I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Mr. Dan Fischbach

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Every year more than 100 sea lions, dolphins and whales die in the California drift gillnet fishery -- each one a good reason to end the use of the deadly gear.

This haphazard and unsustainable swordfish fishery sets mile-long nets, known as “curtains of death,”in coastal waters where endangered sperm whales, leatherback sea turtles and a wide array of marine life swim along California’s shores. As a result, the nets capture far more than swordfish.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chairperson Lowman:

I strongly request that the Pacific Fisheries Management Council (the Council) cease any additional action to expand the drift gillnet fishery for swordfish off the West Coast. I strongly oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or that will increase the excessive bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently, emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks, of which fewer than 1,500 adults survive in the Pacific Ocean. Any sperm whale lost is a critical because as few as 700 are left in the West Coast population.

Please end any efforts to expand the swordfish gillnet fishery before it becomes larger and more destructive. Please begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances, and support sustainable fishing practices.

Thank you for your careful consideration of my my comments.

Sincerely,
Sharon Morris

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Since other areas have ADVANCED, I hope that you will do the same. Let's take care of our ecosystem. I am sure that the Pacific Fisheries Management Council will demonstrate intelligence, understanding of ecosystems , respect for the environment and wildlife and REALIZE that changes can be made without adverse affects to fishermen, but respect for the wildlife that live in the oceans and have rights as well. Sea turtles are an endangered species due to human ignorance. Let's do our best to be good stewards of the Earth.

Thank you for showing initiative.

Sincerely
Anne Kaufmann

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:
It seems that many factors are throwing our oceans into turmoil, jeopardizing the survival of many species. At least by banning gill nets, you can influence a positive influence by not killing some of our most majestic marine animals.I I am w
riting to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Shari Sinclair

Baltimore, MD 21218

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. I oppose weakening the Pacific Leatherback Conservation Area. This protected area WORKS, and has observably reduced entanglements of endangered leather-back sea turtles to TWO over the past decade. The Council must vote 'No' on any proposals that would allow more gillnet fishing in leather-back habitat. We must NOT increase the already dangerously high by-catch in this unpopular, unsustainable swordfish fishery.

Drift gill-nets have been banned in the open ocean and along most of the U.S. West Coast because of high by-catch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish. Stop this egregious practice; preserve our precious marine mammal lives!

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gill-net fishery. Any actions to increase gill-net fishing will risk the capture and death of critically endangered leather-backs of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gill-net fishery! Further, I urge you to begin to phase out the drift gillnet fishery along our coast, to permanently ban long-lining under any circumstances, and to support sustainable fishing practices that do not compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Gill net fishing is indiscriminate catching and killing many harmless species. Please ban this practice. We need to preserve our oceans and not needlessly kill undesireable animals.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

David Wood

Cape Town, ot 7304

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

We are scuba diver, recreational fishermen and ardent conservationists. We are on the water all of the time and see first hand the ravages of pelagic and weighted gill nets Gill nets are non-selective walls of death with an unacceptable and irresponsible level of by-catch, which includes many protected and endangered species. Allowing gill nets is tantamount to ignoring the current laws protecting these protected and endangered species.

Please use your leadership powers to halt the deployment of gill nets. The Pacific Fisheries Management Council must be told to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. Infact curbs for gillnets need to be expanded!!! Turtles and other precious marine animals entangled by these nets are being killed and tossed back into the ocean.

Sincerely,

Larry and Marie Brown

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

Please work to enforce protections on endangered species. The allowance of gill nets in the critical habitats of endangered marine megafauna is a violation of the endangered species act. These large animals are key players in marine ecosystems and their loss is disproportionately detrimental. We should protect and cherish the wealth of biological diversity around us for countless reasons. If you are not swayed by the obvious aesthetical and moral arguments, please at least consider the ecomomic benefit these animals will bring to our country in the long term through tourism and ecosystem functions in comparison to the ephemeral economic contribution through the killing of swordfish.

Thanks for your consideration.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

I continue to be shocked and upset by the methods humans create and continue to utilize to obtain money, regardless of the death and harm we cause to the planet and it's nonhuman co inhabitants. How would you like it if some predator caught you in a net and killed you for no reason. It does not serve as a benifit to anyone. If people are smart enough to make nets, surely they can create a net that does not have to destroy species other than their target prey. People don't own the planet or have the right to destroy it and everything living on it.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which fewer than 1,500 adults survive in the entire Pacific. Every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

The populations of aquatic animals are declining at an alarming rate, changing the balance of nature worldwide. If all animals killed were used to feed the world human populations, these losses would not be justified; however, the insult is so much worse because much of the catch is killed and dumped back into the oceans as bycatch. Gillnet and long-line fishoing should be banned world wide, but it is especially important to ban them in areas where endangered species are known to congregate.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The collateral damage these nets cause is devastating to our oceans. I want to teach my newborn son about the worlds oceans & their beauty through showing him, not just telling him about what used to be. Species like turtles, whales & dolphins which get caught in these nets are too precious to lose. Please help me ban these destructive and unnecessarily harmful nets.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to show the wisdom and foresight to halt any and all action to expand the wanton drift gillnet fishery for swordfish off the West Coast.

I especially, vehemently oppose the irresponsible attempt to weaken the Pacific Leatherback Conservation Area, which has proven a godsend in reducing observed entanglements of severely endangered leatherback sea turtles to two over the past decade.

In an era when ‘unsustainable overfishing’ and ‘bycatch’ have finally become dirty words, the Council must vote ‘No’ on any proposals that would allow more deadly gillnet fishing in leatherback habitat or that would further increase the too-high bycatch proportions in this UNpopular, UNsustainable swordfish fishery.

Drift gillnets have been very rightly banned in the open ocean and along most of the U.S. West Coast, because of their cruelly wanton bycatch of marine life, including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and tragically drowned in the California drift gillnet fishery. ENOUGH IS ENOUGH - just how stupid and selfish do we have to be?!

Any of the proposed, selfish actions to increase gillnet fishing will irresponsibly risk even more unforgiveable entanglements and deaths of critically endangered leatherbacks, of which less than 1,500 adults survive in the entire Pacific basin! As few as 700 sperm whales remain in the West Coast population, so every single sperm whale we so carelessly kill tears an irreplaceable hole in the already too-tattered web of marine life.

For all these reasons, I call on you to STOP any and all efforts to expand the swordfish gillnet fishery before this selfish stupidity causes any more needless deaths. Instead, concerned citizens demand that the drift gillnet fishery along our coast is finally and immediately prohibited, that longlining under any circumstances is permanently banned and that sustainable fishing practices that refuse to compromise the health of endangered species, fisheries and our oceans are finally given the uncompromising support they deserve.

Thank you for your time and consideration of my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. And every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For the reasons above, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances, and support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.
