

SALMON TECHNICAL TEAM REPORT REGARDING 2020 PRESEASON  
MANAGEMENT SCHEDULE AND SCOPE ANNUAL MANAGEMENT CYCLE  
AMENDMENT

The Salmon Technical Team (STT) has reviewed Agenda Item E.3, Attachment 2: Draft Workplan for Proposed Changes to the Preseason Schedule in the Pacific Salmon Fishery Management Plan. As stated in the Workplan, it is likely that modifying the existing salmon management schedule would require amending the salmon Fishery Management Plan (FMP). Beyond the issue of changes to the salmon management schedule, the Workplan also includes additional items that need updating in the FMP. If the Council moves forward with a process to amend the salmon FMP, the STT will review the current FMP and provide a small list of additional items that could potentially be included in the FMP amendment process.
