

## HABITAT COMMITTEE REPORT ON ATLANTIS MODEL REVIEW REPORT

The Habitat Committee (HC) received a presentation on the Atlantis model. The HC supports the comments of the Methodology Review Panel (Agenda Item H.1.a, Attachment 1). We reiterate the Methodology Review Panel's recommendation to improve analysis of uncertainty in model results. We support further development of scenarios that incorporate explicit habitat factors. For example, habitat is not yet modeled with great resolution in Atlantis, limiting its usefulness in the development of habitat-based management scenarios. Additionally, the HC supports the further development of the Atlantis model in evaluating climate change scenarios in the context of sustainable fisheries management strategies.
