

SALMON TECHNICAL TEAM REPORT ON
SALMON METHODOLOGY REVIEW – FINAL TOPIC SELECTION

At the April 2019 Pacific Fishery Management Council meeting, five topics were selected as candidates for Methodology Review, two of which were assigned to the Salmon Technical Team (STT). Those STT topics were: (1) Conduct the technical analysis needed to inform a change of the salmon management boundary line from latitude 40° 05' (Horse Mountain, California) five miles north to latitude 40° 10'; and (2) Provide documentation of the abundance forecasting approach used for Willapa Bay natural coho.

Work has been completed on both of the STT-assigned topics and they will be ready for the 2019 Methodology Review.
