## Revisions to OFL Contributions for Category 3 Stocks

Methods for estimating Overfishing Limits (OFLs) for category 3 (data-poor and data-limited) stocks were reviewed by the Data-Poor Methodology Review Panel in April 2011. The Scientific and Statistical Committee (SSC) endorsed several catch-based methods, including DepletionCorrected Average Catch (DCAC) and Depletion-Based Stock Reduction Analysis (DB-SRA). In a report to the Methodology Review Panel, the technical team described minor errors in the execution of DCAC and DB-SRA, and presented revised OFL estimates for category 3 stocks to the Panel (PFMC, June 2011; Agenda Item E.2.a, Attachment 6). Following correction of the errors (two priors with correlated random draws, and a mis-specified production function), the Review Panel and SSC found the theoretical basis and implementation of DCAC and DB-SRA to be sound.

Category 3 OFLs from the 2011-12 management cycle that were based on DB-SRA or DCAC are compared to the revised estimates in Tables 1 and 2. The revised DB-SRA estimates also reflect increased Monte Carlo sample sizes ( 5 million samples with replacement) from each OFL and bias-correction distribution, reducing variability due to random sampling error, as noted by the Review Panel (Agenda Item E.2.a, Attachment 6, page 9). Comparisons of yield estimates are based on coast wide OFLs, unless otherwise noted, and have not been allocated to management areas (e.g. North/South of $40^{\circ} 10^{\prime} \mathrm{N}$. latitude).

The change in median DCAC estimates is minor, typically $<1 \mathrm{mt}$ and $<3 \%$ change. The percentage change ( $100 \% \times$ [new-old]/old) in DB-SRA estimates varies (Table 1, Figure 1). This is due, in part, to the revised bias correction distributions, but is also affected by application of the corrected production function to each individual unassessed stock, as well as the removal of correlated draws from two of the prior distributions.

Table 1. Median DCAC estimates (mt) from the 2011-2012 management cycle, compared to revised estimates following the Data-Poor Methodology Review Panel.

| Species (Region) | 2011-2012 <br> median DCAC | Revised <br> median DCAC | Percent <br> Change |
| :--- | :---: | :---: | :---: |
| Gopher rockfish (S. of $34^{\circ} 27^{\prime} \mathrm{N}$. lat.) | 26 | 25.6 | $-1.5 \%$ |
| Squarespot rockfish | 5.9 | 5.8 | $-1.7 \%$ |
| Mexican rockfish | 2.8 | 2.8 | $0.0 \%$ |
| Blackgill rockfish (N. of $40^{\circ} 10^{\prime} \mathrm{N}$. lat.) | 4.7 | 4.7 | $0.0 \%$ |
| Blue rockfish (S. of $34^{\circ} 27^{\prime} \mathrm{N}$. lat.) | 74 | 72.9 | $-1.5 \%$ |
| Blue rockfish (N. of $42^{\circ} \mathrm{N}$. lat.) | 33.1 | 32.3 | $-2.4 \%$ |
| Honeycomb rockfish | 7.8 | 7.7 | $-1.3 \%$ |
| Soupfin shark | 62.4 | 61.6 | $-1.3 \%$ |

Table 2. Median DB-SRA estimates (mt) from the 2011-2012 management cycle, compared to revised estimates following the Data-Poor Methodology Review Panel. Species are grouped into rockfishes, flatfishes, and other fish. Rockfishes are sorted by the percent change.

| Species (Region) | $\begin{gathered} \text { 2011-2012 } \\ \text { median DB-SRA } \end{gathered}$ | Revised median DB-SRA | Percent Change |
| :---: | :---: | :---: | :---: |
| Rosy rockfish | 39.5 | 47.5 | 20\% |
| Olive rockfish | 189.8 | 225.0 | 19\% |
| Stripetail rockfish | 55.9 | 64.0 | 15\% |
| Swordspine rockfish | 12.9 | 14.2 | 10\% |
| Grass rockfish | 56.2 | 60.3 | 7\% |
| Kelp rockfish | 25.9 | 27.7 | 7\% |
| Bocaccio (N. of $40^{\circ} 10^{\prime} \mathrm{N}$. latitude) | 268.2 | 284.0 | 6\% |
| Yellowmouth rockfish | 185.5 | 193.3 | 4\% |
| Brown rockfish | 202.7 | 210.1 | 4\% |
| Black-and-Yellow rockfish | 26.8 | 27.5 | 3\% |
| Treefish | 13.2 | 13.4 | 2\% |
| Greenblotched rockfish | 25.9 | 24.4 | -6\% |
| Redstripe rockfish | 288.9 | 270.4 | -6\% |
| Sharpchin rockfish | 242.5 | 224.4 | -7\% |
| Speckled rockfish | 43.1 | 39.6 | -8\% |
| Rougheye rockfish | 78.7 | 71.5 | -9\% |
| Copper rockfish | 184.6 | 167.5 | -9\% |
| Pink rockfish | 2.8 | 2.5 | -10\% |
| Starry rockfish | 70.5 | 62.6 | -11\% |
| Aurora rockfish | 46.8 | 41.4 | -11\% |
| Silvergray rockfish | 180.6 | 160.0 | -11\% |
| Tiger Rockfish | 1.1 | 1.0 | -12\% |
| Flag rockfish | 26.7 | 23.5 | -12\% |
| Redbanded rockfish | 63.5 | 55.7 | -12\% |
| Bank rockfish | 594.5 | 520.5 | -12\% |
| Vermillion rockfish | 319.5 | 279.0 | -13\% |
| Shortraker rockfish | 22.0 | 18.8 | -14\% |
| Yellowtail rockfish (S. of $40^{\circ} 10^{\prime} \mathrm{N}$. lat.) | 1248.9 | 1064.4 | -15\% |
| Rosethorn rockfish | 17.7 | 15.0 | -15\% |
| Quillback rockfish | 15.0 | 12.8 | -15\% |
| China rockfish | 31.5 | 26.4 | -16\% |
| Cowcod (N. of 34* $27^{\prime} \mathrm{N}$. latitude) | 6.8 | 4.8 | -30\% |
| Bronzespotted rockfish | 6.7 | 3.6 | -45\% |
| Pacific sanddab | 4942.5 | 4801.0 | -3\% |
| Rex sole | 4308.6 | 4371.5 | 1\% |
| Rock sole | 66.0 | 66.7 | 1\% |
| Sand sole | 780.8 | 773.2 | -1\% |
| Kelp greenling (S. of $42^{\circ} \mathrm{N}$. latitude) | 110.6 | 118.9 | 7\% |
| Leopard shark | 164.0 | 167.1 | 2\% |
| Pacific rattail | 1178.1 | 1119.0 | -5\% |

Figure 1. Comparison of DB-SRA estimates (log scale) from 2011-2012 management cycle to revised estimates. Solid line is 1:1.
