

METHODOLOGY REVIEW PROCESS AND
PRELIMINARY TOPIC SELECTION FOR 2013

Each year, the Scientific and Statistical Committee (SSC) completes a methodology review to help assure new or significantly modified methodologies employed to estimate impacts of the Council's salmon management use the best available science. The process normally involves: developing a list of potential topics for review at the April Council meeting; development of analytical materials to be reviewed between April and September Council meetings; final selection of review topics at the September Council meeting; review of selected topics in October by the SSC Salmon Subcommittee and the Salmon Technical Team (STT); and review by the full SSC at the November Council meeting. This review process is preparatory to the Council's adoption, at the November meeting, of all proposed changes to be implemented in the coming season or, in certain limited cases, providing directions for handling any unresolved methodology problems prior to the formulation of salmon management options in March. Because there is insufficient time to review new or modified methods at the March meeting, the Council may reject their use if they have not been approved the preceding November.

The SSC will receive input from the STT and the Model Evaluation Workgroup, and provide recommendations for methodologies to be reviewed in 2013.

Council Task:

- 1. Provide guidance to the SSC regarding potential topics and priorities for methodologies to be reviewed in 2013.**
- 2. Request relevant agencies develop and provide needed materials to the SSC, as appropriate.**
