Motion 19 [[mp3: 6-12-18pm1 1:28:55](#)]: Council adopt as its Final Preferred Alternative for Groundfish Management Measures for 2019 and 2020 the GMT recommendations for Item #11 (Washington recreational fisheries) and #20 (incidental lingcod retention ratio in the salmon troll fishery) as presented in Agenda Item E.4.a, Supplemental REVISED GMT Report 2.

Michele Culver/Rich Lincoln (Motion carried, Ms. Grebel abstained)

Motion 20 [[mp3: 6-12-18pm1 1:46:31](#)]: Council adopt as FPA the 2019 and 2020 tribal management measures referenced in item 10 of Appendix 3 in Revised Supplemental GMT Report 2.

David Sones/Marc Gorelnik (Motion carried unanimously)

Staff Summary: The Council adopted final harvest specifications and management measures for 2019 and 2020 groundfish fisheries as follows:

The Council adopted a new rebuilding plan for yelloweye rockfish that specifies a spawning potential ratio (SPR) harvest rate of 65 percent; 2019 and 2020 annual catch limits (ACLs) of 48 mt and 49 mt, respectively; and a target rebuilding year of 2029. The non-trawl sectors will be

managed using annual catch targets based on the lower harvest rate (SPR = 70 percent) analyzed under Alternative 1 with the associated management measures predicted to stay within those lower ACLs.

The Council confirmed the preliminary preferred alternative for routine management measures with revised estimates of off the top deductions to accommodate groundfish catch in Tribal fisheries, research fisheries, non-groundfish fisheries, and set-asides for approved EFPs, as well as set-asides for at-sea whiting fisheries as recommended by the [GMT](#). The Council also confirmed their preliminary preferred alternative for two-year sector allocations and commercial trip limits for all stocks with revised trip limits for sablefish north of 36° N. latitude and lingcod north of 40° 10' N. latitude for limited entry as recommended by the [GAP](#). The Council adopted the recreational management measures under Alternative 1 recommended by [California Department of Fish and Wildlife \(CDFW\)](#), [Oregon Department of Fish and Wildlife \(ODFW\)](#), and [Washington Department of Fish and Wildlife \(WDFW\)](#), as well as the Treaty Tribal management measures recommended by the [Tribes](#).

The Council adopted the following new management measures for groundfish fisheries: new salmon mitigation measures, the preliminary preferred alternative for new stock complexes with the specification of harvest guidelines for the stocks in the new Oregon complexes, elimination of daily vessel limits in the individual fishing quota (IFQ) trawl fishery, new sablefish and lingcod discard mortality rates for the IFQ trawl fishery, continuation of the Adaptive Management Pass-Through in the IFQ trawl fishery, removal of automatic authority to close at-sea whiting fisheries if darkblotched rockfish or Pacific ocean perch set-asides are exceeded, allowance to fish shoreward of the 40 fm line in the Western Cowcod Conservation Area by commercial and recreational fixed gear fisheries, and Alternative 1 for lingcod retention in the salmon troll fishery as recommended and analyzed by [WDFW](#).

Motion: None

Staff Summary: The Council recommended that the U.S. oppose proposals to increase catch limits for Pacific bluefin tuna at the Inter-American Tropical Tuna Commission (IATTC) and Western and Central Pacific Fisheries Commission (WCPFC) Northern Committee meetings. At its August meeting, the IATTC will be negotiating a new measure for Pacific bluefin management in the eastern Pacific Ocean (EPO) for 2019 and beyond. Immediately following, the Joint Working Group of the Northern Committee and IATTC will meet to discuss long-term Pacific bluefin management and the Northern Committee could propose a revised Conservation and Management Measure for adoption by the WCPFC. In both these forums there will likely be pressure to increase catch limits, because of a recent increase in recruitment resulting in more optimistic projections of stock rebuilding. However, the Council notes these projection results are due to a single year of increased recruitment so it is still highly uncertain that rebuilding targets can be met.

The Council also noted new permit requirements for U.S. vessels intending to fish for albacore in Canadian waters during the 2018 season starting on June 15. The Council asked NMFS to work with the Canadian government to resolve any impediments to access and to keep stakeholders informed.

Motion 11 [[mp3: 6-11-18pm1 0:07:23](#)]: Council proceed with analysis to the two sub-options for Deep-Set Buoy Gear Fishing in the Southern California Bight as previously adopted with the following changes in regards to potential limited access to allow for a phased in approach:

Capacity – Implement permits with initial issuance and total issuance limited to the following:

- 1) Not more than 50 permits per year, not to exceed 300 total
- 2) Not more than 100 permits per year, not to exceed 300 total
- 3) Not more than 300 permits maximum

Also, direct the Highly Migratory Species Management Team to analyze these options along with an open access option using 500 permits as a proxy for open access.

Should the 2018 Eastern Pacific Ocean Swordfish Stock Assessment indicate a change in stock structure boundaries, direct the HMSMT to provide data on how the proposed Deep-Set Buoy Gear fishery will impact that stock.

John Ugoretz/Marc Gorelnik

Amendment 1 [[mp3: 6-11-18pm1 0:36:57](#)]: Delete the last paragraph.

Rich Lincoln/Corey Niles (Amendment carried unanimously)

Motion 11, as amended, carried unanimously

Staff Summary: The Council revised the range of options for the number of permits and the manner of issuance under the limited entry alternative. (Limited entry would apply to the area east of a line extending due south from Point Conception.) These options would allow a phased in approach whereby the Council would issue an initial number of permits and could then issue additional permits in subsequent years up to a cap of 300 permits. These options for initial issuance and total issuance are:

1. Not more than 50 permits per year, not to exceed 300 total.
2. Not more than 100 permits per year, not to exceed 300 total.
3. Not more than 300 permits maximum.

The options are meant to allow flexibility such that the Council would not be obligated to issue the whole of the specified annual number, nor would the Council have to issue all permits up to the specified cap. Rather, these options facilitate the analysis of a phase-in approach, which would allow the Council to proceed cautiously to reach a level of permits that best meets management objectives.

The Council specified an estimate of 500 vessels for the purposes of analyzing an open access fishery.

c. Council Action: Provide Guidance on Swordfish Management Project Planning, Review and Potentially Modify the Range of Alternatives for Increased DGN Monitoring and Adopt a Preliminary Preferred Alternative, if Possible [[mp3: 6-12-18am2 0:00:09](#)]

Motion: None

Staff Summary: The Council recommended making basic revisions to the draft Swordfish Management and Monitoring Plan based on recommendations from [NMFS](#), the [HMSMT](#), and Highly Migratory Species Advisory Subpanel ([HMSAS](#)). The Council will review the draft plan, with the intention of adopting a final plan at a future meeting once more information on ongoing initiatives becomes available. These include SSC review of bycatch estimation methodologies that could be used for DGN fishery performance standards; trials of electronic monitoring in the DGN fishery, especially for unobservable vessels; results from EFPs the Council previously recommended for issuance or is currently considering; and establishing a regulatory framework for a DSBG fishery.

Increased monitoring of the DGN fishery is an objective of the SMMP. The Council reaffirmed its [preferred alternative adopted in September 2015](#). In part, the Council's preferred alternative, as reaffirmed, is in the near term to achieve a 30 percent monitoring coverage level through a combination of human observers and electronic monitoring and work toward the objective of monitoring all vessels. In doing so, NMFS should find ways to ensure all vessels are capable of observation by electronic monitoring (including those vessels that cannot currently accommodate human observers). See the [September 2015 Council Meeting Record](#) for the full motion on the Council's preferred alternative. The Council will further consider its proposal at a future time as information becomes available on initiatives to enhance DGN fishery monitoring.
