

SALMON TECHNICAL TEAM REPORT ON WILLAPA BAY FORECAST  
METHODOLOGY REVIEW – FINAL ACTION

Since the October 2019 Methodology Review, the Washington Department of Fish and Wildlife (WDFW) submitted updated forecast documentation and assessment of forecast performance for Willapa Bay coho. Early in 2020 the STT and SSC salmon subcommittee met via webinar to review this model documentation. The STT endorses the use of the Willapa Bay coho forecast method proposed by WDFW for use in 2020 and into the future.
