

2017 AND 2018 GROUNDFISH HARVEST SPECIFICATIONS

The following tables are included in this attachment:

- Table 1. Proposed 2017 and 2018 OFLs (mt) for west coast groundfish stocks.
- Table 2. The range of alternative 2017 ABCs (mt) varied by the probability of overfishing (P^*) for west coast groundfish stocks.
- Table 3. The range of alternative 2018 ABCs (mt) varied by the probability of overfishing (P^*) for west coast groundfish stocks.
- Table 4. 2017 and 2018 harvest specifications (overfishing limits (OFLs in mt), acceptable biological catches (ABCs in mt), and annual catch limits (ACLs in mt)), for west coast groundfish stocks and stock complexes under default harvest control rules.

The following tables provide the 2017 and 2018 harvest specifications (overfishing limits (OFLs), acceptable biological catches (ABCs), and annual catch limits (ACLs) under proxy reference points for deciding OFLs and default harvest control rules decided by the Council for managing west coast groundfish stocks and stock complexes. Not all the information needed to decide 2017 and 2018 harvest specifications was available as of the briefing book deadline. Such affected stocks and stock complexes are highlighted in these tables. Missing harvest specifications will be made available in time for a November Council decision. These tables are revised from those provided in the advanced briefing book under Agenda Item H.5, Attachment 1.

Table 1. SSC-endorsed 2017 and 2018 OFLs (mt) for west coast groundfish stocks (overfished stocks in CAPS; stocks with new assessments in bold; component stocks in status quo stock complexes in italics; more information is needed for deciding harvest specifications for highlighted stocks and stock complexes).
