

COASTAL PELAGIC SPECIES MANAGEMENT TEAM REPORT ON FISHERIES
ALLOCATION REVIEW PROCEDURES

The Coastal Pelagic Species Management Team (CPSMT) attended the Fisheries Allocation Review Policy presentation by Dr. Jim Seger, and reviewed the draft Council Operating Procedure 27. The CPSMT appreciates the importance of this issue and requests additional time to consider which CPS fishery sectors may fit within the definition of allocation, and which triggers should apply.

Regarding Table 1 in Agenda Item D.4, Attachment 4, the CPSMT notes that it should be updated to reflect the fact that the live bait fishery now has required reporting, thereby allowing in-season monitoring of CPS live bait landings.
