I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Jeanne Scott

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Before the canned text, the issue for me is that we have to be wise stewards of the ocean and preserve its health in order to feed the billions who now and far into the future are depending on it as a food source. Drift gillnets are the antithesis of wise stewardship.

Take a stand! Take a step toward a world where gillnets are a historical footnote. And now the boilerplate:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

As a long time California resident and one who values the riches of our coastline, I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I strongly urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any /all circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing with a certain degree of despair and desperation to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. I

n particular, I strongly and most vehemently oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow ANY more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

I am sure that you are aware that drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I ask you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban long-lining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our our already maximally stressed oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘NO’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

It is clear that these practices must be stopped immediately if we are to not have more "passenger pigeon" issues. Surely you do not wish to be remembered as the cause of the demise of so many species.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Mr. Chairman:

I urge you, as Chairman of the Pacific Fisheries Management Council (the Council), to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. I ask the Council to definitely vote 'No' on any proposals allowing more gillnet fishing in leatherback habitat or increasing the high bycatch in this unpopular, unsustainable swordfish fishery!

As you must know, drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life -- including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. It is inevitable that any action to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific! This is absolutely unbelievable and unforgivable! As few as 700 sperm whales are left in the West Coast population!

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently banning longlining under any circumstances and supporting sustainable fishing practices that do not compromise the health of endangered species, fisheries and our oceans.

Thank you very much for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

That is so unbelieveably sad to see that our beautiful sperm whales (what we have left) and the leatherbacks (which are getting extinct too) and our ocean creatures that do not need to die in such a horrible way. Please Please PHASE OUT the drift gillnet fishery ALLTOGETHER under any circumstances.
Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

The majority of the current fisheries methods are not sustainable or conservation oriented.. please do whats right and change this.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to STRONGLY urge the Pacific Fisheries Management Council (the Council) to HALT ANY further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I OPPOSE weakening the Pacific Leatherback Conservation Area that has REDUCED observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote 'NO' on ANY proposals that would allow MORE gillnet fishing in leatherback habitat or INCREASE the HIGH bycatch in this unpopular, UNSUSTAINABLE swordfish fishery.

Drift gillnets have been BANNED in the open ocean AND along MOST of the U.S. West Coast because of HIGH bycatch of marine life, including endangered whales, dolphins, sea turtles, shark, tuna, and other non-target fish.

Recently, EMERGENCY regulations were IMPOSED after two endangered sperm whales were entangled and KILLED in the California drift gillnet fishery. ANY actions to INCREASE gillnet fishing will risk the CAPTURE and DEATH of CRITICALLY endangered leatherbacks, of which LESS than 1,500 adults survive in the ENTIRE Pacific. ANY and EVERY sperm whale LOST is a problem because as FEW as 700 are left in the West Coast population.

For these reasons, I STRONGLY urge YOU to STOP ANY and ALL efforts to EXPAND the swordfish gillnet fishery before it goes ANY farther. Instead, I STRONGLY urge YOU to begin to PHASE OUT the drift gillnet fishery along our coast, PERMANENTLY ban longlining under ANY circumstances and to SUPPORT sustainable fishing practices that do NOT compromise the health of endangered species, fisheries, and our oceans.

Thank you for considering my comments.

Oceans are important both for our economy and for biodiversity.
Unsustainable fishery brings long term damage to our economy because it seriously threatens survival of populations of marine animals, many of which could be used for sustainable fishery and bring sustainable profit for decades to come.
It also seriously threatens survival of some endangered species.
There is a growing concern among people for oceans and its wildlife. If more species become endangered or extinct it will create discontent among people, which could seriously grow as the damage to oceans become more intense and irreversible.

If we preserve the oceans, not only do we secure the profit from sustainable fishery for the future, but also we allow development of ecotourism and environmental education of our children.
It is also possible that some important medications, and other aplications will be discovered by studing marine wildlife.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Jaimie Gowatsky

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

We are writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, we oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, we urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, we urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering our comments.

Through Ms. Hellstroem we sign

Sincerely,

Mr and Mrs Johan and Elsie Pasanen
Mr and Mrs Peter and Heli Pasanen
Mr and Mrs Ove and Monic Eldsater
Mr and Mrs Hans and Leena Erdmann
Mr and Mrs Folke and Ann Dage
Mr and Mrs Mikael and Anneli Pasanen
Mr and Mrs Gerth and Gun Andersson
Ms Iréne Wikstrom
Mr Arne Soderblom

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

IT appears that drift gillnets are inappropriate tools in any fishery which can remain sustainable over time.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery.

Because these gillnets cannot be managed to prevent either whale or at-risk sea turtles, this style of net must be banned by California.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific.

THe fact that Leatherbacks are critically endangered requires the Commission to rule against the use of gillnets in waters under jurisdiction.

Every sperm whale lost is a problem because as few as 700 are left in the West Coast population. THese whales have never yet recovered from the overexploitation of the 1700s and 1800s, and killing one is still a tragic loss.

For these reasons, I urge you to end all efforts to expand the swordfish gillnet fishery.

I urge you to END the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

"Injustice anywhere is a threat to justice everywhere." -Dr. Martin Luther King ,

Author C. David Coates wrote an eye opening poem which, like a mirror, exposes us to truths we may not wish to see. "Aren't humans amazing? They kill wildlife - birds, deer, all kinds of cats, coyotes, beavers, groundhogs, mice and foxes by the million in order to protect their domestic animals and their feed. Then they kill domestic animals by the billion and eat them. This in turn kills people by the million, because eating all those animals leads to degenerative - and fatal - health conditions like heart disease, stroke, kidney disease , and cancer. So then humans spend billions of dollars torturing and killing millions more animals to look for cures for these diseases. Elsewhere, millions of other human beings are being killed by hunger and malnutrition because food they could eat is being used to fatten domestic animals. Meanwhile, few people recognize the absurdity of humans, who kill so easily and violently, and once a year send out cards praying for 'Peace on Earth.'"

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman,

After reading and researching the subject of gillnet fishing, I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery - this is disgraceful! Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

A fishery should not have the right to kill countless, innocent marine life such as Turtles, Dolphins, whales and sea lions just so they can cast their nets to catch swordfish. The Pacific Fisheries Management Council (the Council) must halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.
