Subject: New Halibut Rules

Date: Sun, 24 Mar 2002 13:43:39 -0800

From: "Don&Susan" <nordy@olympen.com>

To: <pfmc.comments@noaa.gov>

As an active sport Halibut fisherman and a manufacture of deep sea halibut tackle, I feel that the new reg's that are being considered are addressing the sole feelings of the Charter Boat industry and not tacking the Sport Boat fisherman into account. I fish in area 3 and the way the weather has gone the last two years there has been some bad storms during early parts of the previous seasons which have kept the small boats off the water. That meant that the larger Charters made it out to the fish and us small boaters either didn't go out or were taking a risk to be able to get some fishing time. This last season when I made it out to the "HOT SPOT", as referred to in your news releases, there were more charter's than sport boats. This means that the bulk of the fish taken at the "HOT SPOT" were done so by the Charter's. The bulk of these boats came from Neah Bay where the most lobby pressure is. With the change of the closure this will take away the only close [22 mile] Halibut fishing access to LaPush that I know of at this time. I want you to know that I have actively fished out of this port since 1963 and my dad fished out of LaPush from 1947 till he moved from the area in 1962. I also want you to know that this "HOT SPOT" was first visited by a few small boaters from LaPush of which I was one of. We tried to not over fish this small area and not hurt the Yellow Eye population but as in all cases the word got out and when the charters learned of the "HOT SPOT" they moved in. Now it seems they are the ones that have put the screws to the sport boaters again. I urge you to concenter this Info in your future decisions for Area 3 both now and in the future.

*I believe we got
more than one of those*

PROPOSED 2002 INCIDENTAL CATCH REGULATIONS FOR THE SALMON TROLL AND FIXED GEAR SABLEFISH FISHERY

Situation: Regulations governing the incidental harvest of halibut in the non-Indian commercial troll salmon fishery and the primary, limited entry longline sablefish fishery north of Point Chehalis require the Council to adopt recommended halibut landing restrictions to allow incidental harvest while assuring the quotas are not exceeded. At the March meeting the Council adopted options for both the salmon troll fishery and the sablefish fishery for public review. Options within both the salmon and sablefish fisheries include closing and extending the "halibut hotspot" area during times halibut retention is allowed.

The halibut hotspot is an area off the Washington coast (within a rectangle defined by these four corners: 48°18' N latitude/125°11' W longitude, 48°18' N latitude/124°59' W longitude, 48°04' N latitude/125°11' W longitude, and 48°04' N latitude/124°59' W longitude) approximately 20 miles south of Cape Flattery that is closed to recreational halibut fishing under the Area 2A Halibut Catch Sharing Plan. The Washington Department of Fish and Wildlife (WDFW) has received information from the recreational charter boat fleet that fisheries operating adjacent to this area incidentally encounter yelloweye rockfish at a relatively high frequency. Given the extremely low optimum yield for yelloweye rockfish and the need to control all sources of fishing-related mortality, the Council is considering extending the hotspot closure 4 additional miles to the south (to 48°00' N latitude) and including potential commercial non-Indian incidental halibut fisheries in the closure. WDFW is scheduled to report on the potential for yelloweye rockfish bycatch in fisheries operating in the affected area and recommend a management strategy for decreasing this bycatch under agenda item E.12.

Salmon Troll Fishery

The Council adopted for public review two options for landing restrictions for Pacific halibut caught incidentally in the May/June troll season:

- Option 1: Status quo: License holders may land no more than 1 halibut per each 3 chinook, except 1 halibut may be landed without meeting the ratio requirement, and no more than 35 halibut may be landed per trip. Halibut retained must be no less than 32 inches in total length (with head on).
- Option 2: License holders may land no more than 1 halibut per each 5 chinook, except 2 halibut may be landed without meeting the ratio requirement, and no more than 35 halibut may be landed per trip. Halibut retained must be no less than 32 inches in total length (with head on).
- Option 3: In combination with either Option 1 or 2 above, close the halibut "hotspot" area, as defined in the Pacific Council Catch Sharing Plan in Washington Marine Area 3; and extend the closure south to 48°00'00" for protection of yelloweye rockfish. This closure would be in effect during periods open to retention of halibut.

The primary objective for the annual landing restrictions is to harvest the incidental halibut quota in the May/June salmon troll fishery, and a secondary objective is to harvest any remaining quota during July through September.

Commercial Sablefish Fishery North of Point Chehalis

The Council adopted for public review two options for landing limits on incidental halibut harvest in the fixed gear primary sablefish fishery north of Point Chehalis:

- Option 1a: Restrict incidental halibut landings to ~~80~~¹⁵⁰ pounds (dressed weight) of halibut for every 1,000 pounds (dressed weight) of sablefish landed and up to two additional halibut in excess of the 80 pounds per 1,000 pound ratio per landing. Retention of halibut allowed beginning May 1.
- Option 1b: Restrict incidental halibut landings to ~~200~~¹⁵⁰ pounds (dressed weight) of halibut for every 1,000 pounds (dressed weight) of sablefish landed and up to two additional halibut in excess of the 200 pounds per 1,000 pound ratio per landing. Retention of halibut allowed beginning May 1.

Option 2: In combination with either Option 1a or 1b above, restrict incidental halibut landings to a trip limit of 1,000 pounds (dressed weight) of halibut.

Option 3: In combination with either Option 1a or 1b above, close the halibut "hotspot" area, as defined in the Pacific Council Catch Sharing Plan in Washington Marine Area 3; and extend the closure south to 48°00'00" for protection of yelloweye rockfish. This closure would be in effect during periods open to retention of halibut.

The objectives for the annual landing restrictions are to reach the halibut allocation at about the same time as the sablefish season ends and to ensure an equitable sharing of the halibut landings among the fishers.

Council Action:

1. **Adopt for implementation by the National Marine Fisheries Service, incidental halibut landing restrictions for the 2002, commercial troll salmon fishery. (MOTIONS MUST BE VISIBLE IN WRITING PRIOR TO VOTE.)**
2. **Adopt for implementation by the National Marine Fisheries Service, incidental halibut landing restrictions for the 2002, primary, limited entry longline sablefish fishery north of Point Chehalis, Washington. (MOTIONS MUST BE VISIBLE IN WRITING PRIOR TO VOTE.)**

Agenda Order:

- a. Agendum Overview
- b. Reports and Comments of Advisory Bodies
- c. Public Comment
- d. **Council Action:** Adopt Final Annual Incidental Halibut Harvest Restrictions

Chuck Tracy

Groundfish Fishery Strategic Plan Consistency Analysis

The groundfish strategic plan calls for minimizing discarded bycatch. The sablefish fishery prior to 2001 discarded halibut, alive or dead, due to low halibut quota levels. Retaining halibut is consistent with minimizing discarded dead halibut bycatch.
