

INSEASON ADJUSTMENTS FOR 2021 – FINAL ACTION

The management measures for groundfish are set by the Pacific Fishery Management Council (Council) with the general understanding that these measures will need to be adjusted within the biennium to attain, but not exceed, the annual catch limits. This agenda item will consider progress to date of the groundfish fishery as well as routine inseason adjustments to the 2021 fisheries, such as catch limits adjustments and season structure. The Council has the opportunity to make adjustments to routine inseason management measures (e.g., trip limits, etc.) under this agenda item. Adjustments are, in part, based on recent landings data and the latest information from the West Coast Groundfish Observer Program. The Groundfish Management Team (GMT) is expected to provide inseason information to the Council under this agenda item.

Council Action:

Consider projections for the 2021 fisheries and adopt inseason adjustments, as necessary.
