27
Magnuson-Stevens Act Provisions; Fisheries Off West Coast States; Pacific Coast Groundfish Fishery; 2015–2016 Biennial Specifications and Management Measures; Inseason Adjustments

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule; inseason adjustments to biennial groundfish management measures.

SUMMARY: This final rule announces inseason changes to management measures in the Pacific Coast groundfish fisheries. This action, which is authorized by the Pacific Coast Groundfish Fishery Management Plan (PCGFMP), is intended to allow fisheries to access more abundant groundfish stocks while protecting overfished and depleted stocks.

DATES: This final rule is effective September 1, 2016.

Background

The Pacific Fishery Management Council (Council)—in coordination with the Pacific Coast Treaty Indian Tribes and the States of Washington, Oregon, and California—recommended changes to groundfish management measures at its June 21–28, 2016, meeting. Specifically, the Council recommended taking a portion of the Pacific ocean perch (POP) initially deducted from the annual catch limit (ACL) and making it available to the mothership (MS) sector; a trip limit increase for black rockfish in the limited entry fixed gear (LEFG) and open access (OA) fisheries in northern California; and trip limit reductions in the OA sablefish daily trip limit (DTL) fishery north of 36° N. lat.

Transferring POP to the Mothership Sector

As part of biennial harvest specifications and management measures, ACLs are set for non-whiting groundfish species, deductions are made “off-the-top” from the ACL to account for various sources of mortality (including scientific research activities) and the remainder, the fishery harvest guideline, is allocated among the various groundfish fisheries. The limited availability of overfished species that can be taken as incidental catch in the Pacific whiting fishery, particularly darkblotched rockfish, POP, and canary rockfish, led NMFS to implement sector-specific allocations for these species to the Pacific whiting fisheries. If the sector-specific allocation for a non-whiting species is reached, NMFS may close one or more of the at-sea sectors automatically, per regulations at § 660.60(d).

At the Council’s June meeting, MS and catcher/processor (C/P) sectors requested more POP to accommodate higher than anticipated harvest and prevent closure of the fishery prior to harvesting their allocations of Pacific whiting.

At the start of 2016, the MS and C/P sectors of the Pacific whiting fishery were allocated 7.2 mt and 10.2 mt of POP respectively, per regulations at § 660.55(c)(1)(i)(B). According to the best fishery information available at the June 2016 meeting, POP bycatch in the MS sector was approximately double 2016 POP bycatch projections. At that time, best available information regarding bycatch rates of POP in the MS sector indicated that if those rates continued, only 53 percent (38,246 mt) of the Pacific whiting allocation would be harvested by the end of the 2016 fishery. Therefore, the Council recommended that NMFS monitor fishery harvest of Pacific whiting and POP relative to their respective at-sea sector allocations, update projections of Pacific whiting allocation attainment based on new, updated POP bycatch rates, and if necessary, transfer some POP that would otherwise go unharvested to either the MS or C/P sectors as needed.

Current projections by the Northwest Fishery Science Center indicate that approximately 3.7 mt of POP off-the-top deductions for scientific research would remain unharvested through the end of the year. As of August 11, 2016, the C/P sector has only harvested approximately 4.1 percent (0.41 mt) of its 2016 POP allocation indicating the C/P sector has sufficient POP allocation to cover their Pacific whiting harvests. However, approximately 70 percent (5.0 mt) of the total MS sector POP allocation has been harvested and only approximately 47 percent (34,256.46 mt) of the Pacific whiting allocation has been harvested. Using the most recent catch data through August 11, 2016, NMFS projects that at current rates, the MS sector will only harvest approximately 49 percent (35,486.35 mt) of its total Pacific whiting allocation (74,415 mt) before reaching the 7.2 mt POP allocation. Therefore, consistent with the Council’s June recommendation to take into account the best estimates of the amount of POP available and the updated bycatch rates in the MS and C/P fisheries, NMFS is transferring 3.0 mt of POP to the at-sea sectors.

This rule transfers 3.0 mt of POP that is expected to go unharvested from the scientific research off-the-top deduction to the MS sector. This transfer increases the MS sector POP allocation from 7.2 mt to 10.2 mt. The remaining amount in the off-the-top deduction for scientific research is anticipated to go...
