

Corrections to Pacific Coast Groundfish Fishery 2023-2024 Harvest Specifications and Management Measures: Draft Management Measure Analytical Document.

This document is to report and correct errata as found in the Pacific Coast Groundfish Fishery 2023-2024 Harvest Specifications and Management Measures: Draft Management Measure Analytical Document ([Agenda Item F.4, Attachment 2, April 2022](#)). These corrections will be incorporated into the final draft, which will be available for review as part of the June 2022 Advanced Briefing Book.

1. Sablefish No Action ACL values in tables 2-5 and 2-6 are incorrect. The corrected ACLs are: 8,846 mt and 7,780 mt for 2023 and 2024, respectively. These values are correct elsewhere in the [Agenda Item F.4, Attachment 2, April 2022](#) (e.g., table 2-4, table 3-3, and table 4-3).
2. The caption for Tables 2-6 states “No Action 2021” the correct year for this table is 2024 and the caption should read as follows:

Table 2-1, No Action 2024. Estimates of tribal, EFP, research, and IOA groundfish mortality (in mt) used to calculate the fishery HG. a/

3. The caption for Table 2-11 in Section 2.2.2 reports the incorrect years. The caption should read as follows:

Table 2-2. No Action: Sablefish north of 36° N. lat. commercial harvest guideline (HG) in 2023-2024 and allocations to limited entry and open access in metric tons (mt).

4. The years shown in the header row for Table 2-12 in Section 2.2.2 are incorrect. The years should be 2023 and 2024. Additionally, the values for the Row item titled “Total (non-trawl allocation) were not rounded up. This table is reproduced below showing the corrected data highlighted in yellow.

Table 2-12. No Action: Yelloweye rockfish allocations, harvest guideline (HG), and annual catch target (ACT) for 2023 and 2024 in metric tons (mt).

Year	2023 (mt)		2024 (mt)	
ABC	103.1		102.6	
ACL	66		66	
Off-the-Top Deduction	10.7		10.7	
Fishery HG	55.3		55.3	
Trawl (8%)	4.42		4.42	
<i>At-Sea</i>	0		0	
<i>IFQ</i>	4.4		4.4	
Non-trawl (92%)	HG	ACT	HG	ACT
	50.9	39.9	50.9	39.9
<i>Non-nearshore / Nearshore (20.9%)</i>	10.6	8.4	9.1	8.4
<i>WA Rec (25.6%)</i>	13.0	10.4	11.3	10.4
<i>OR Rec (23.3%)</i>	11.9	9.2	11.9	9.2
<i>CA Rec (30.2%)</i>	15.4	12.0	15.4	12.0

5. In several instances, the document states that the Pacific spiny dogfish stock is 34 percent depleted and in the precautionary zone (i.e., below the 40 percent management target), but the stock is in fact 42 percent depleted and above the 40 percent management target, just above the precautionary zone (see [Agenda Item F.3, Attachment 2, April 2022](#)).
