

## SEQUENCE OF EVENTS AND STATUS OF FISHERIES

Situation: A summary of the management events for the 1999 salmon season (through June 15) is contained in Attachment D.1.a. Since the March Council meeting, the National Marine Fisheries Service (NMFS) has convened only one conference to consider inseason management needs. That conference (inseason conference number two) made modifications to the April commercial test fisheries off California south of Pillar Point.

Dr. Robert Kope, chairman of the Salmon Technical Team, will provide detailed effort and harvest data in his report to the Council.

**Council Action: None.**
