

SALMON TECHNICAL TEAM REPORT ON
FUTURE COUNCIL MEETING AGENDA AND WORKLOAD PLANNING

The Salmon Technical Team (STT) is supportive of including the Sacramento River fall Chinook (SRFC) conservation objective review and SRFC age-structured model assessment items on the Council's September 2021 agenda. This work is of high importance to salmon management south of Cape Falcon. Identifying a path forward that will allow for interagency collaboration and meaningful engagement in these projects is a priority for the STT. Although important to consider in the future, a review of the Klamath River fall Chinook conservation objective is not as high a priority for the STT at this time, given the dam removals planned in the Klamath Basin.
