Dorothy Lowman, Chair
Pacific Fishery Management Council
7700 N.E. Ambassador Place, Suite 101
Portland, OR 97220-1384

RE: Agenda Item E.4 – Unmanaged Forage Fish Protection Final Action

Dear Chair Lowman and Members of the Council:

The Pew Charitable Trusts has collected 2,952 comments in support of the Council's final action this March to protect unmanaged forage fish through the adoption of a Final Preferred Alternative that prohibits new directed fishing on seven groups of currently unfished forage species absent robust prior review.

Please include the attached petition as an electronic submission on the web site for the Council's supplemental briefing book. The petition itself is included here, along with the names and cities of individual signers that were gathered as of February 27, 2015. The Council may continue to receive additional comments in the days ahead.

Thank you very much.

Sincerely,

Gilly Lyons
The Pew Charitable Trusts

Dear Chair Lowman and council members,

I greatly appreciate the steady progress the council has made over the past three years to protect forage fish. The science clearly shows—and the public recognizes—that forage fish are the critical middle link in ocean food webs. As you know, the ocean off the West Coast supports valuable commercial and recreational fisheries, as well as ecotourism and other industries that are economic drivers for our coastal communities. Healthy populations of forage fish make all of this possible.

I join thousands of fellow citizens in supporting the council's final action, due in March, to protect currently unmanaged forage fish. This action will designate them as ecosystem component species and ensure that adequate science and management are in place before new commercial fisheries can target them. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Forage fish protection has also received strong support from a variety of stakeholders involved in fisheries management, including commercial and recreational fishermen, processors, environmentalists, and the agencies themselves. Rarely has there been such widespread agreement on a management action, and the council should be applauded for its inclusive, deliberate, and scientific process.

Taking final action in March is essential to maintaining the long-term health of our West Coast marine ecosystem and all the benefits we derive from it. In so doing, the council will fulfill the first initiative of its Fishery Ecosystem Plan, a visionary document intended to guide its implementation of ecosystem-based fishery management. Certainly, protecting forage fish is a great first step.

Thank you for your continued commitment to maintaining a healthy ocean and sustainable fisheries.

Sincerely,

DEANNA ARMSTRONG	Seattle	WA	
ANNIE ASHES	p.t.	WA	
GREGG ASKEY	Vancouver	WA	
SIGRID ASMUS	Seattle	WA	Forage species such as saury, sand lance, and various types of squid are essential to the survival of most seabirds and marine mammals, who would starve without them. Because the status of these fish is not managed or monitored, commercial vessels can begin fishing for these fish at any time with no accounting for the potential effect on the rest of the food web -- and a concern limited only for unaccountable private profit. I am writing to make it clear that I

			fully support your action to protect our currently unmanaged forage fish -- there is no substitute for the key part they play in the food web.
LISA AYALA	Tumwater	WA

GREG TREECE	Sequim	WA	Continued improvements in sustainable fishing is a requirement to allow my children and their children the opportunity to include fish in their diet.
BOB TRIGGS	Port Townsend	WA	I am a fishing guide in the State of Washington. Our forage species are struggling against many factors here. Our whales are sometimes dying of starvation or malnutrition. Our salmon are often below normal weight and fat content. We do not have the density or widespread abundance of forage fish and other species that is needed here to promote healthier fish, bird and mammals, and sustains the myriad marine organisms that live

			interdependently in our waters. We need to do more to rebuild our weakened marine food chain.

PHYLLIS ARIST	Evanston	IL	
ELIZABETH ASHBY	New York	NY	

JACQUES AUTAIN	Miami	FL	
SHARI B	Darrington	TN	My father was a small time commercial fisherman back when there was not any fancy equipment on board to track the fish. He said they knew where the salmon where by watching for the herring balls in the Puget Sound. He also said the salmon used to double their weight in Puget Sound before going upriver to spawn. Then along came International Fisheries for herring and other forage fish in the 1970's. That and the big ocean trawlers with the 30 mile long nets and the fish decline quickly. It is not about the habitat. You can build them a 5 star hotel but if you mug the fish before they get to

			the rivers to spawn all the habitat is for not.

JACQUELINE EDMUNDSON	New Orleans	LA	Humans have many food options. We can eat beans and rice, lake fish, etc. The world is our

			larger. Marine mammals, seabirds and larger fish have but one option - forage fish. They can't pick up the phone and order take out if the forage fish are low or depleted. If we fish out their forage fish., i.e. their food, they die from starvation. As humans we have to share the resources of the planet with other creatures. We can't simply take take take.

MARIA CELIA HERNANDEZ	Boston	MA	West Coast fishery leaders Dear Chair Lowman and council members, The time is now to start act to start a scheduled to place new protections on the little fish that are a big deal in a productive and healthy ocean ecosystem. The forage species such as saury, sand lance, and various types of squid are not managed or monitored. This is the time to protect all the species. To the Pacific Fishery Management Council , Please consider a smart approach: assessing the cost to the rest of the ecosystem before allowing fishing to begin. .Because every time this fisher man and
-----------------------	--------	----	--

			<p>their tools and trawlers are used they destroy the little fish and that hurts the growth of fish.</p> <p>Thank you for taking in consideration this view.</p> <p>Please protect the Pacific forage fish, the small fish other the species</p> <p>Sincerely Maria Celia Hernandez</p>

From: Julia Harris <jhgpx@comcast.net>
Date: Tue, Feb 24, 2015 at 4:22 PM
Subject: Protect Forage Fish
To: pfmc.comments@noaa.gov

Dear Chair Lowman and Council Members,

I greatly appreciate the progress the Council has made over the past three years to protect forage fish. The science clearly shows that forage fish are the critical middle link in ocean food webs and that seabirds, whales, and other marine life depend on forage fish as a vital food resource.

I respectfully ask the Council to take final action in protecting unmanaged forage fish at the March 9, 2015 meeting by adopting the final preferred alternative (Alternative 2) that designates these species as ecosystem component species and prohibits new directed fisheries for these species without a full analysis. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Taking final action in March is essential to maintaining the long-term health of our West Coast marine ecosystem and all the benefits we derive from it. In so doing, the Council will fulfill the first initiative of its Fishery Ecosystem Plan, a visionary document intended to guide its implementation of ecosystem-based fishery management. Protecting forage fish is a great first step.

Thank you for your continued commitment to maintaining a healthy ocean and sustainable fisheries.

Sincerely,

Julia Harris
4045 SW Council Crest Drive
Portland, OR 97239

Subject: Comments on Forage Fish Protection Alternative
To: "pfmc.comments@noaa.gov" <pfmc.comments@noaa.gov>

Dear Chair Lowman and Council Members,

I am requesting that the Council take final action to protect unmanaged forage fish at the 3/9/15 meeting by adopting the final preferred alternative (Alternative 2) that designates these species as ecosystem component species and prohibits new directed fisheries for these species without a full analysis.

This final action is crucial to maintaining long term health of the marine ecosystem. This action will also fulfill the first initiative of its Fishery Ecosystem Plan. Scientific studies have shown that forage fish are essential to the ecosystem food chain.

Thank you in advance for your commitment to maintaining a healthy ecosystem and sustainable fisheries.

Sincerely,

Kathy Balogh

Dear Chair Lowman and council members,

I greatly appreciate the steady progress the council has made over the past three years to protect forage fish. The science clearly shows—and the public recognizes—that forage fish are the critical middle link in ocean food webs. As you know, the ocean off the West Coast supports valuable commercial and recreational fisheries, as well as ecotourism and other industries that are economic drivers for our coastal communities. Healthy populations of forage fish make all of this possible.

I join thousands of fellow citizens in supporting the council's final action, due in March, to protect currently unmanaged forage fish. This action will designate them as ecosystem component species and ensure that adequate science and management are in place before new commercial fisheries can target them. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Forage fish protection has also received strong support from a variety of stakeholders involved in fisheries management, including commercial and recreational fishermen, processors, environmentalists, and the agencies themselves. Rarely has there been such widespread agreement on a management action, and the council should be applauded for its inclusive, deliberate, and scientific process.

Taking final action in March is essential to maintaining the long-term health of our West Coast marine ecosystem and all the benefits we derive from it. In so doing, the council will fulfill the first initiative of its Fishery Ecosystem Plan, a visionary document intended to guide its implementation of ecosystem-based fishery management. This action will designate them as ecosystem component species and ensure that adequate science and management are in place before new commercial fisheries can target them. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Forage fish protection has also received strong support from a variety of stakeholders involved in fisheries management, including commercial and recreational fishermen, processors, environmentalists, and the agencies themselves. Rarely has there been such widespread agreement on a management action, and the council should be applauded for its inclusive, deliberate, and scientific process.

Taking final action in March is essential to maintaining the long-term health of our West Coast marine ecosystem and all the benefits we derive from it. In so doing, the council will fulfill the first initiative of its Fishery Ecosystem Plan, a visionary document intended to guide its implementation of ecosystem-based fishery management. Certainly, protecting forage fish is a great first step.

Thank you for your continued commitment to maintaining a healthy ocean and sustainable fisheries.

Sincerely,
David Linn

Dear Chair Lowman and Council members,

I greatly appreciate the progress the Council has made over the past three years to protect forage fish. The science clearly shows that forage fish are the critical middle link in ocean food webs and that seabirds, whales, and other marine life depend on forage fish as a vital food resource.

I respectfully ask the Council to take final action in protecting unmanaged forage fish at the March 9, 2015 meeting by adopting the final preferred alternative (Alternative 2) that designates these species as ecosystem component species and prohibits new directed fisheries for these

species without a full analysis. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Taking final action in March is essential to maintaining the long-term health of our West Coast marine ecosystem and all the benefits we derive from it. Dear Chair Lowman and council members,

I greatly appreciate the steady progress the council has made over the past three years to protect forage fish. The science clearly shows—and the public recognizes—that forage fish are the critical middle link in ocean food webs. As you know, the ocean off the West Coast supports valuable commercial and recreational fisheries, as well as ecotourism and other industries that are economic drivers for our coastal communities. Healthy populations of forage fish make all of this possible.

I join thousands of fellow citizens in supporting the council's final action, due in March, to protect currently unmanaged forage fish. This action will designate them as ecosystem component species and ensure that adequate science and management are in place before new commercial fisheries can target them. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Forage fish protection has also received strong support from a variety of stakeholders involved in fisheries management, including commercial and recreational fishermen, processors,

environmentalists, and the agencies themselves. Rarely has there been such widespread agreement on a management action, and the council should be applauded for its inclusive, deliberate, and scientific process.

Dear Chair Lowman and Council members,

As a life-long Oregonian, I love and respect the land, water and ecosystems. There's a reason I've stayed in this beautiful state.

Please, take the necessary steps to do what we can to save the health of our oceans for future generations.

I believe forage fish truly are a crucial link in ocean food webs and that "seabirds, whales, and other marine life depend on forage fish as a vital food resource." It's so very important. I'm taking time away from Sunday dinner with the family to reach out to you and to others, to everyone I know, asking people to speak up about this.

I respectfully ask the Council to take final action in protecting unmanaged forage fish at the March 9, 2015 meeting by adopting the final preferred alternative (Alternative 2) that designates these species as ecosystem component species and prohibits new directed fisheries for these species without a full analysis. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Taking final action in March is essential to maintaining the long-term health of our West Coast marine ecosystem and all the benefits we derive from it. In so doing, the Council will fulfill the first initiative of its Fishery Ecosystem Plan, a visionary document intended to guide its

implementation of ecosystem-based fishery management. Protecting forage fish is a great first step.

Thank you for your continued commitment to maintaining a healthy ocean and sustainable fisheries.

Sincerely,
Monica Drake

Dear Chair Lowman and Council members,

I respectfully ask the Council to take final action in protecting unmanaged forage fish at the March 9, 2015 meeting by adopting the final preferred alternative (Alternative 2) that designates these species as ecosystem component species and prohibits new directed fisheries for these species without a full analysis. Establishing basic, precautionary management for these critical species makes sense and is an important step in the transition to ecosystem-based fishery management.

Thank you,

Martha R Wallauer

Dear Chair Lowman and Council members,

I greatly appreciate the progress the Council has made over the past three years to protect forage fish. The science clearly shows that forage fish are the critical middle link in ocean food webs and that seabirds, whales, and other marine life depend on forage fish as a vital food resource.
