

INTERIM REPORT  
EXEMPTED FISHING PERMIT  
TESTING COMMERCIAL JIG FISHING GEAR TARGETING YELLOWTAIL ROCKFISH  
FOR 2017/2018 GROUND FISH FISHERIES

We are hoping, with this report, to summarize the activity over the course of this permit, 2013 to the present.

As a reminder we are testing to determine whether the gear works to avoid the species of concern. Even though our totals are low, they still show that the gear is successful. We had a total of 14,071.33 pounds (6.383 MT) of target species and 29.92 pounds (.013 MT) of Yellow-eye Rockfish. That is a substantial difference!

The reason we are focusing on Yellow-eye is that the status of Canary changed over the period from overfished until last year when we were even allowed to sell them. Also, one of our boats caught one (7.5 pounds) Cowcod. This happened because he was using 30 feet of breakaway (allowed by the Terms and Conditions) instead of the 50 feet that the group had mutually agreed to. This was the only Cowcod in 6 years.

It was suggested that we give the Council some idea of the revenue involved and all we have in the way of data is from the landing receipts. This information hasn't always been provided but we can give a couple of samples: Our newest fisherman made four landings in the last 2 weeks of September for \$2819; our most productive fisherman started with us in 2014 and in 5 years up to the present he has landed a total of \$38,210.60. He had two years when he only fished 3 times, so it's hard to present a reasonable average. This year he has landed \$13,847 until now.

It was also suggested that we provide discard data, but I'm afraid we don't have much. I think the observers would be the best source of that data and the Council should request the West Coast Observer program for this information.

In 2013 we were allowed 4 boats and we fished from Point San Pedro north to the Cordell Bank. Our permit allowed testing to the Oregon border, but we couldn't find participants. In 2017 we were allowed 7 boats and fishing from Point Conception to the Oregon border. The program also found a way to relieve the observer costs for our participants. As a result of these changes the data for 2017 and 2018 showed a considerable increase in participation from 5 trips in 2013 to 36 trips in 2018 (to date).

We were asked to increase participation into different habitats, but the fact is that the species we're looking for live where they live because they are suited to those habitats.

We request that this fishery be put into regulation for open access fishermen. At the same time, we request that the allocation for the target species (which has been kept low to discourage contact with species of concern) be increased.

PERSONAL STATEMENT CONCERNING EXEMPTED FISHING PERMIT  
TESTING COMMERCIAL JIG FISHING GEAR TARGETING YELLOWTAIL ROCKFISH

Hello,

My name is Captain Raymond Nottmangel, I have been fishing central and northern California coast over 44 years and much of the time as a charter boat captain.

I have been participating in the testing of commercial jig gear long leader fishing, targeting the yellow tail rockfish. My participation in this fishery has been from 2014 to present. In the RCA at Cordell Bank. The gear seems to work well as we target hovering fish schools of yellow tail and midwater rock fish.

This area is prime habitat for Golden eye rock fish, in a very rocky terrain. Fishing these grounds are an excellent testing area for the gear. As we have only caught one Golden eye this season, as we have participated in nine trips to Cordell Bank and harvested 7,137 lbs to date of rock fish. The average landing weight was approximately 793 lbs per trip.

It is my hope that this report will result in a favorable decision for the opening of this new fishery.

Thank you for your consideration.

Captain Ray Nottmangel
