

GROUND FISH ADVISORY SUBPANEL REPORT ON FINALIZE
METHODOLOGY REVIEW COUNCIL OPERATING PROCEDURE (COP) 25

The Groundfish Advisory Subpanel (GAP) received a presentation from Mr. John DeVore on finalizing the methodology review COP 25.

The GAP understands most of the heavy lifting on any methodology review is borne more by the Scientific and Statistical Committee (SSC) and Groundfish Management Team (GMT). However, the GAP appreciates the inclusion to review methodologies specifically related to harvest specifications. Furthermore, we understand any SSC review of highly technical methodologies related to stock assessments will be part of the public Council process and the GAP will have the opportunity to weigh in at the appropriate time.
