Forum Objectives

This Forum will explore data collection and monitoring, with a focus on catch accounting in commercial, for-hire and private recreational fisheries. Specifically, participants will:

- Identify outcomes and goals of catch accounting, as pathways for providing guidance to the state and federal agencies, regional partners and service providers involved in the design, analysis and/or implementation of catch accounting programs
- Explore the broader context of catch accounting, including the costs associated with scientific and management uncertainty, the benefits of improved accountability, and the importance of accurate and credible fishery dependent data
- Gain exposure to catch accounting challenges, solutions and funding strategies in a range of fisheries
- Evaluate priorities for data timeliness, resolution and other characteristics relative to catch accounting goals, and understand how goals and data collection priorities can inform the development of a catch accounting strategy
- Understand the range of catch accounting strategies, the information each strategy can yield, the ways data sources can be combined, and the characteristics, constraints or challenges of a fishery that make each strategy appropriate
