

GROUND FISH MANAGEMENT TEAM REPORT ON THE
2017-2108 HARVEST SPECIFICATIONS AND MANAGEMENT MEASURES
RULEMAKING UPDATE AND CLARIFICATIONS

The Groundfish Management Team (GMT) reviewed the Situation Summary ([Agenda Item F.3, Situation Summary](#)); it is the Team's understanding the Council's intent was to manage blackgill rockfish within the southern Slope Rockfish complex with a species-specific blackgill rockfish harvest guideline until Amendment 26 is implemented, and yellowtail rockfish should be managed with species-specific trip limits, consistent with the analysis presented in June.
