

SALMON ADVISORY SUBPANEL REPORT ON THE FINAL METHODOLOGY REVIEW

The Salmon Advisory Subpanel (SAS) was briefed on the final methodology review by Dr. Mike O'Farrell at our November 2 meeting. The SAS is very appreciative of the work being done to update and improve the models and forecasting methodology. Of particular interest to the SAS is the review of the Sacramento River fall Chinook (SRFC) conservation objective. The SAS joins the Salmon Technical Team with our support for making this effort a priority focusing on the development of a new conservation objective for SRFC.
