I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Pacific Fisheries Management Council (the Council): halt any action to expand the drift gillnet fishery for swordfish off the West Coast

Weakening the Pacific Leatherback Conservation Area has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat OR increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life.

Emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery!

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive. And every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

So, considering all of this, stop any and all efforts to expand the swordfish gillnet fishery NOW. Instead, begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chairwoman Lowman:

Like many American citizens and other people around the world, I am deeply worried about the impact human beings are having on the oceans. No longer can we assume, as many did when I was a child in the 50s and 60s, that the oceans are an endless resource, too vast for mankind to spoil or use up.

Because of this, I urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the US West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans. Surely this is both the practical and morally responsible approach to ocean management. Allowing species to die off is not.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Sammy Low

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the US West Coast.

Drift gillnets are banned in the open ocean and along most of this coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks - of which less than 1,500 adults survive in the entire Pacific - and entanglement and loss of sperm whales - of which as few as 700 are left in the West Coast population.

Instead of allowing expansion of the West Coast drift gillnet fishery, the Council should work to phase it out in favor of sustainable fishing practices which don't risk survival of endangered species.

Thank you for heed to these comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

THE BUTCHERY TAKING PLACE IN OUR OCEANS NEEDS TO BE STOPPED. DRIFT GILL NETTING OF ANY KIND NEEDS TO BE STOPPED. ENDANGERED SEA TURTLES AND MARINE MAMMALS NEED TO BE PROTECTED AT ALL COSTS. MAKE IT HAPPEN!!!

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

PLEASE do the right thing and protect these vitally important creatures!

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Pacific Fisheries Management Council

Dear Chair Lowman:

I urge you to pay attention to the harm that that the gill net fishing is doing to sea life. Please do not allow an expansion of this deadly form of fishing. I would love it if you discontinued this type of fishing, but especially in known habitats of sea turtles. The dolphins, sea lions and whales die a slow and painful death because of this method. Isn't there enough suffering in the world already?
I urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Pacific Fisheries Management Council

Dear Chair Lowman:

GILLNET FISHING is simply irresponsible and quite unnecessary, not to add unsportsmanlike. Sustainable fishing if fishing there must be means to avoid catching species other than target species. Therefore I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

DRIFT GILL NETS ARE DANGEROUS AND CAUSE UNINTENDED DEATHS OF MARINE LIFE. PLEASE STOP THE USE OF THESE NETS.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

As a biologist I am writing to strongly request the Pacific Fisheries Management Council (the Council) to immediately and unequivocally stop any further action to expand the drift gillnet fishery for swordfish off the West Coast.

In particular, I totally oppose any weakening of the protections for the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

The reason drift gillnets have been banned in the open ocean and along most of the U.S. West Coast is because of the high bycatch of marine life, including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population. Moreover any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific.

For these reasons, any and all efforts to expand the swordfish gillnet fishery before it goes any farther must stop. Instead, I urge you to begin to phase out the drift gillnet fishery along the coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and the oceans.

Thank you for considering my comments.

Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

We need less drift gillnet fishing. Relaxing the regulations in the Pacific Leatherback Conservation Area where only two sea turtles have died in nets the last decade doesn't make any sense. It will lead to many marine mammals and sea turtles losing their lives to these nets of horror. It doesn't make any sense to say that since the regulations are working, that they should be weakened. Are you aware of how humans are pushing sea turtles to the brink of extinction and one of the worst offenders are these damn gill nets? Please don't weaken the protections. We need to get rid of these walls of death as way too many non targeted animals die in them.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I urge the Pacific Fisheries Management Council to halt any further expansion of drift gillnet fishing for swordfish off the West Coast. I oppose weakening the protections of the Pacific Leatherback Conservation Area that has greatly reduced observed entanglements of endangered leatherback sea turtles over the past decade. The Council must vote 'No' on any proposals that would allow more gillnet fishing in leatherback habitat. Mile-long gillnets used to catch swordfish obviously gather up way too much bycatch, including endangered whales, dolphins, and endangered sea turtles. This is not a sustainable mode of fishing.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast (e.g. Washington and Oregon) because of this unacceptably high level of bycatch.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which fewer than 1,500 adults remain in the entire Pacific. Similarly, with only about 700 sperm whale left along the west coast, gillnet whale deaths are a huge loss to an endangered species.

Please do the sensible thing and stop all attempts to expand the swordfish gillnet fishery . Instead, I urge you to begin to phase out the drift gillnet fishing along our coast, and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a serious problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Constantine Bogios

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Gina Bates

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Gill nets used to be thought as the most efficient way to fish. We now know that the consequences of using a drift gillnet is most harmful, not only to turtles but to many forms of marine life. Some nets tear and end up pn the bottom of the ocean where they entrap not only fish but many forms of marine life including dolphins. Our marine life is facing enough problems like acidic warming waters and less forage fish, don't add to it.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

We are writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, we oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Every year more than 100 sea lions, dolphins and whales die in the California drift gillnet fishery -- each one a good reason to end the use of the deadly gear.

This haphazard and unsustainable swordfish fishery sets mile-long nets, known as “curtains of death,”in coastal waters where endangered sperm whales, leatherback sea turtles and a wide array of marine life swim along California’s shores. As a result, the nets capture far more than swordfish.

Drift gillnet gear is already banned in Oregon, Washington and on the open ocean.

Yet fishery managers are once again pushing to allow the gillnet fleet back into coastal waters that now shelter endangered sea turtles, whales and dolphins!

We are telling Pacific Fisheries Management Council to vote 'no' on any plan to expand gillnetting along the California coast at its March 2014 meeting in Sacramento. We are taking action by February 12 and urging Council Chair Dorothy Lowman and Council Members to:

End the use of drift gillnet gear in California, and

Halt any further action to expand the California drift gillnet fishery for swordfish off the West Coast into the Pacific Leatherback Conservation Area.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, we urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, We implore you to begin to phase out the drift

gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering our humane comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose any attempt to weaken the protections offered by the Pacific Leatherback Conservation Area. This area has reduced observed entanglements of endangered leatherback sea turtles to just two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the entanglement and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Every sperm whale lost is critical - as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery. Instead, you need to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't result in high bycatch and don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to strongly urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Ms Dorothy Lowman:

I wish to join with others writing to you, to urge that the Pacific Fisheries Management Council (the Council) halt any further action to expand drift gillnet fishery for swordfish off USA's West Coast. Although the balance of this message is in the form of a group letter, I feel VERY strongly about its content, and wish to support the sentiments expressed, and to request that you will please consider this information very carefully and prevent all further drift gillnet fishing.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote 'No' on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Every year more than 100 sea lions, dolphins and whales die in the California drift gillnet fishery -- each one a good reason to end the use of the deadly gear.

This haphazard and unsustainable swordfish fishery sets mile-long nets, known as “curtains of death,”in coastal waters where endangered sperm whales, leatherback sea turtles and a wide array of marine life swim along California’s shores. As a result, the nets capture far more than swordfish.

Drift gillnet gear is already banned in Oregon, Washington and on the open ocean.

am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Drift Gillnet and long-line fishing need to be phased out to protect the threatened and endangered ocean species that are currently by-catch in these unsustainable fishing methods.
Thank you for considering my comments.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade.

The creatures in the waters are a creation and gift from GOD. We should not over-fish, nor should we accept horrible levels of needless deaths due to bycatch.

We must fish wisely, and not waste or kill too many unwanted and un-needed sea creatures.

Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Thomas Adamski
17 Council Dr

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Gillnets are shrouds of death that evacuate the oceans of life. They do not constitute a means of "fishing" as most people would recognize the term. Swallowing a vast realm of the pelagic ecosystem within inescapable netting and drowning countless intelligent, sentient creatures, whose only crime is swimming amidst lucrative swordfish and thresher sharks, is morally profane and offensive to our dignity. You must terminate the use of dillnets in American-governed waters entirely, as a heinous usurpation of our common oceanic treasure by a commercial clique.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade. The Council must vote ‘No’ on any proposals that would allow more gillnet fishing in leatherback habitat or increase the high bycatch in this unpopular, unsustainable swordfish fishery.

Drift gillnets have been banned in the open ocean and along most of the U.S. West Coast because of high bycatch of marine life including endangered whales, dolphins, sea turtles, shark, tuna and other non-target fish.

Recently emergency regulations were imposed after two endangered sperm whales were entangled and killed in the California drift gillnet fishery. Any actions to increase gillnet fishing will risk the capture and death of critically endangered leatherbacks of which less than 1,500 adults survive in the entire Pacific. Any every sperm whale lost is a problem because as few as 700 are left in the West Coast population.

For these reasons, I urge you to stop any and all efforts to expand the swordfish gillnet fishery before it goes any farther. Instead, I urge you to begin to phase out the drift gillnet fishery along our coast, permanently ban longlining under any circumstances and to support sustainable fishing practices that don't compromise the health of endangered species, fisheries and our oceans.

Thank you for considering my comments.

Dorothy Lowman
Pacific Fisheries Management Council

Dear Chair Lowman:

Below is a humane consideration that needs to take place. But,safety is another issue. When I was in the Navy, we had various practice drills off of San Clemente. some sailors and small landing boats got caught in these drift nets. This could have turned pretty bad. WE were very fortunate.

I am writing to urge the Pacific Fisheries Management Council (the Council) to halt any further action to expand the drift gillnet fishery for swordfish off the West Coast. In particular, I oppose weakening the Pacific Leatherback Conservation Area that has reduced observed entanglements of endangered leatherback sea turtles to two over the past decade.
