

MODEL EVALUATION WORKGROUP REPORT
ON METHODOLOGY REVIEW PRELIMINARY TOPIC SELECTION

The Model Evaluation Workgroup's (MEW) April list of work tasks is:

- 1) Continue development of new Chinook FRAM Base Period, and associated documentation. Development of the new base period will incorporate the algorithm changes reviewed in October, 2015, additional data compilation, and model run comparisons using the existing Chinook base period dataset and model outputs from the proposed base period. The intent is that by the Salmon Methodology Review a comprehensive analysis, evaluation and documentation of the new Base Period will be completed, allowing for consideration by fishery managers for use of the new Base Period in 2017.
- 2) Produce FRAM User's Manual for the Visual Studio version of the FRAM model.
