D. Control rule development  (1:00 p.m.)
1. From the Terms of Reference:
   a) establish harvest control rules in the form of fixed or tiered exploitation rates including
      consideration of control rules which reduce exploitation rates at low abundance levels, and
      which may include minimum or target spawner levels;
   b) assess a range of control rules including marine and freshwater fisheries combined, the
      marine and freshwater fisheries components, and marine fisheries only, affecting SONCC
      coho as appropriate, given potential data limitations, and what is feasible to accomplish
      within the timeline described below;
   c) evaluate the feasibility of considering the status of subcomponents of the ESU (e.g., Klamath
      and Trinity Rivers), marine and freshwater environmental conditions and other relevant
      factors as appropriate and as supported by the data available
2. Preliminary suite of control rules
3. Data necessary for each
   • (i.e., forecast dependent, environmental variables, stock subcomponents)

E. Risk Assessment development  (2:00 p.m.)
   R. Beamesderfer
1. Methods used to evaluate alternative control rules
2. Model parameterization
3. Identify performance measures (e.g., fishing opportunity, population viability, spawner abundance, HOR and NOR)
