

SALMON ADVISORY SUBPANEL REPORT ON
METHODOLOGY REVIEW PRELIMINARY TOPIC SELECTION

The Salmon Advisory Subpanel (SAS) heard from the Salmon Technical Team (STT) regarding preliminary topic selection for methodology review. The SAS supports the recommendations of the STT with respect to the topics included, and offers suggestions on two priority topics.

The highest priority for the SAS is topic four - review of the data and models used to forecast upper Columbia River summer chinook to determine whether a change in methodology is warranted. The second highest priority topic for the SAS is item three, the analysis needed to inform a change to the salmon management boundary line latitude 40° 05' five miles north to latitude 40° 10'.
