

SCIENTIFIC AND STATISTICAL COMMITTEE REPORT ON
2025-2026 HARVEST SPECIFICATIONS AND MANAGEMENT MEASURES PLANNING

The Scientific and Statistical Committee (SSC) discussed the proposed process and timeline for 2025-2026 harvest specifications and management measures and has the following comments.

The SSC suggests that the Pacific Fishery Management Council (Council) request an updated rebuilding analysis for quillback rockfish off California, assuming that that area is designated as a stock at this meeting, to be reviewed and endorsed in time for the November Council meeting.

Materials from the third Stock Assessment Review (STAR) Panel will be provided as supplemental rather than in time for the advance briefing book deadline of August 9, 2023.
