

SALMON ADVISORY SUBPANEL REPORT ON
CLIMATE AND COMMUNITIES UPDATE

The Salmon Advisory Subpanel (SAS) appreciated the presentation provided by Jonathan Star on the progress of the Climate and Communities Initiative. SAS members are very interested in the well thought out scenarios about projected changes through the following 20 years in the California Current environment. It is important to the SAS members to envision how these changes will affect our fisheries resources and our communities. We support and encourage the Climate and Communities Initiative participants' efforts and look forward to receiving their final product.
