

IDENTIFICATION OF MANAGEMENT OBJECTIVES AND  
PRELIMINARY DEFINITION OF 2001 OPTIONS

Situation: Using the Salmon Advisory Subpanel (SAS) management recommendations as a base, the Council should identify the range of management elements in the options for public review (harvest ranges, special restrictions, and basic season structure). The Salmon Technical Team (STT) will attempt to collate the Council's identified management elements into coordinated coastwide options. The collated options will be returned to the Council for review and tentative adoption on Wednesday, March 7, 2001 followed by STT analysis and final adoption of the options on Friday, March 9, 2001. Exhibit B.4, Attachment 1 provides guidance for developing and assessing the options.

Before defining the options, the Council should be briefed on any pertinent management constraints resulting from: actions by the Pacific Salmon Commission, recommendations of the Klamath Fishery Management Council, action by the California Fish and Game Commission to set the allocation of Klamath River fall chinook for the inside recreational fishery, and constraints for stocks listed under the Endangered Species Act.

Any option considered for adoption which deviates from fishery management plan (FMP) objectives will require implementation by emergency rule. If an emergency rule appears to be necessary, the Council must clearly identify and justify the need for such an action consistent with emergency criteria established by the Council (Exhibit B.4, Attachment 2).

**Council Action: Using the SAS proposals and other agency and public input, define basic management elements and alternatives for STT collation into coastwide management options.**
