

BOEM Bureau of
Ocean Energy Management

Pacific Region

Oregon Draft Wind Energy Areas

Pacific Fishery Management Council
Coastal Pelagic Species Advisory Subpanel

BOEM: Jennifer Miller
NCCOS: Jessica Carlton
August 30, 2023

Agenda

- Offshore wind planning in Oregon
- Development of Oregon Call Areas
- BOEM-NCCOS Spatial Modeling Process
- Potential Future Next Steps

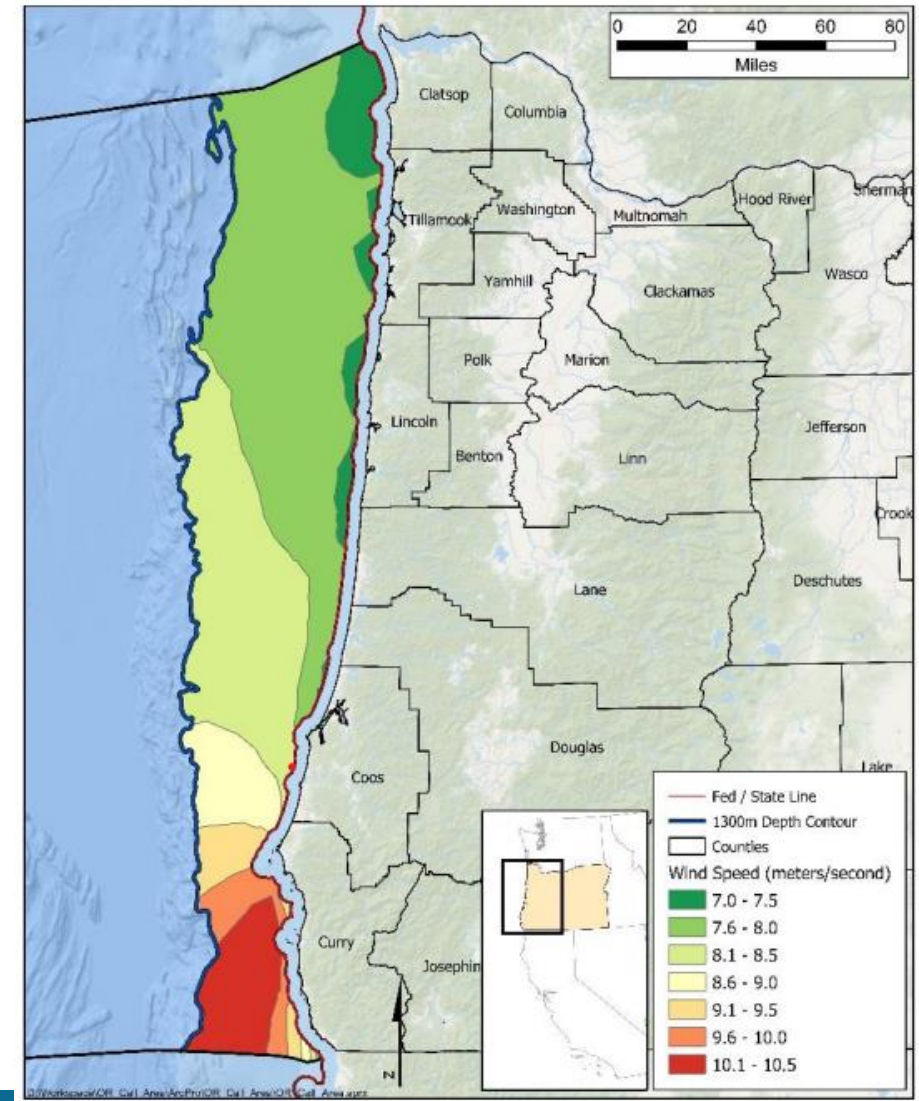

Approach for Offshore Wind Energy Planning in Oregon

- Establish a data gathering and engagement plan in collaboration with Oregon DLCDC and with Task Force input
- Create OROWindMap for data collection in publicly accessible website
- Conduct extensive outreach and engagement with stakeholders (120+ meetings since 2020)
- Published Call for Information and Nominations in the Federal Register in April, 2022: 278 comments, 4 nominations
- Coordination, outreach and engagement with Tribal Governments, State of Oregon, Federal agencies, State agencies
- Employing scientific studies and spatial analyses to support informed decision-making
- Publish Draft Wind Energy Areas for comments

Approach to Planning Process - Planning Area

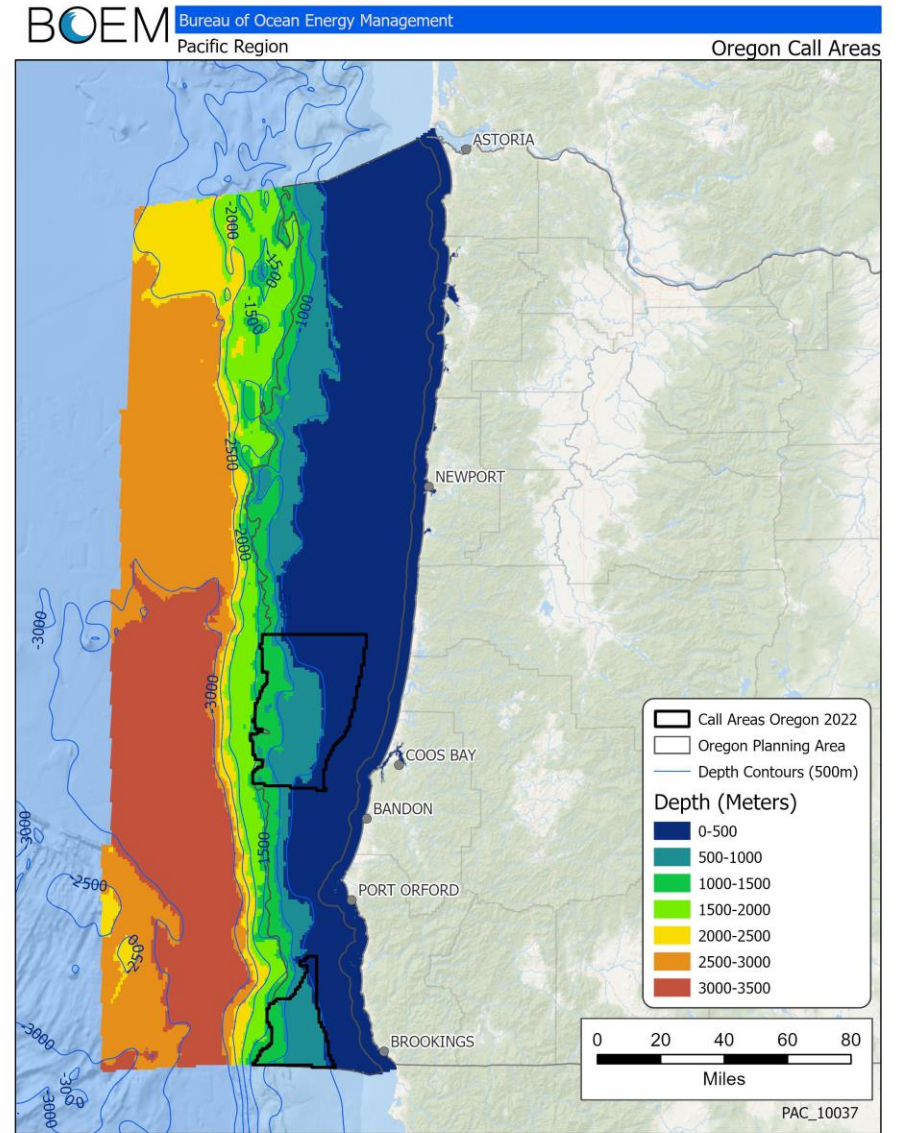

- Planning Area - Entire Oregon OCS, where offshore wind is technically viable
 - 3 nautical miles – 1,300 meters
 - Average wind speeds ≥ 7 meters/second (13.6 knots)
- **1,300 Meter Depth**
 - Technical and economically viable commercial development
 - World's deepest floating offshore wind facilities currently at 300 meters

Why 1,300 Meters Offshore Oregon?

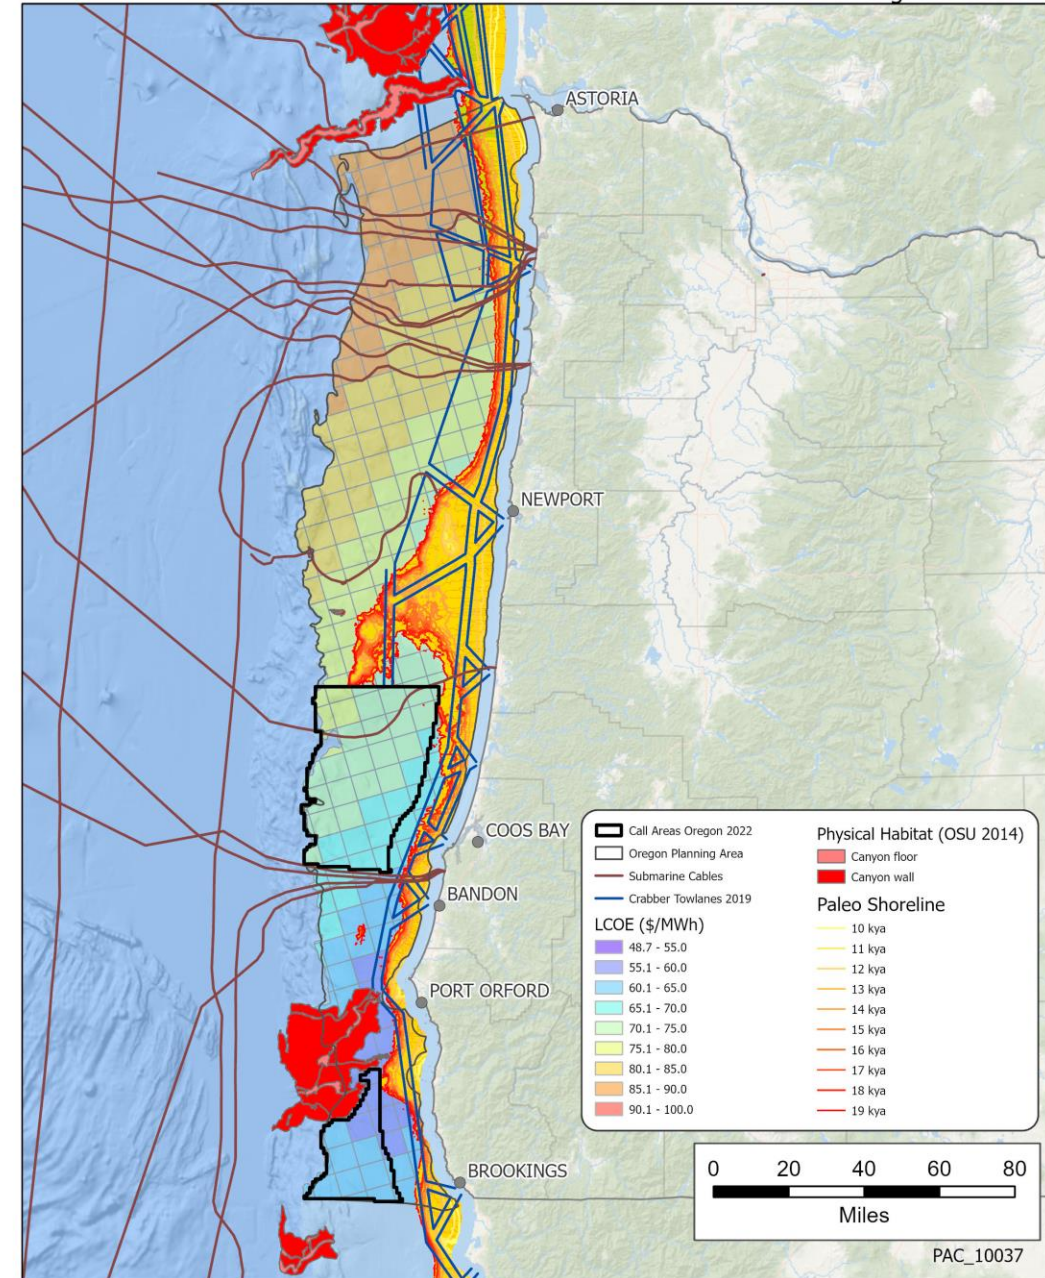

1,300 meter depth contour (4,300 ft)

- Very deep and steep beyond 1,300 m

Call Area Development

- 12 nautical miles (13.8 miles)
- 1,300 meter depth contour (4,300 ft)
- Wind Speed
- Levelized Cost of Energy (LCOE) (\$/MWh)
- Paleo Shorelines
- Undersea Canyons
- Crabber Tug Tow Lanes
- Undersea Cables

Commercial Fishing: Vessel Monitoring System (VMS)

(June 15-17, 2022, Newport, Coos Bay, Gold Beach meetings)

Dungeness Crab
2010-2021

Pink Shrimp
2010-2021

All Trawl
2010-2021

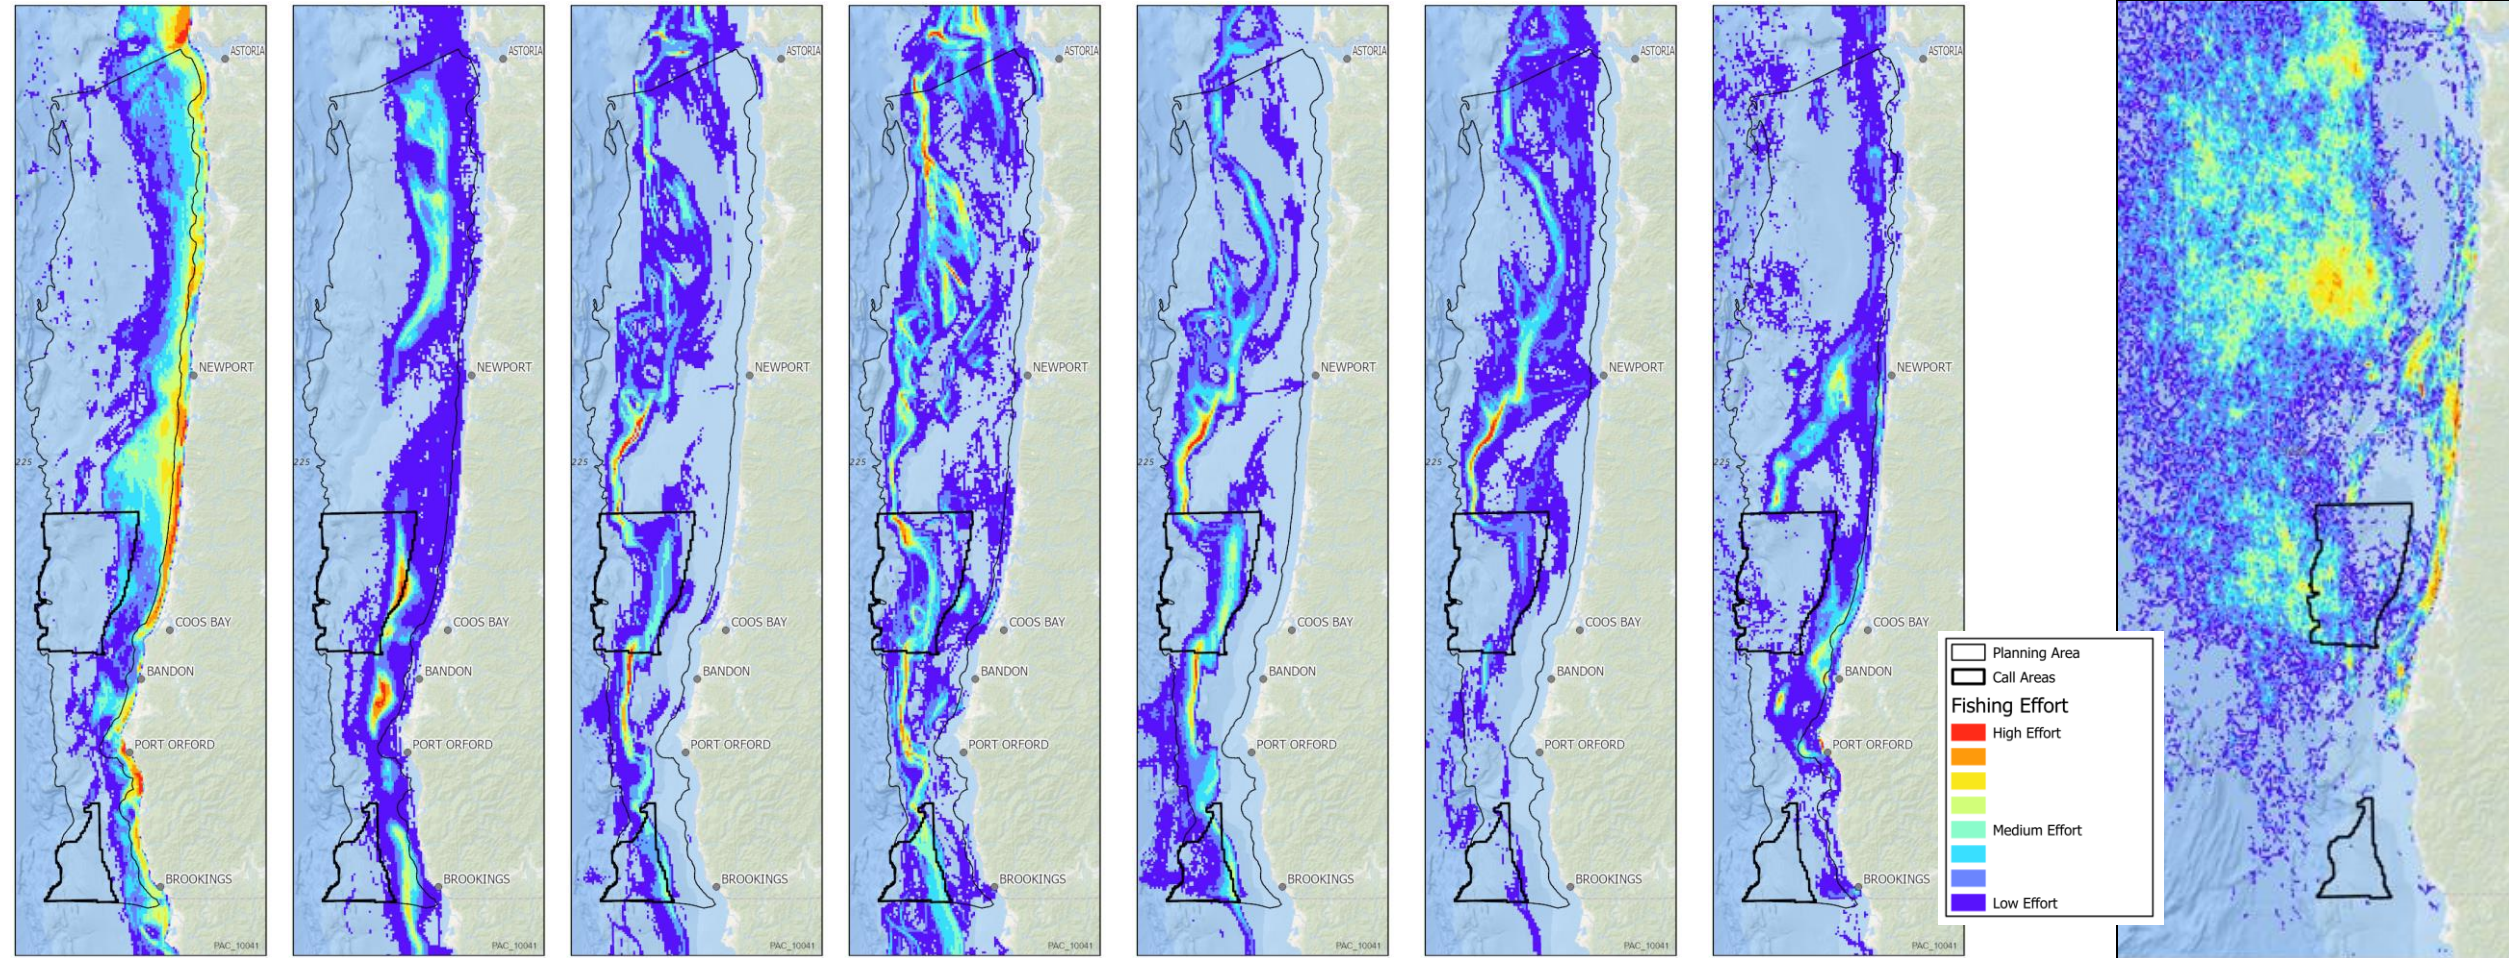

Bottom Trawl
2010-2021

All Whiting
2010-2021

Shorebased Whiting
2010-2021

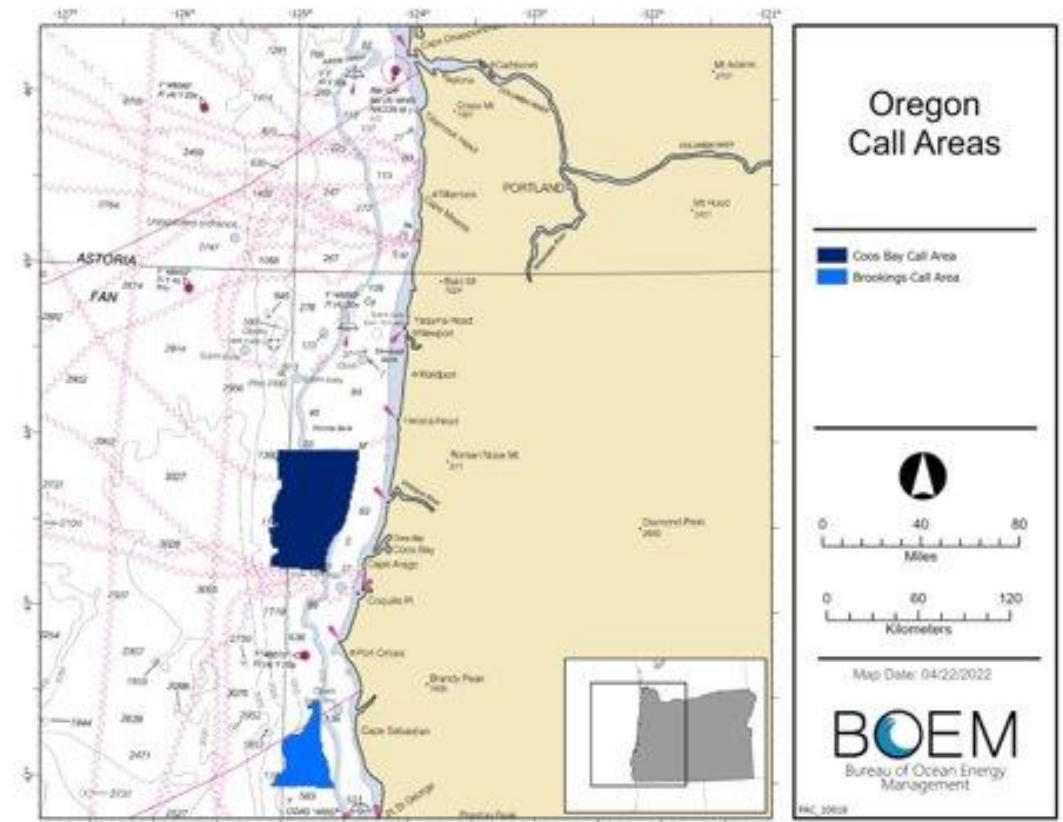

Salmon
2010-2021

Highly Migratory Species
2010-2021

BOEM publishes 'Call for Information and Nominations'

- February 25, 2022 – Task Force Meeting
 - Proposed 3 Call Areas
- April 29, 2022 – Task Force Meeting
 - BOEM publishes 'Call for Information and Nominations' with 2 Call Areas in the Federal Register
- 60-day public comment period
 - 278 unique comments received
 - 4 nominations of interest
- Two Call Areas
 - Coos Bay ~10.6 GW
 - Brookings ~3.5 GW
 - Supports Oregon state planning goal for up to 3 GW of floating offshore wind by 2030 (HB 3375)

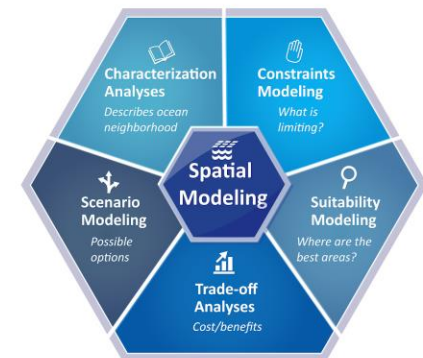

Data Gathering and Engagement Summary Report – Outreach Feedback Themes

- Interest in understanding:
 - **Visual impacts** from offshore wind farms
 - Impacts to **cultural resources** and Native American lifeways
 - Role and need for offshore wind energy as part of **Oregon's energy portfolio**, including **ratepayer costs**
 - **Economic** impacts and opportunities (e.g., jobs, tourism, port and shoreside infrastructure)
 - Socioeconomic impacts to **fishing activities**; long-term impact on the livelihood of fishers and other ocean users
 - Potential **environmental impacts**, including noise impacts and disruption of species behavior and migration patterns, on marine species, birds, and other wildlife
- Support for **continual and meaningful engagement** with potentially affected and interested users, especially ocean users, throughout all phases of offshore wind development

BOEM's Response to Comments and Feedback

- Added Draft Wind Energy Area (WEA) step to the process to improve transparency and allow for input from Tribal Nations, stakeholders, and the public
- Draft WEA development includes: input from government-to-government consultations; engagement with Federal, State, and local agencies; public comments received on Call Areas; BOEM-funded studies; and NOAA NCCOS spatial suitability modeling
- Increased fishing outreach discussions and opportunities for input
- Provided information on the Draft WEAs to the Tribal Nations for consideration and input prior to publication
- Created full-time Tribal Liaison position at BOEM Pacific Office
- Conducted Visual Simulations study

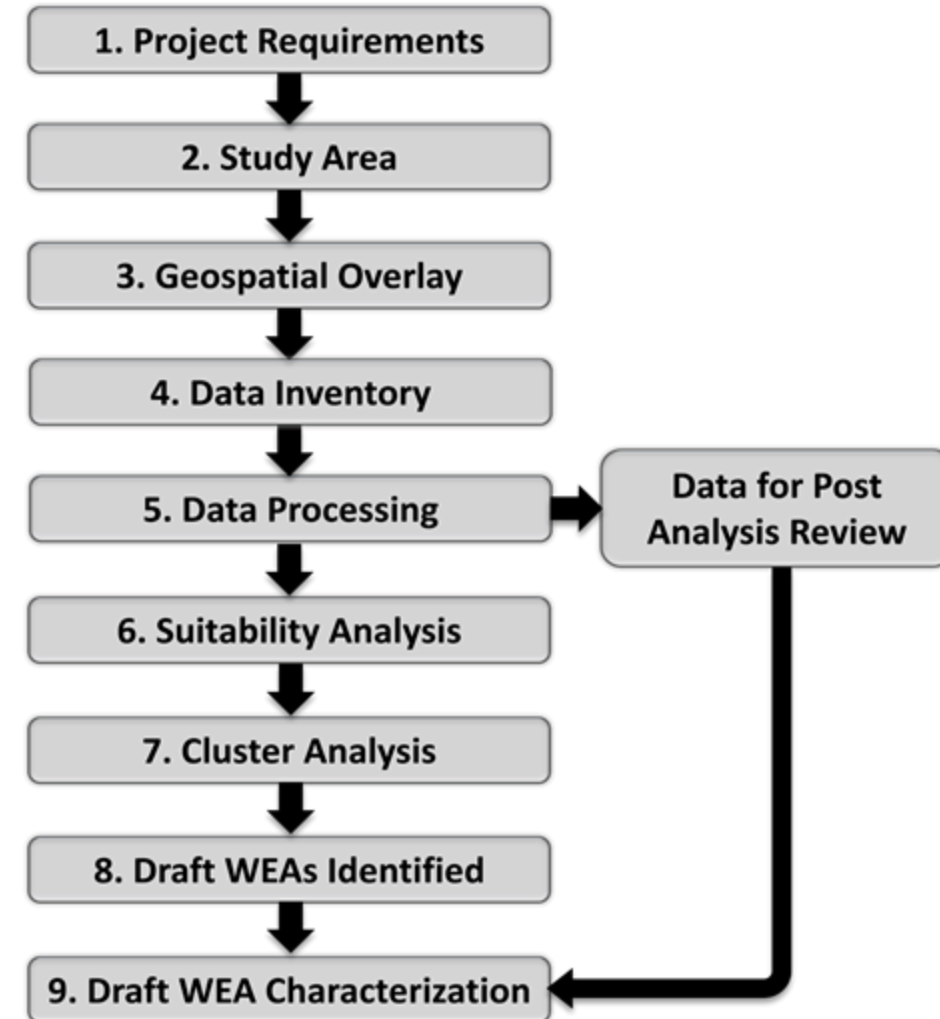

Spatial Modeling and Results

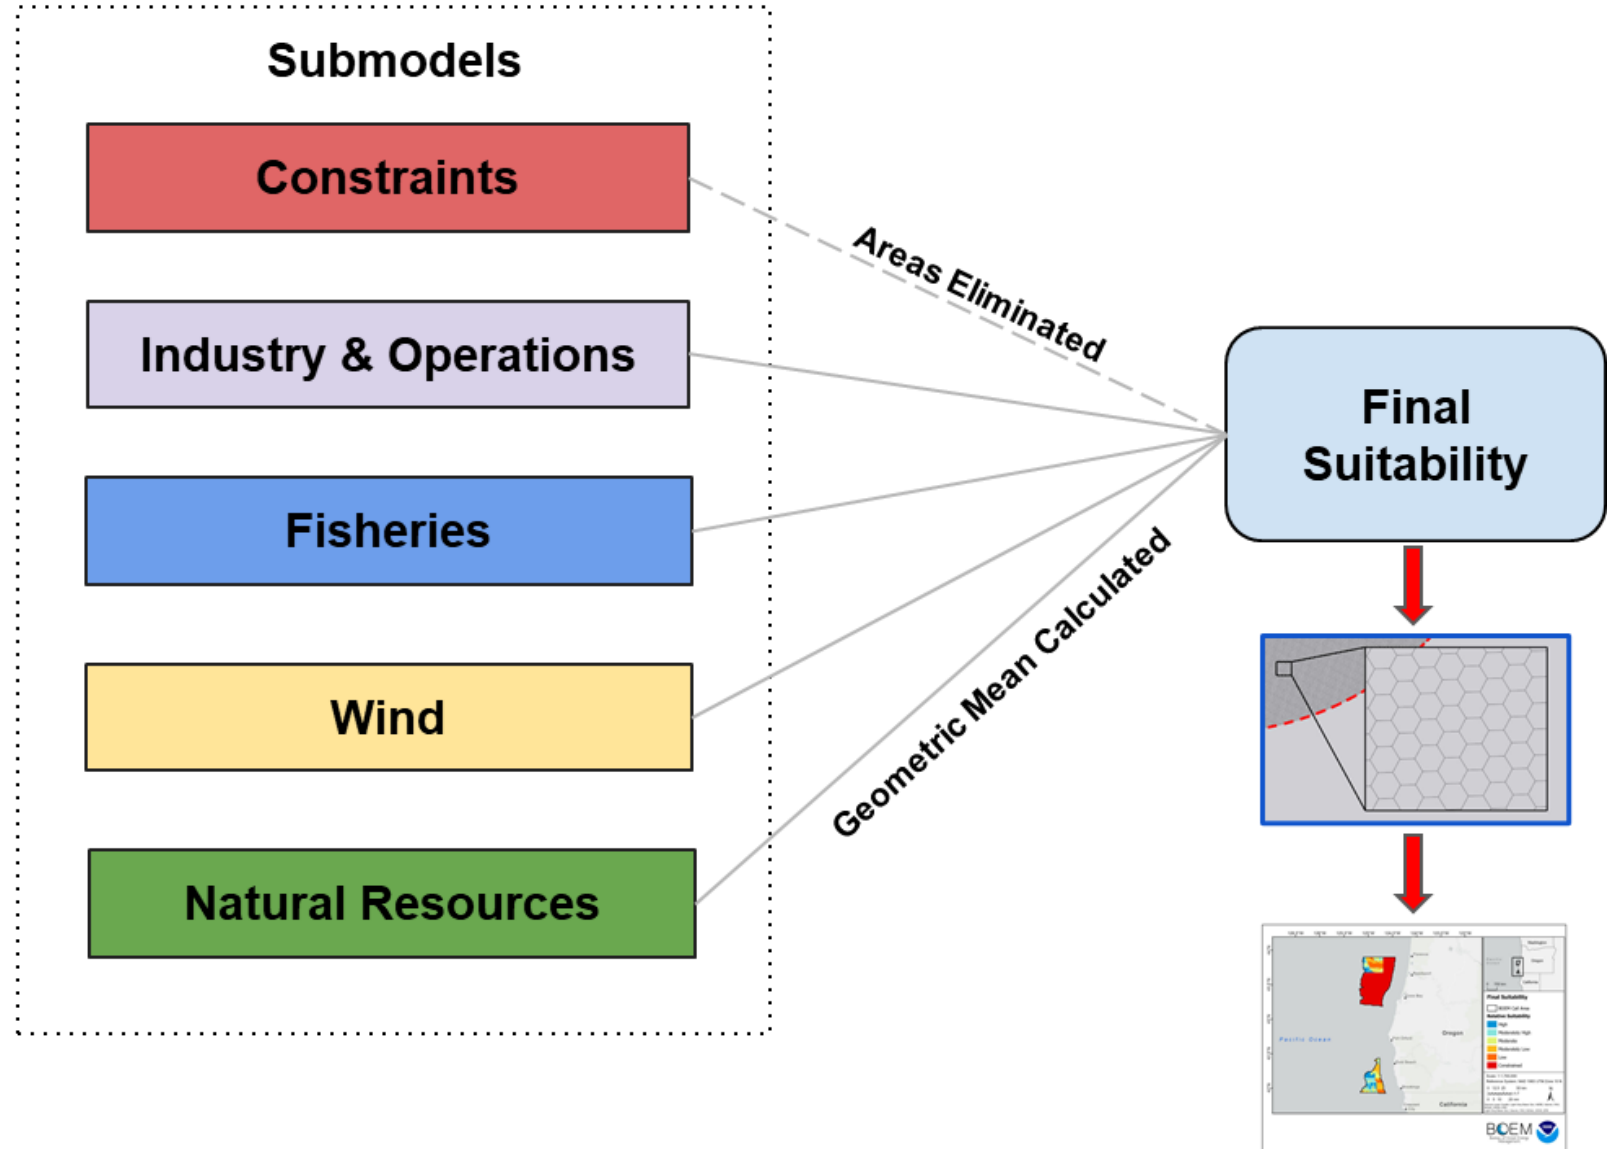

Spatial Suitability Modeling

- A suitability model is a model that weights locations relative to each other based on given criteria.
- A common scale allows for meaningful values to be produced when the criteria are combined.
- Data must be transformed into a common scale so the criteria can be compared. We are using a 0 to 1 scale.
- Suitability modeling allows us to analyze the “whole ecosystem” and identify hotspots of conflict and opportunity.
- Provides defensible and transparent methods.
- Allows for scenario planning.

Spatial Planning Workflow

Modeling Methods

Categorical data

Data	Score
Hard Bottom Habitat	0.1
Marine Protected Areas & Preserves	0.4
Habitat Area of Particular Concern	0.1
Deep sea corals	0.2
Oil and Gas Pipelines	0.6
Shipwrecks	0.1
Shipping lanes	0

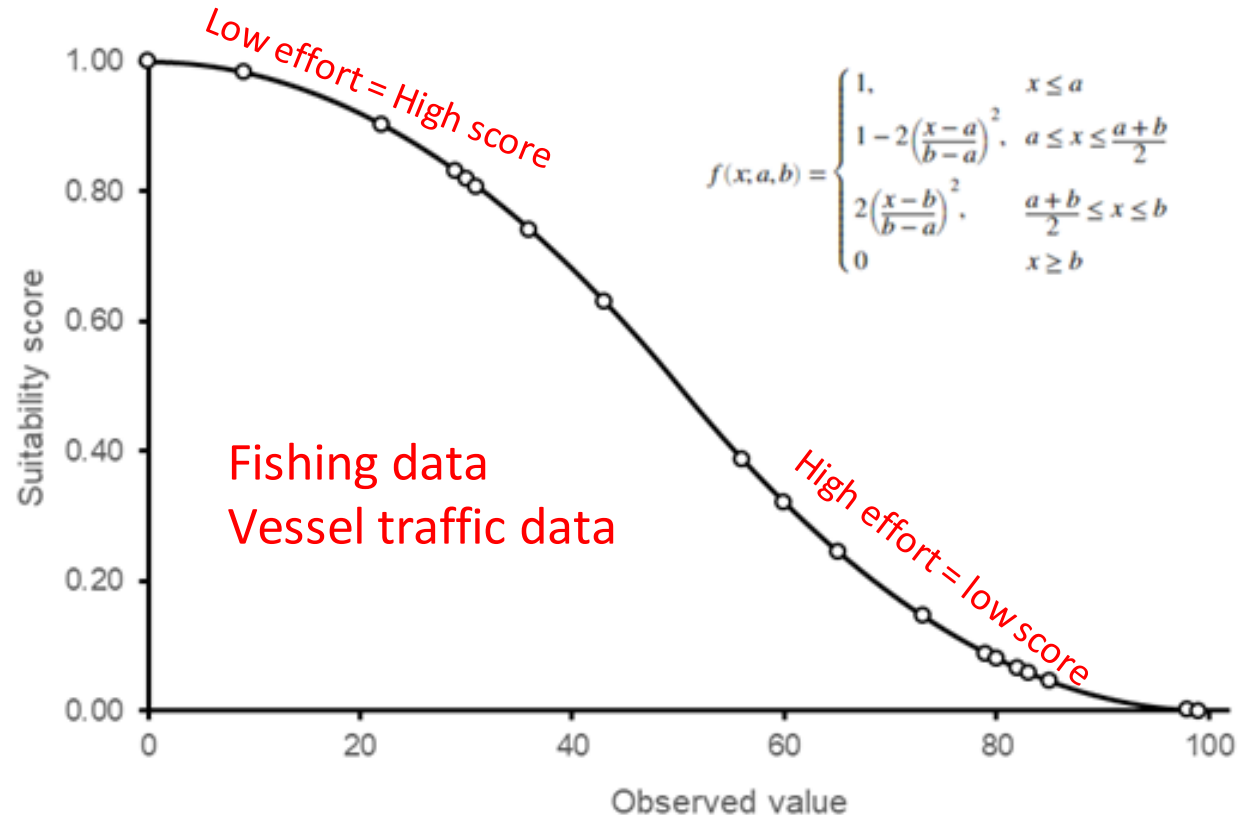

Data scoring

0 = not compatible

0.5 = moderately compatible

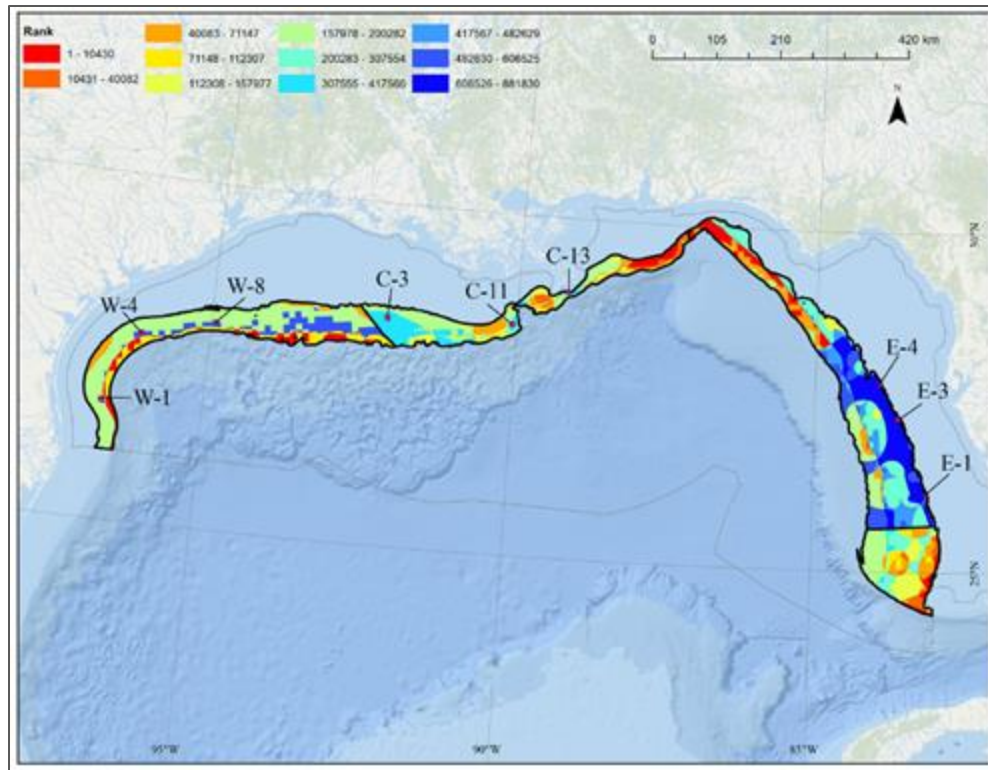

1 = most compatible

Continuous data

Combined Data Layers

- Prioritizes conservation/deconfliction by topic
- Provides opportunity for everyone to get on the same page
- Provides new perspective on the topic at the regional ocean or call area scale
- Provides buy-in

Abstract

Marine Spatial Planning (MSP) provides a process that uses spatial data and models to evaluate environmental, social, economic, cultural, and management trade-offs when siting (i.e., strategically locating) ocean industries. Aquaculture is the fastest-growing food sector in the world. The United States (U.S.) has substantial opportunity for offshore aquaculture development given the size of its exclusive economic zone, habitat diversity, and variety of candidate species for cultivation. However, promising aquaculture areas overlap many protected species habitats. Aquaculture siting surveys, construction, operations, and decommissioning can alter protected species habitat and behavior. Additionally, aquaculture-associated vessel activity, underwater noise, and physical interactions between protected species and farms can increase the risk of injury and mortality. In 2020, the U.S. Gulf of Mexico was identified as one of the first regions to be evaluated for offshore aquaculture opportunities as directed by a Presidential Executive Order. We developed a transparent and repeatable method to identify aquaculture opportunity areas (AOAs) with the least conflict with protected species. First, we developed a generalized scoring approach for protected species that captures their vulnerability to adverse effects from anthropogenic activities using conservation status and demographic information. Next, we applied this approach to data layers for eight species listed under the Endangered Species Act, including five species of sea turtles, Rice's whale, smalltooth sawfish, and giant manta ray. Next, we evaluated four methods for mathematically combining scores (i.e., Arithmetic mean, Geometric mean, Product, Lowest Scoring layer) to generate a combined protected species

Oregon Suitability Model Data Inputs

Data Layer	Setback Distance	Score (0-1)
Constraints Submodel		
Department of Defense (DOD) – Exclusion Area	-	0
Pacific Coast Port Access Route Study (PACPARS)	-	0
Industry and Operations Submodel		
Submarine Cables	0 - 500 m	0.6
	501 - 1000 m	0.8
NMFS Scientific Surveys Combined Data Layer	-	NMFS Scoring
Natural Resources Submodel		
NMFS Protected Species Combined Data Layer	-	NMFS Scoring
NMFS Habitat Combined Data Layer	-	NMFS Scoring
Marine Bird Combined Data Layer	-	Z Membership Function 0.01 - 1.0
Fisheries Submodel		
NMFS & ODFW Fisheries Combined Data Layer	-	NMFS & ODFW Scoring
Wind Submodel		
Levelized Cost of Energy for 2027	-	Linear Function 0.8 - 1.0 (Lower cost is better)

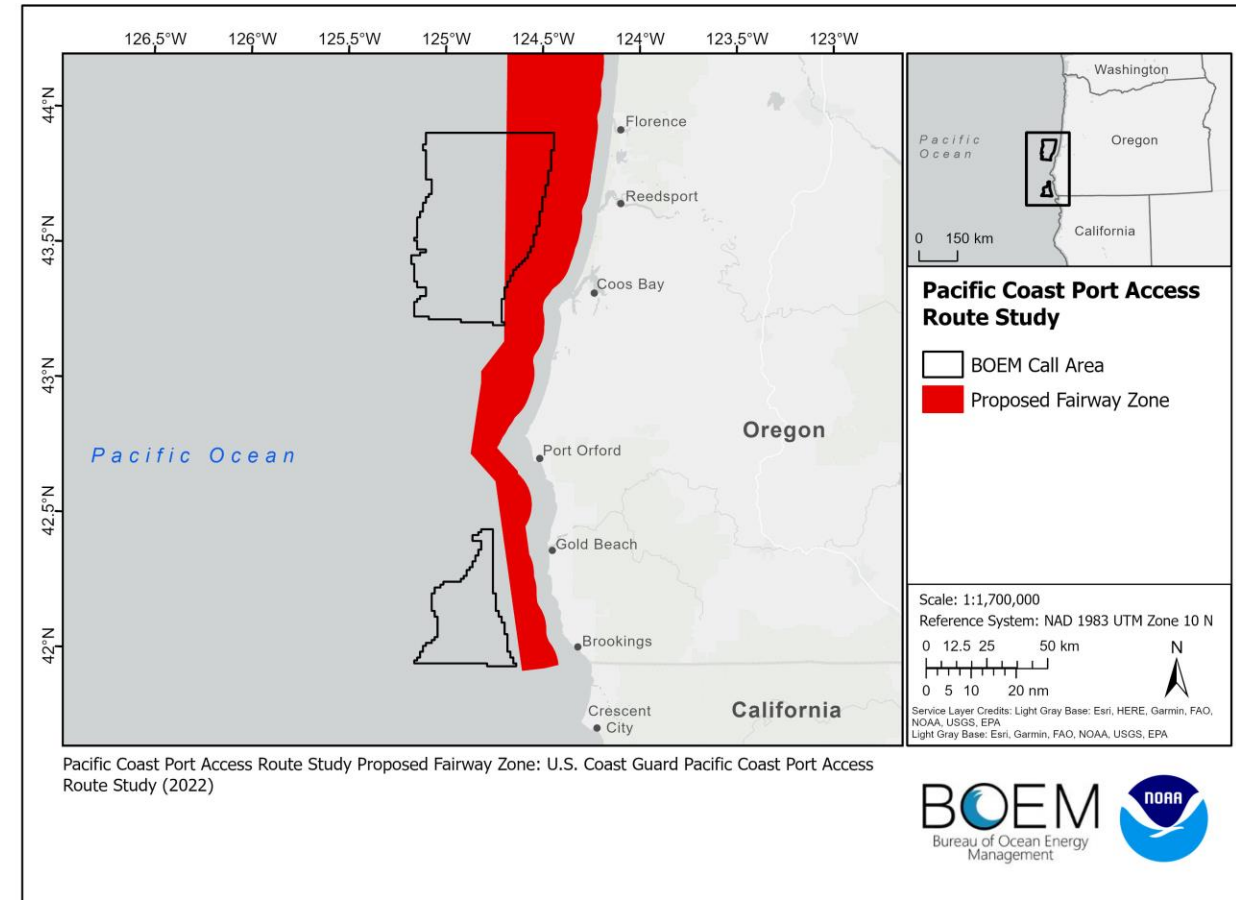

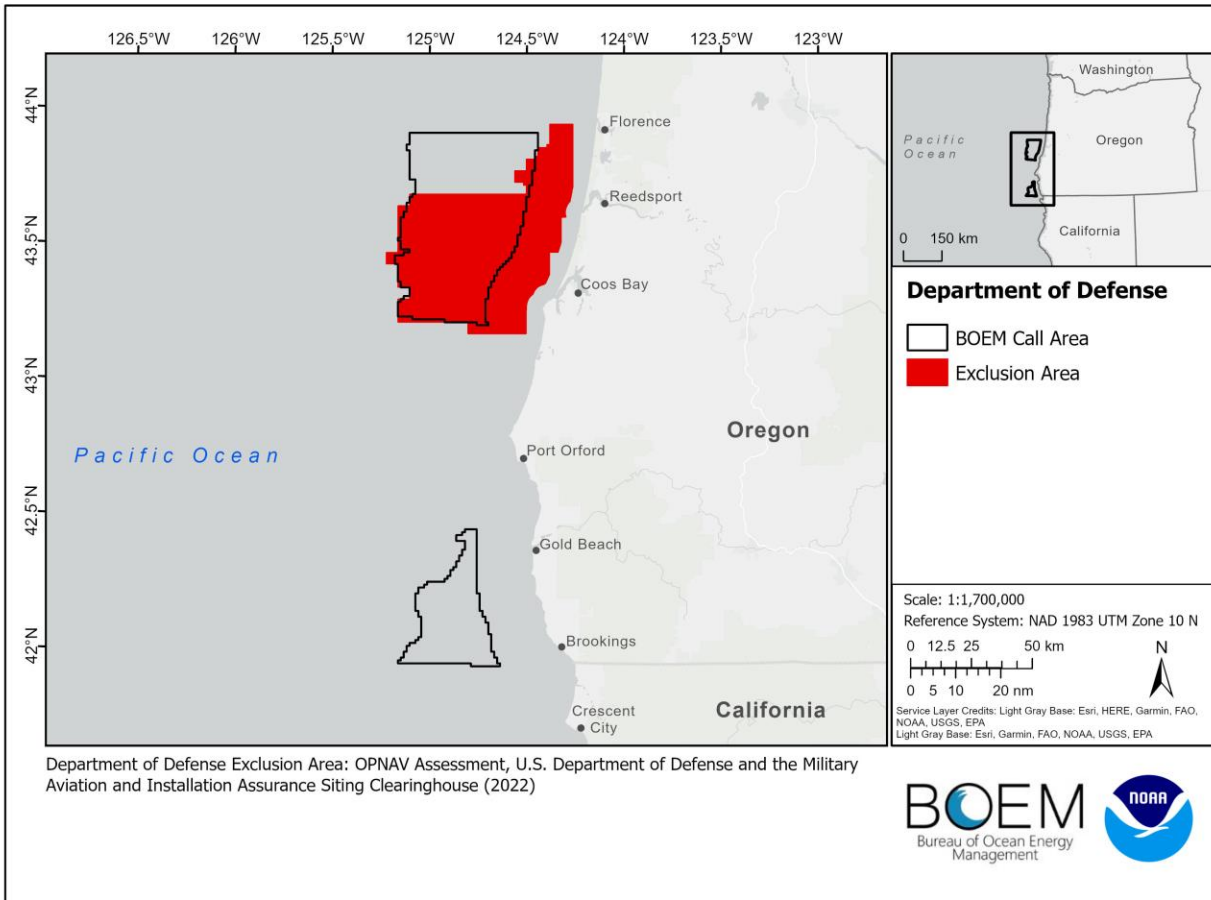

Constraints Submodel

Department of Defense Exclusion Area
PACPARS Proposed Fairway Zone

Constraints Submodel Data Inputs

Department of Defense Exclusion Area Score of 0

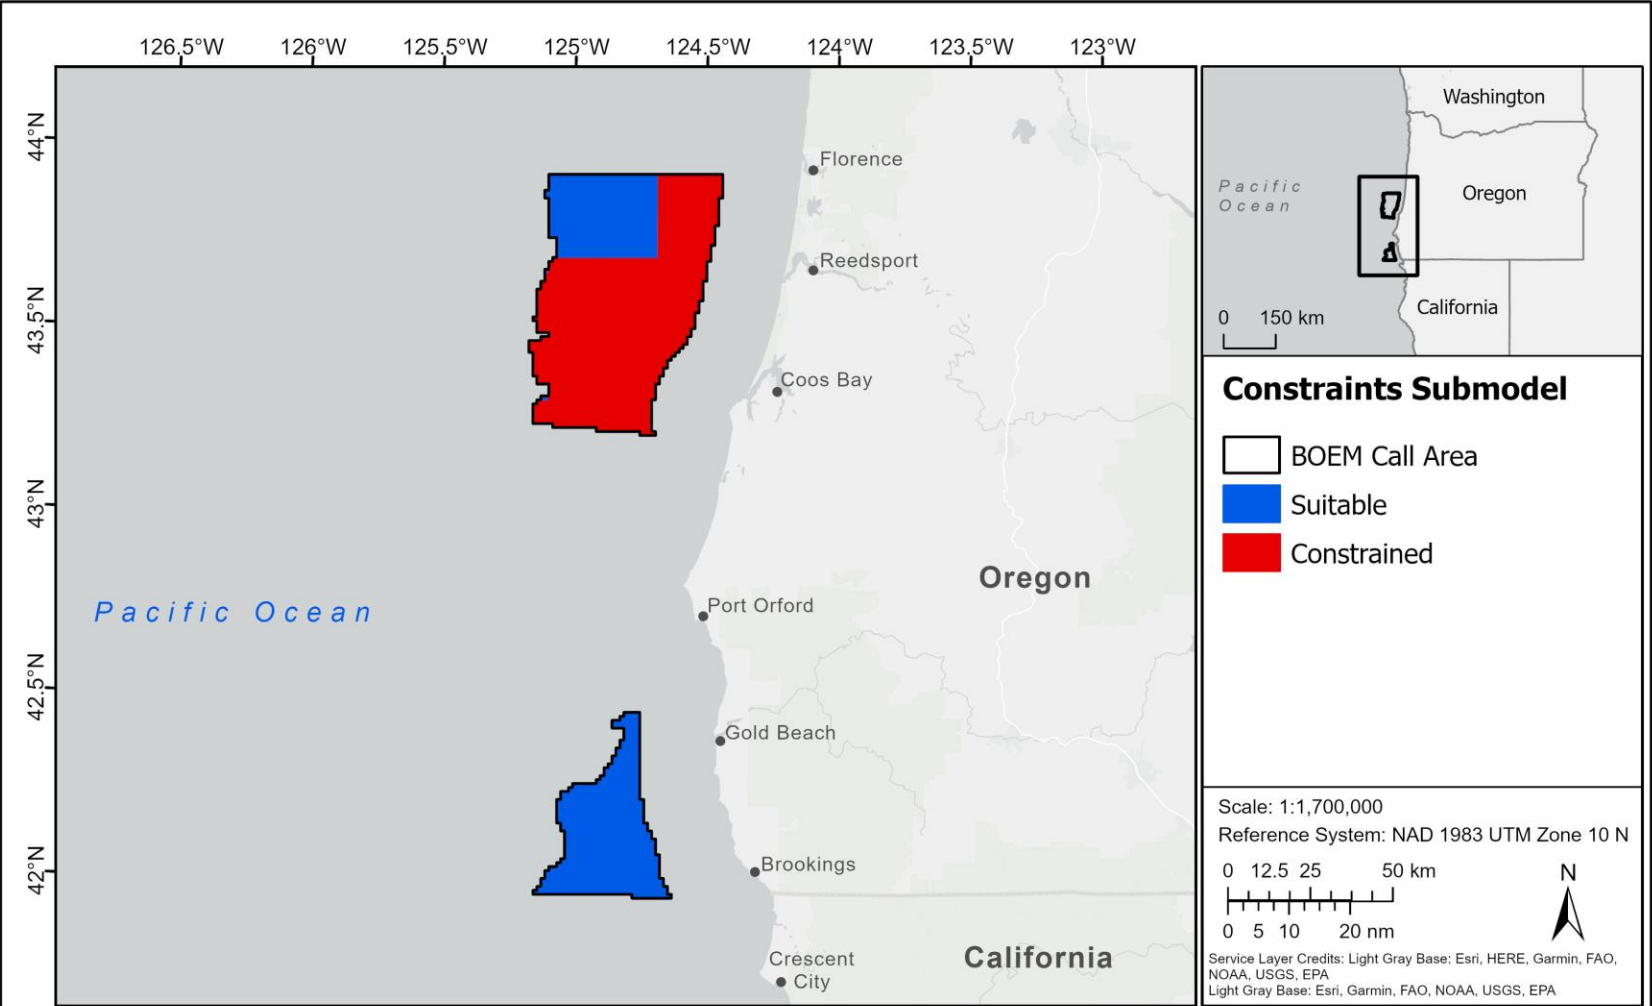

PACPARS – Proposed Fairway Zone Score of 0

Constraints Submodel Results

Constraint data layers	# acres constrained	# acres suitable
DOD	577,900	595,100
PACPARS	212,300	960,700
All Constraints	675,550	497,450

Constraints resulted in a **57.59%** reduction in Call Area.

Industry & Operations Submodel

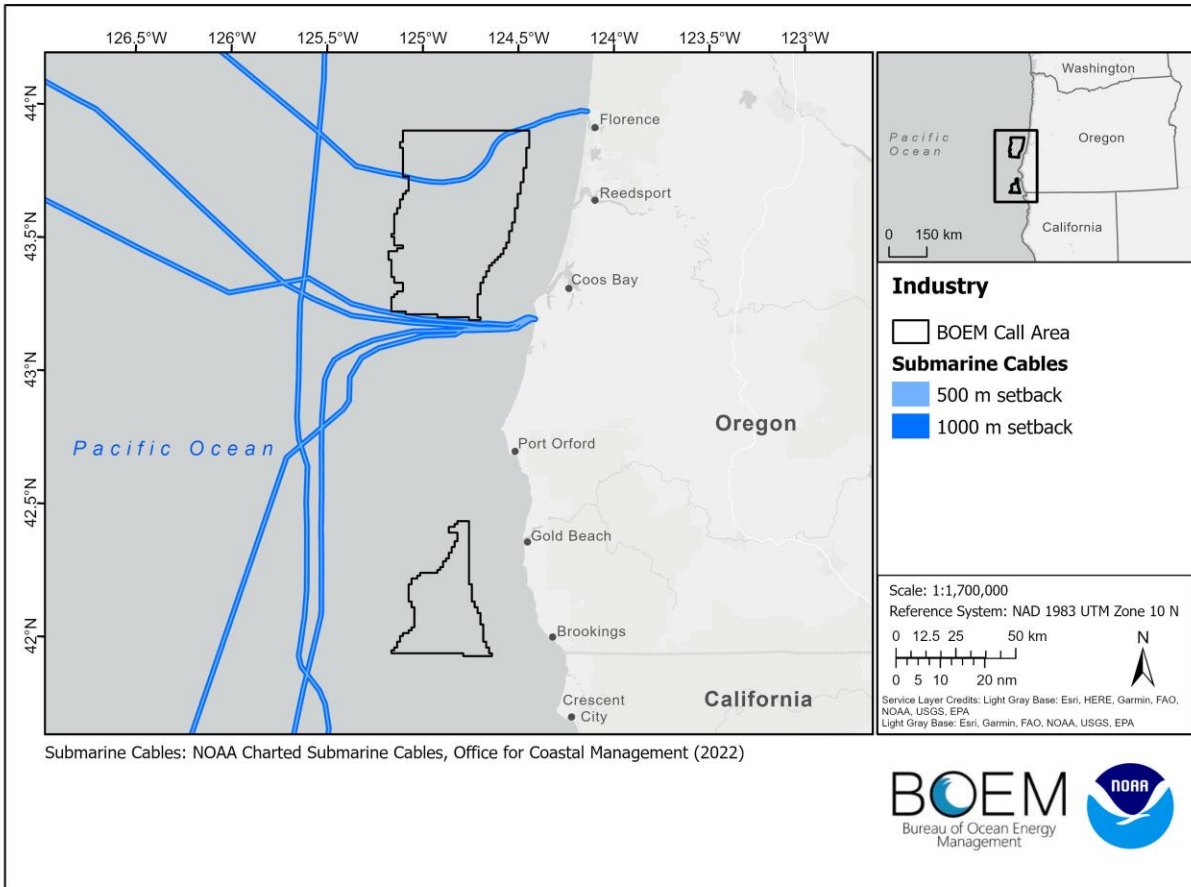

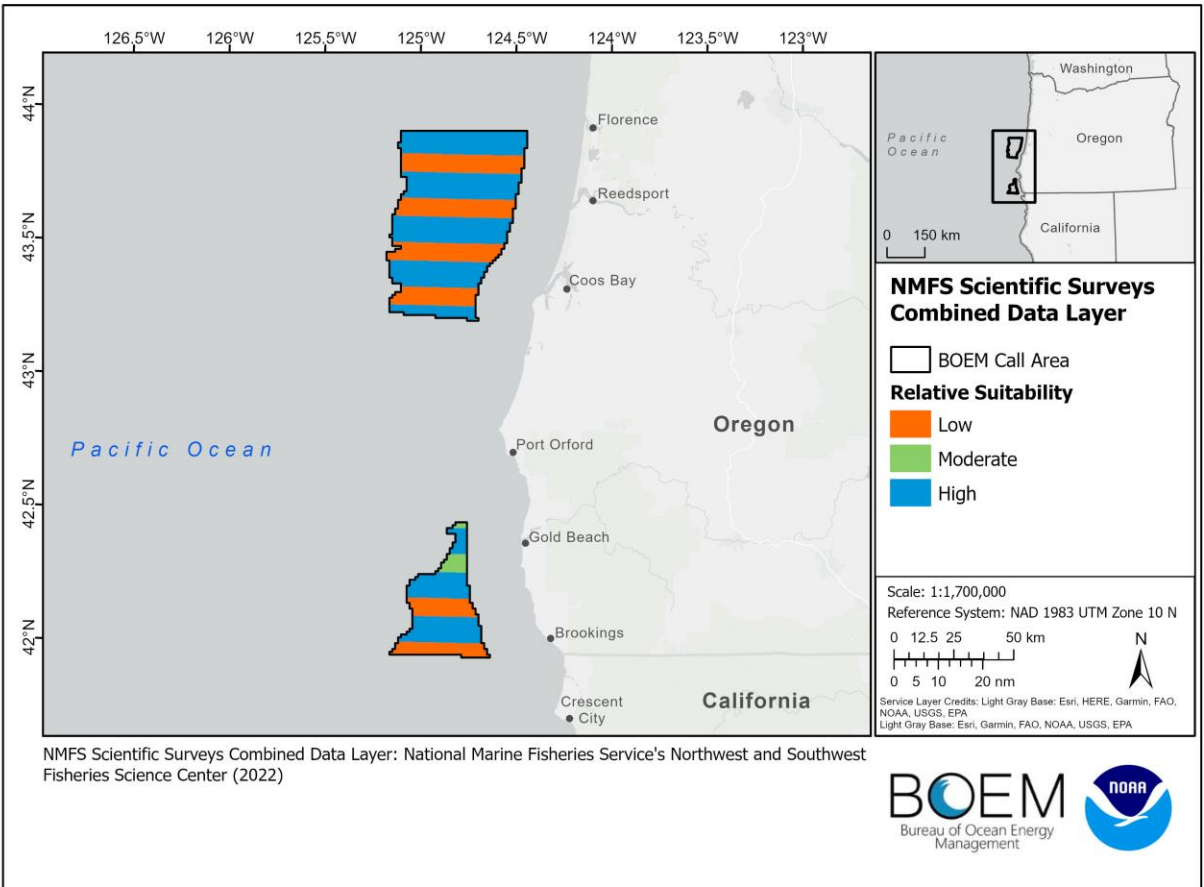

Submarine Cables

NMFS Scientific Surveys Combined Data Layer

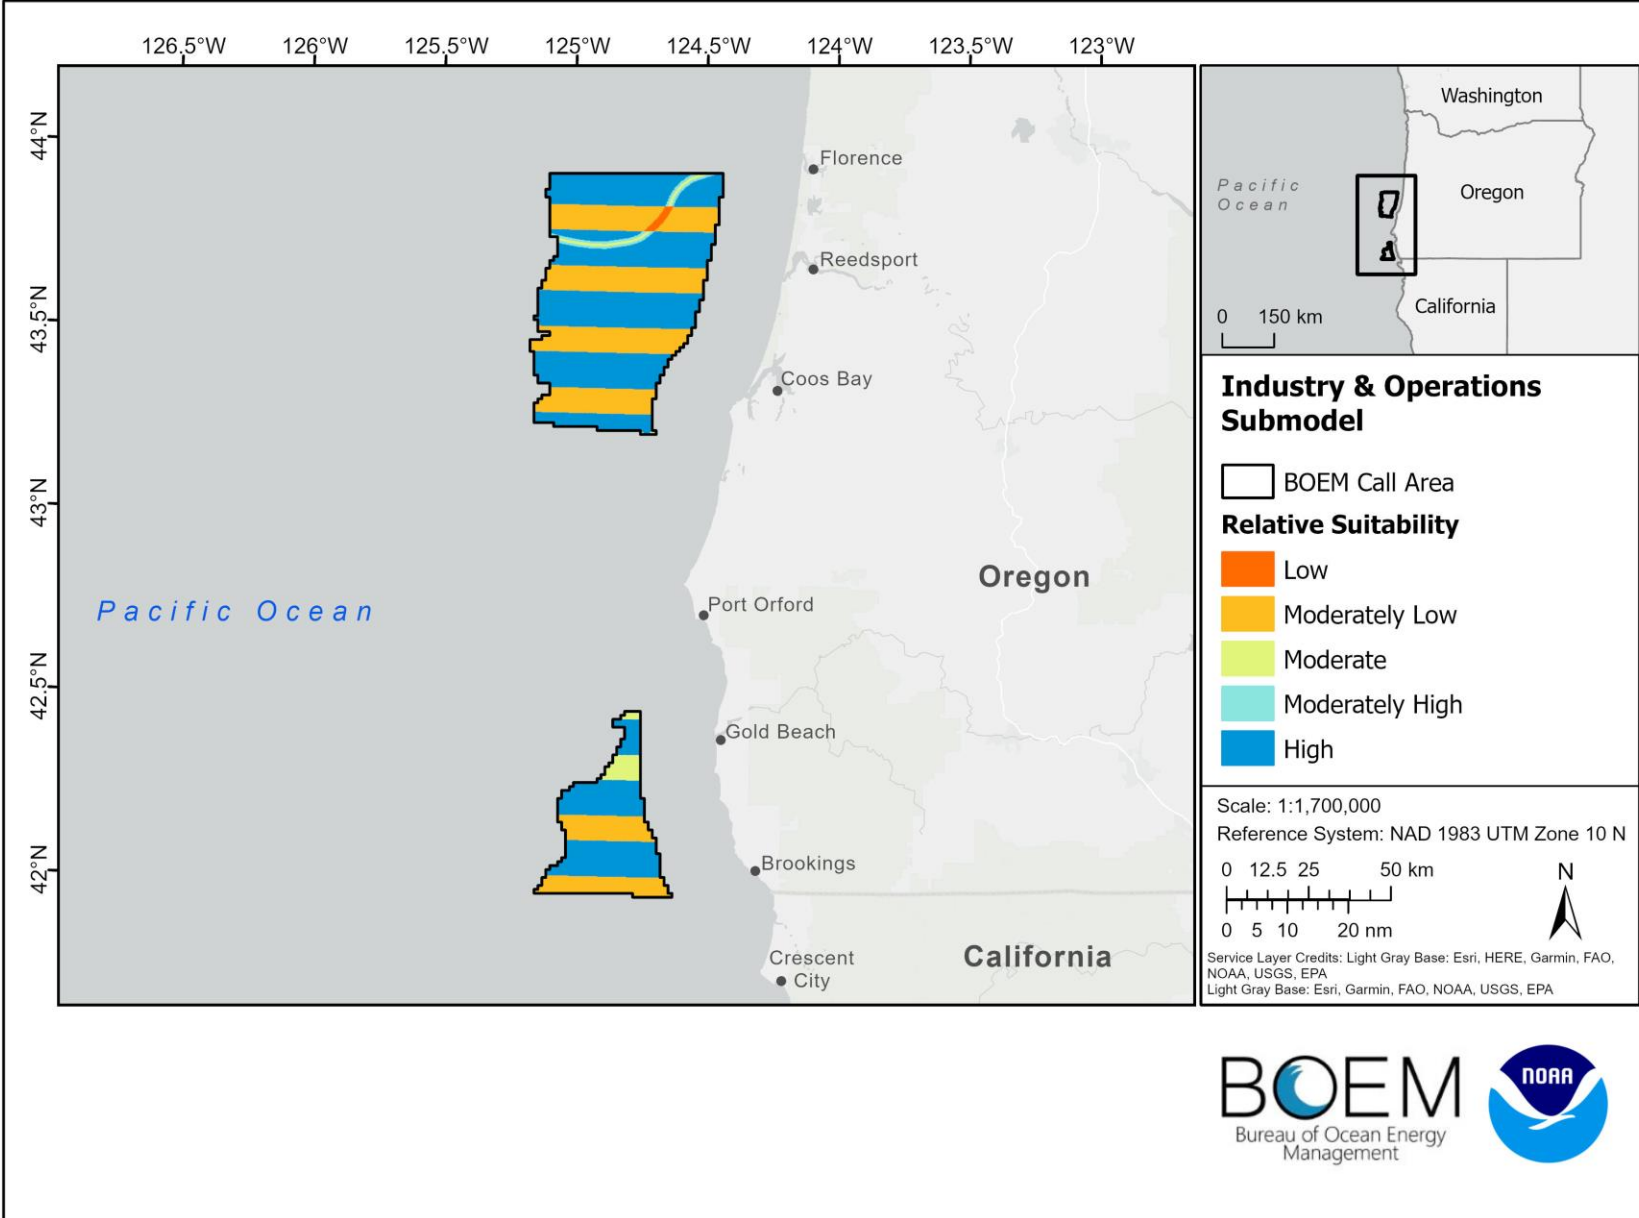

Industry & Operations Submodel Data Inputs

NMFS Scientific Surveys Scoring provided by NMFS

Submarine Cables 0-500 m = 0.6 501-1000 m = 0.8

Industry & Operations Submodel Results

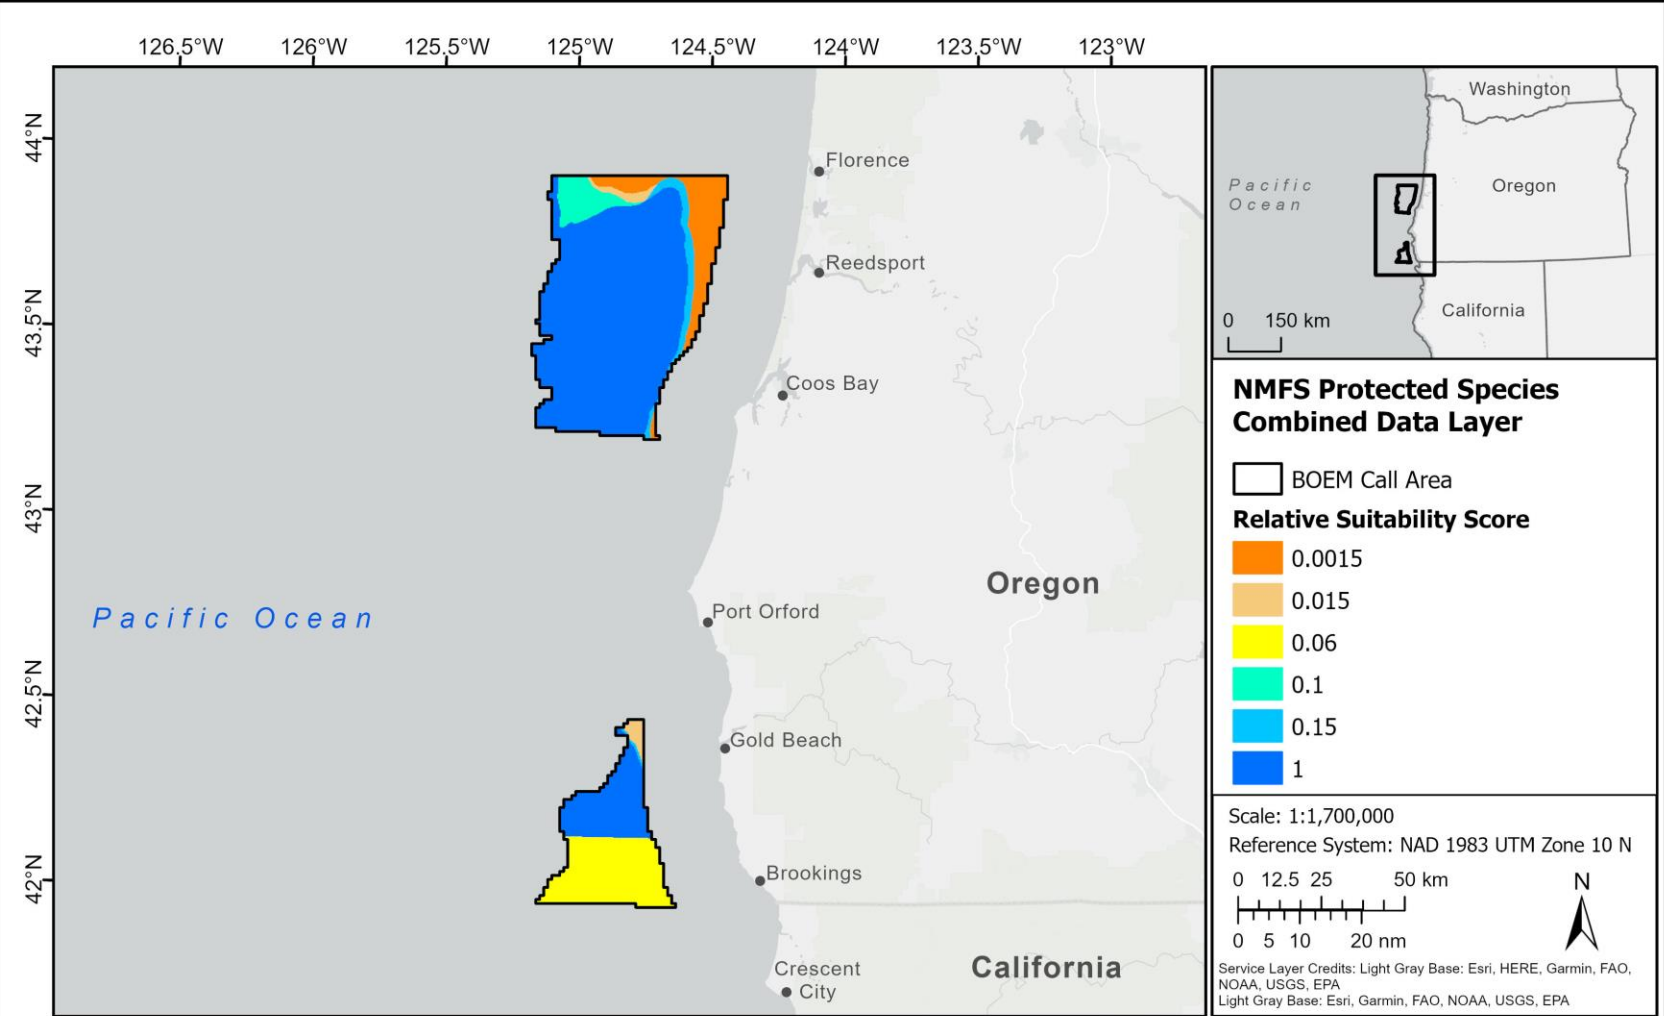

Natural Resources Submodel

NMFS Protected Species Combined Data Layer
NMFS Habitat Combined Data Layer
Marine Birds Combined Data Layer

Natural Resources Submodel Data Inputs

NMFS Protected Species Scoring provided by NMFS

- Leatherback sea turtle
- Southern Resident killer whale
- Humpback whale Mexico DPS
- Humpback whale Central America DPS
- Blue whale

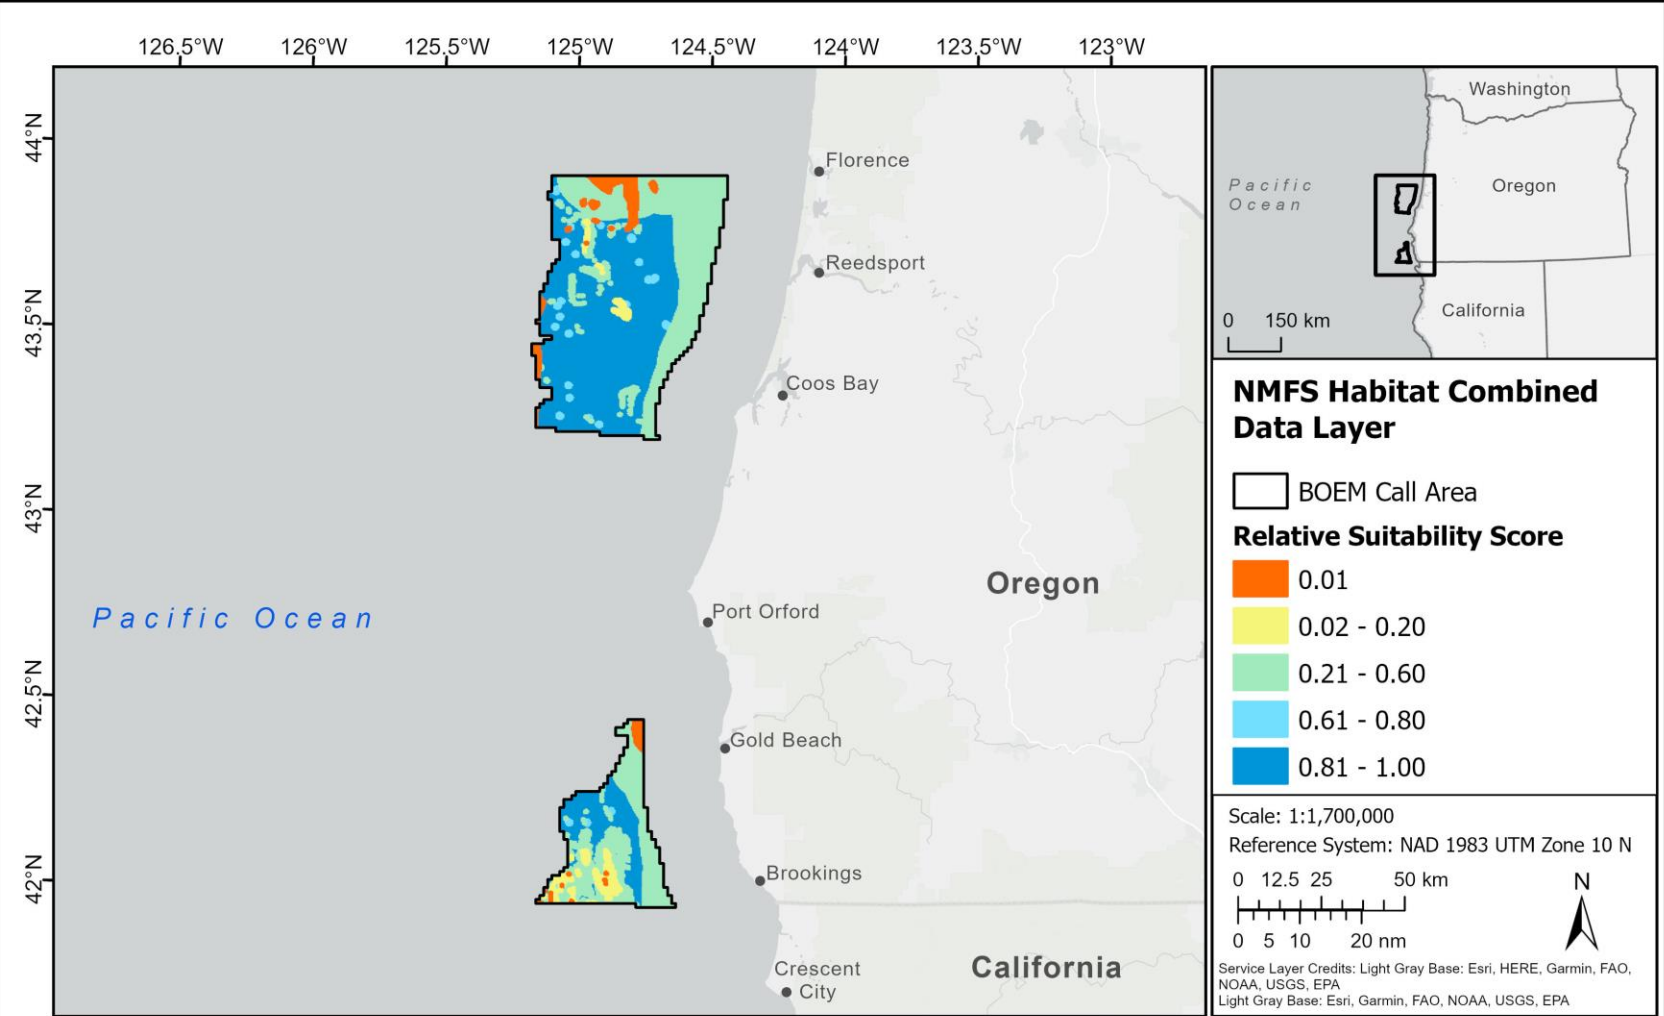

NMFS Protected Species Combined Data Layer: National Marine Fisheries Service's West Coast Region (2022)

Natural Resources Submodel Data Inputs

NMFS Habitat Scoring provided by NMFS

- Essential Fish Habitat Conservation Areas
- Rocky Reef Groundfish HAPC
 - Mapped and Probable
- Deep-sea Coral Habitat Suitability
- Continental Shelf Break
- Methane Bubble Streams

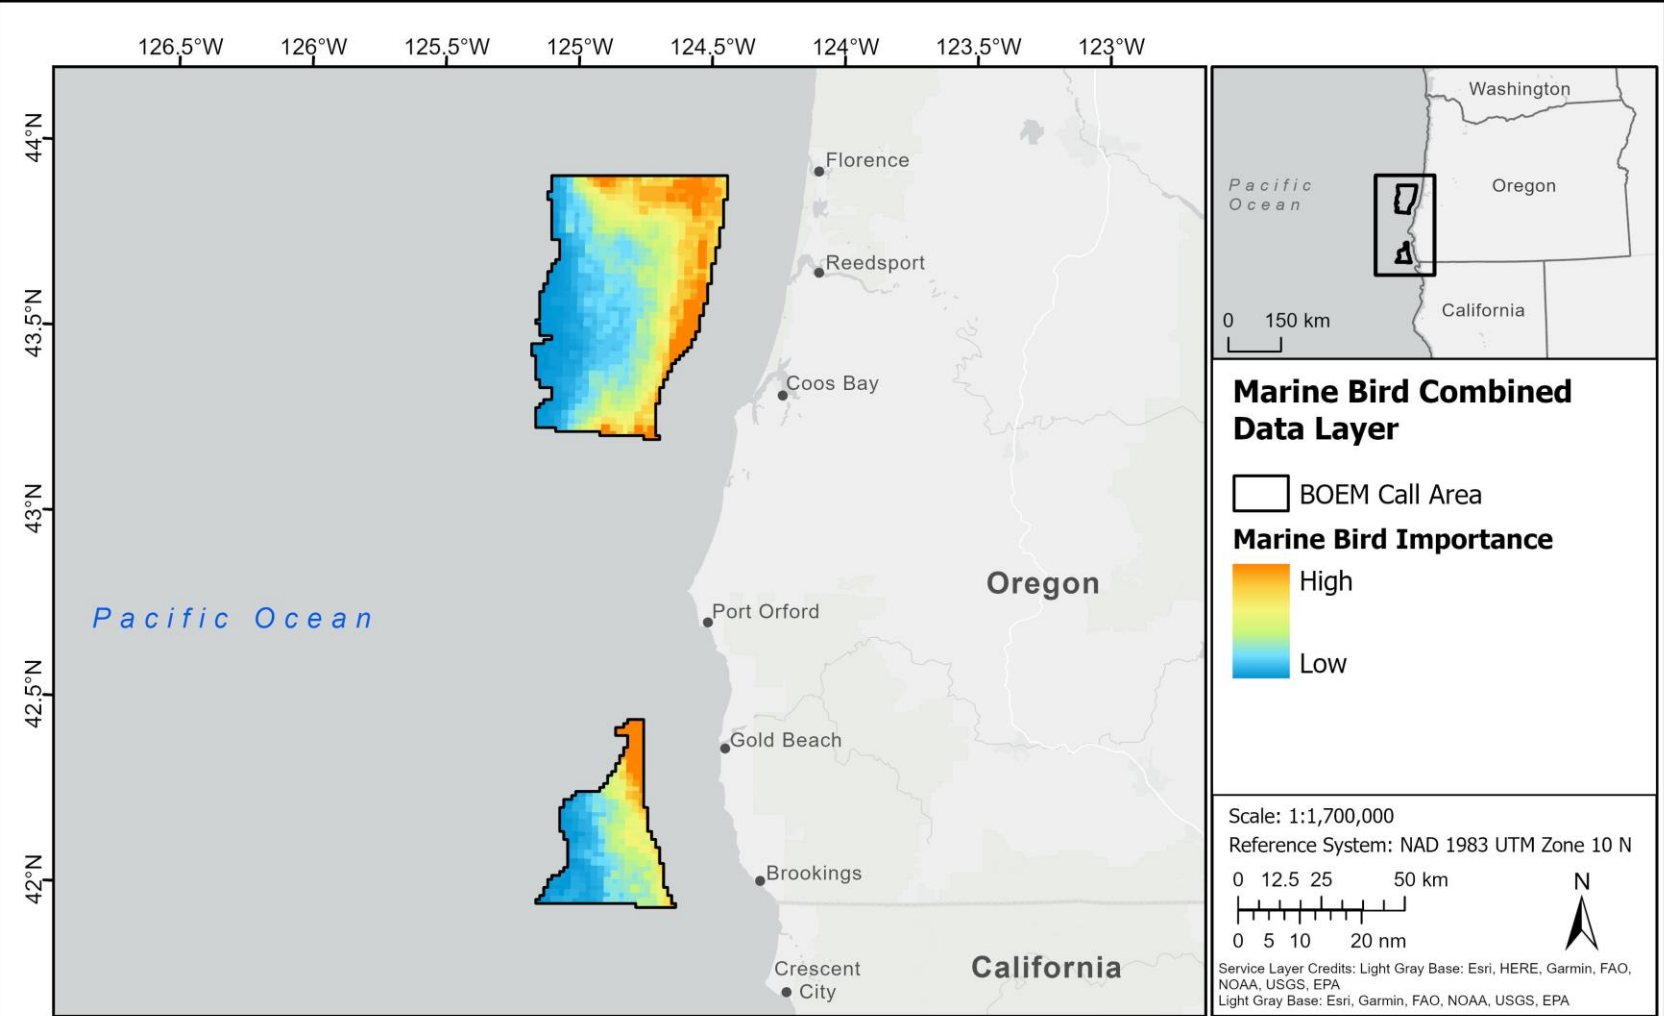

NMFS Habitat Combined Data Layer: National Marine Fisheries Service's West Coast Region and Northwest Fisheries Science Center (2022)

Natural Resources Submodel Data Inputs

Marine Birds Z-Membership Function

- 30 individual species and 12 taxonomic groups
- Utilized modeled relative density data
- Incorporated species vulnerability and sensitivity to offshore wind development

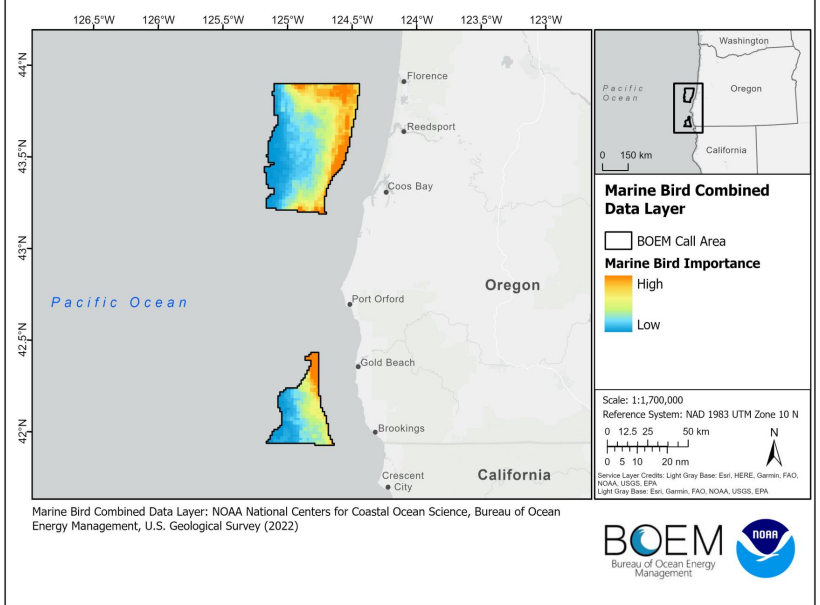

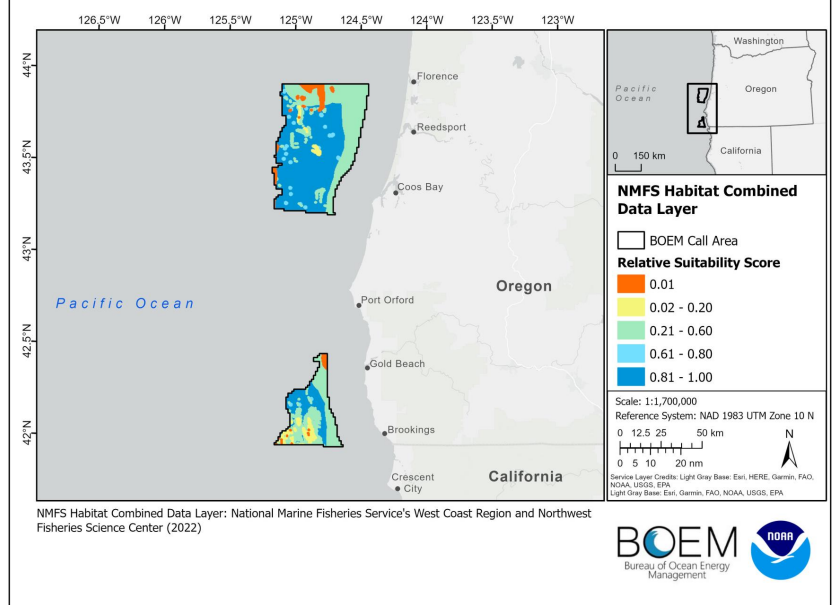

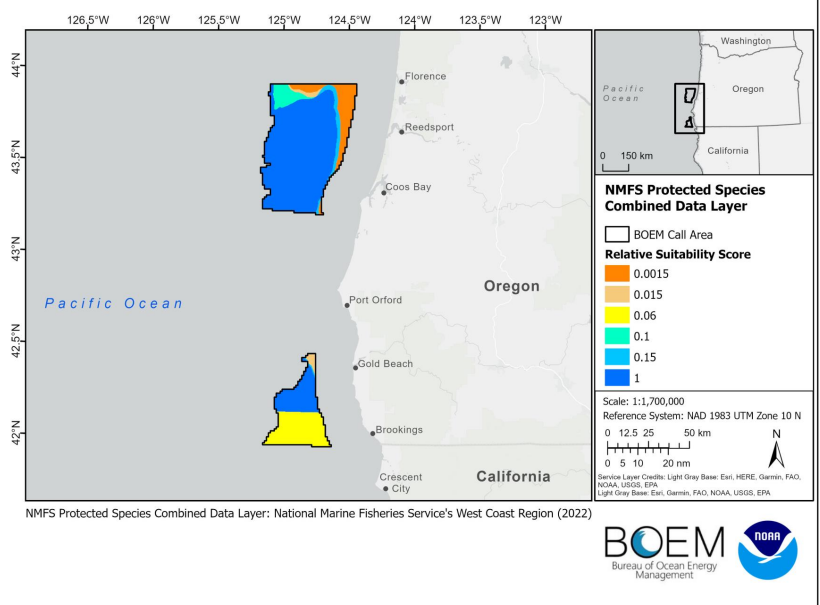

Marine Bird Combined Data Layer: NOAA National Centers for Coastal Ocean Science, Bureau of Ocean Energy Management, U.S. Geological Survey (2022)

Natural Resources Submodel Data Inputs

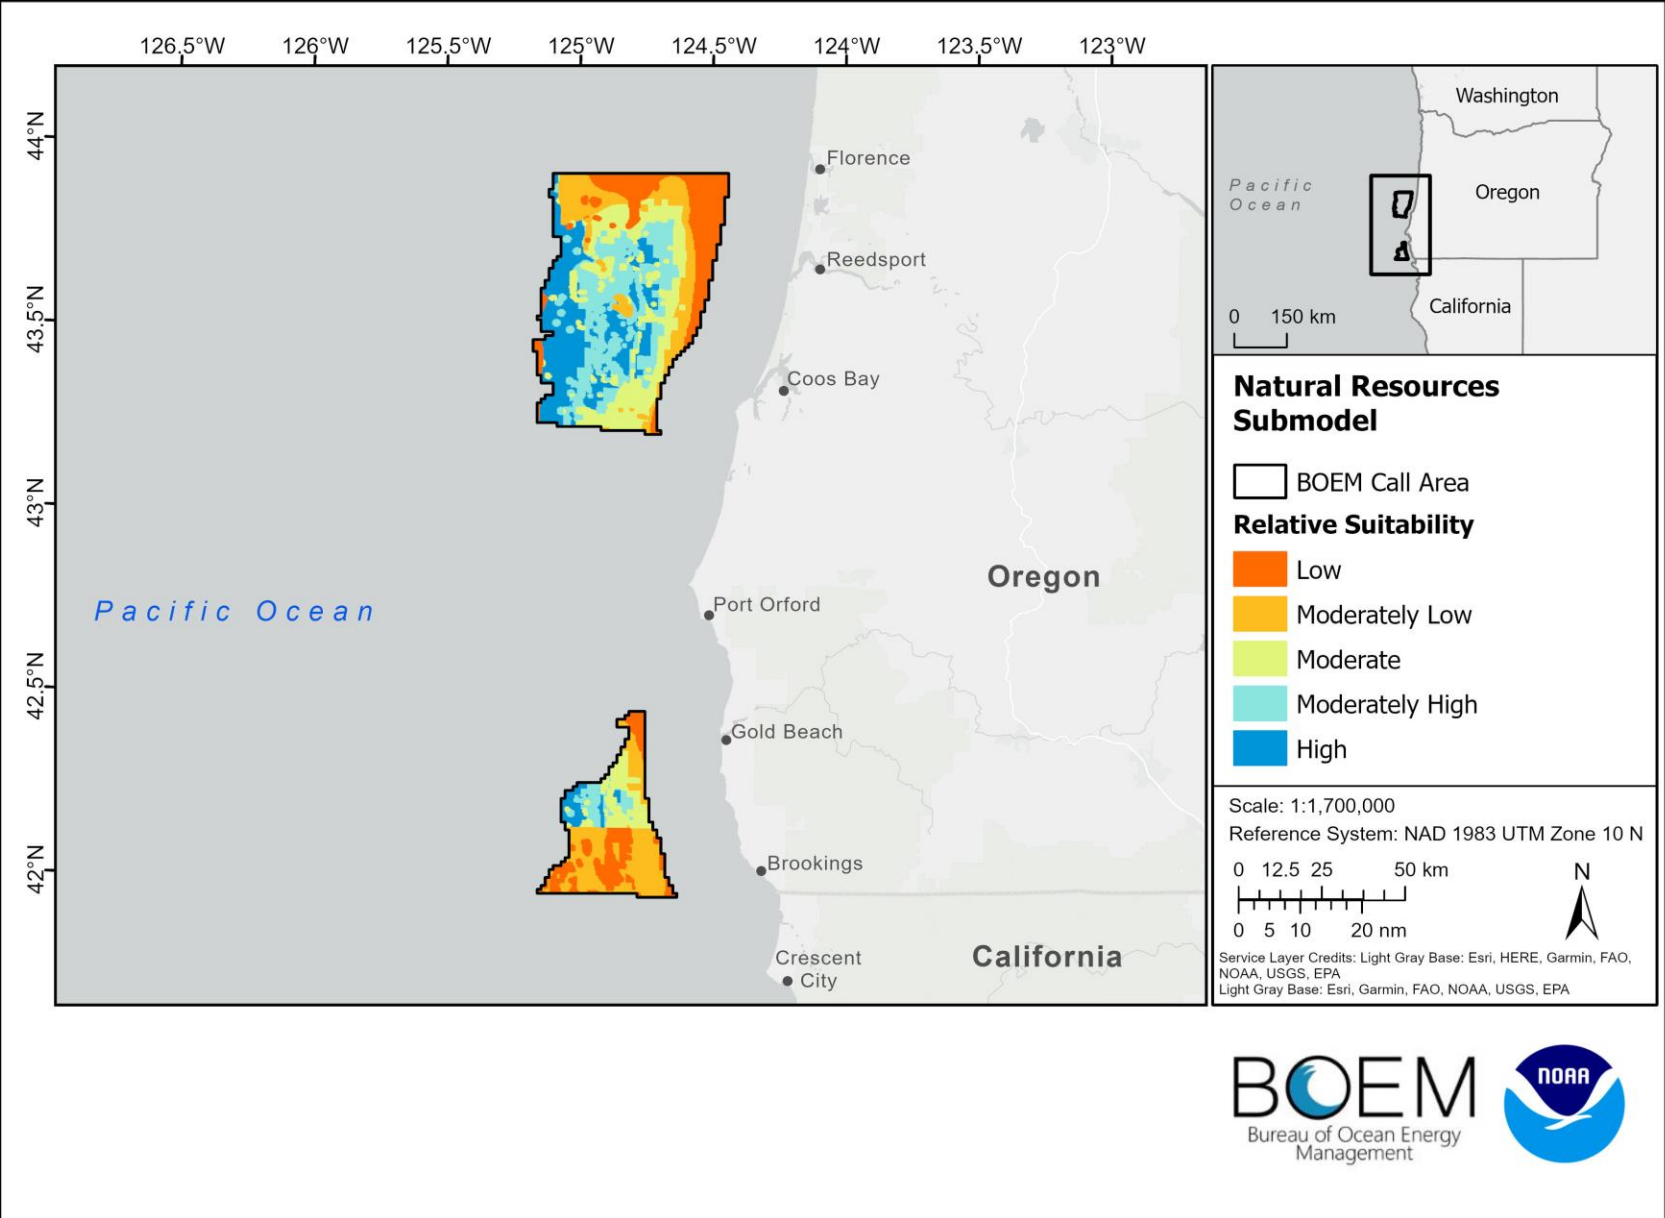

NMFS Protected Species Scoring provided by NMFS

NMFS Habitat Scoring provided by NMFS

Marine Birds Z-Membership Function

Natural Resources Submodel Results

Fisheries Submodel

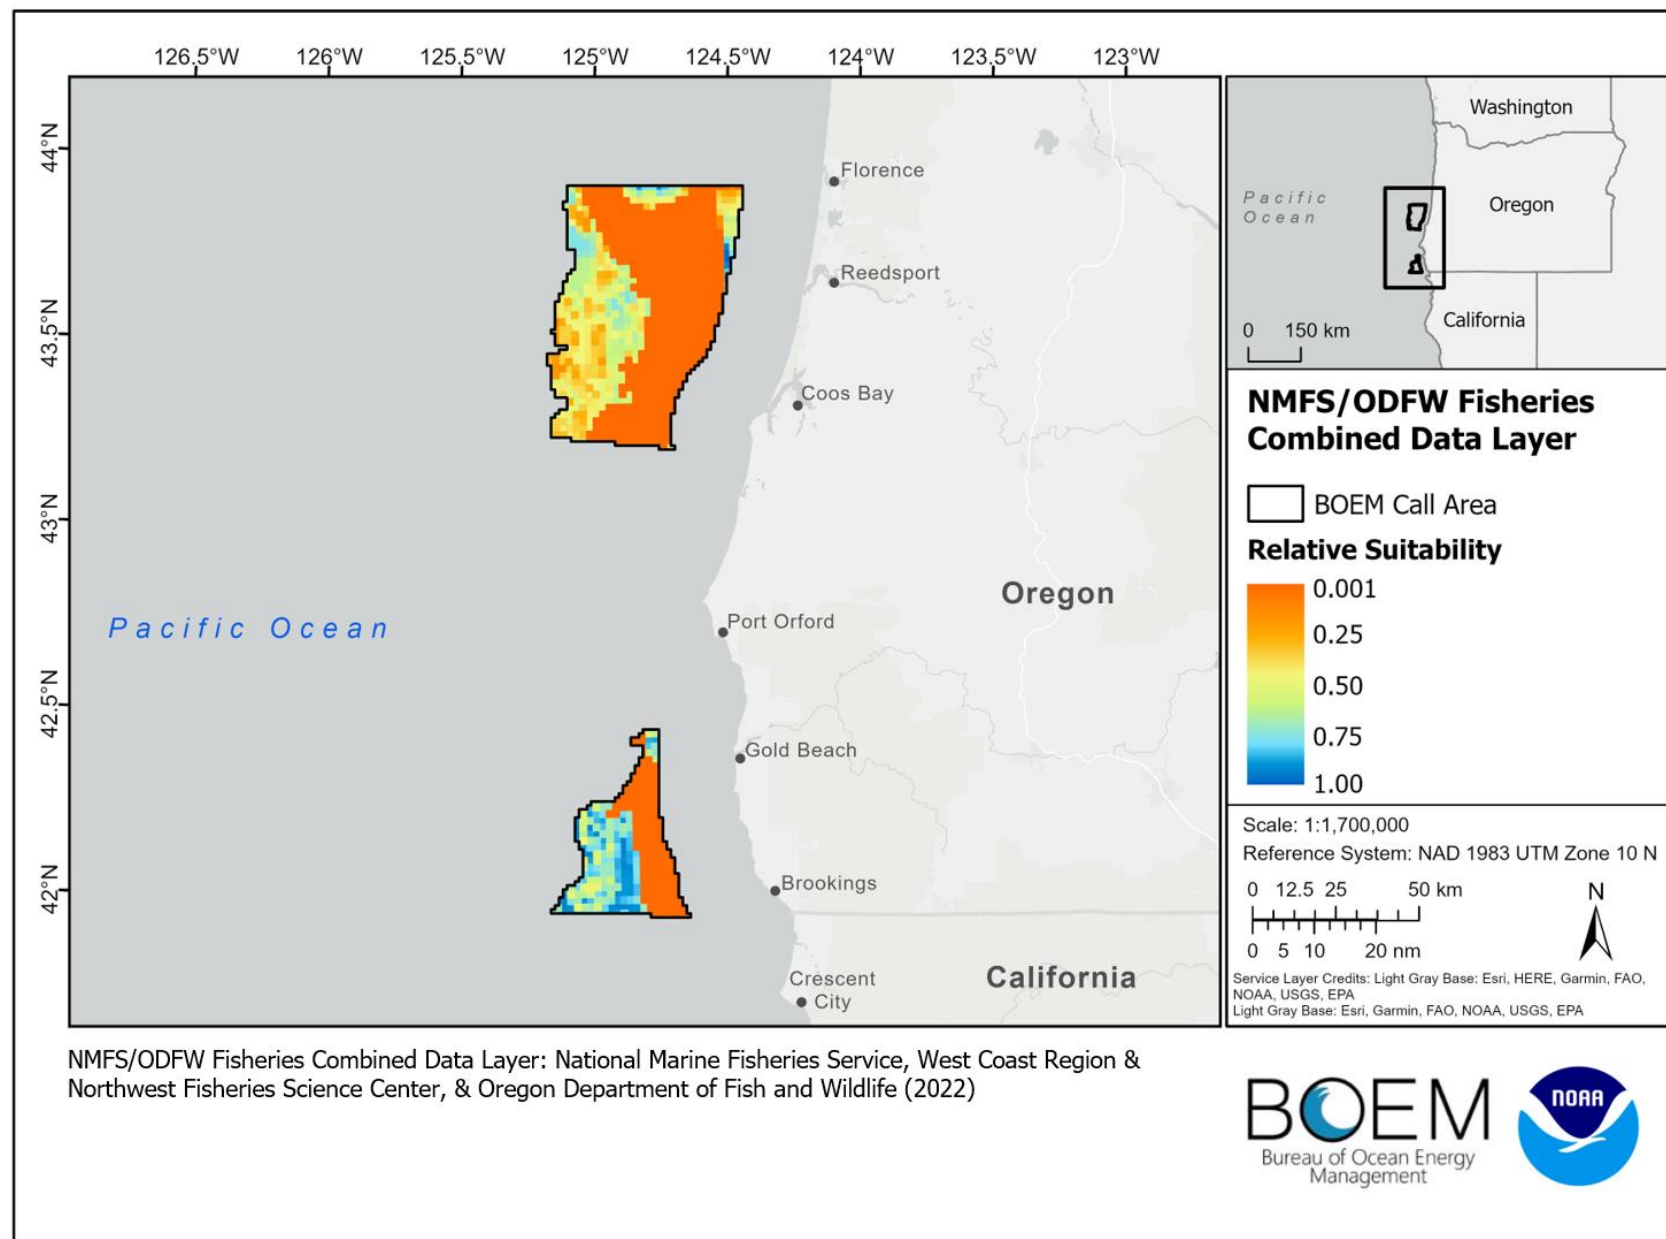

NMFS & ODFW Fisheries Combined Data Layer

Fisheries Submodel Data Inputs

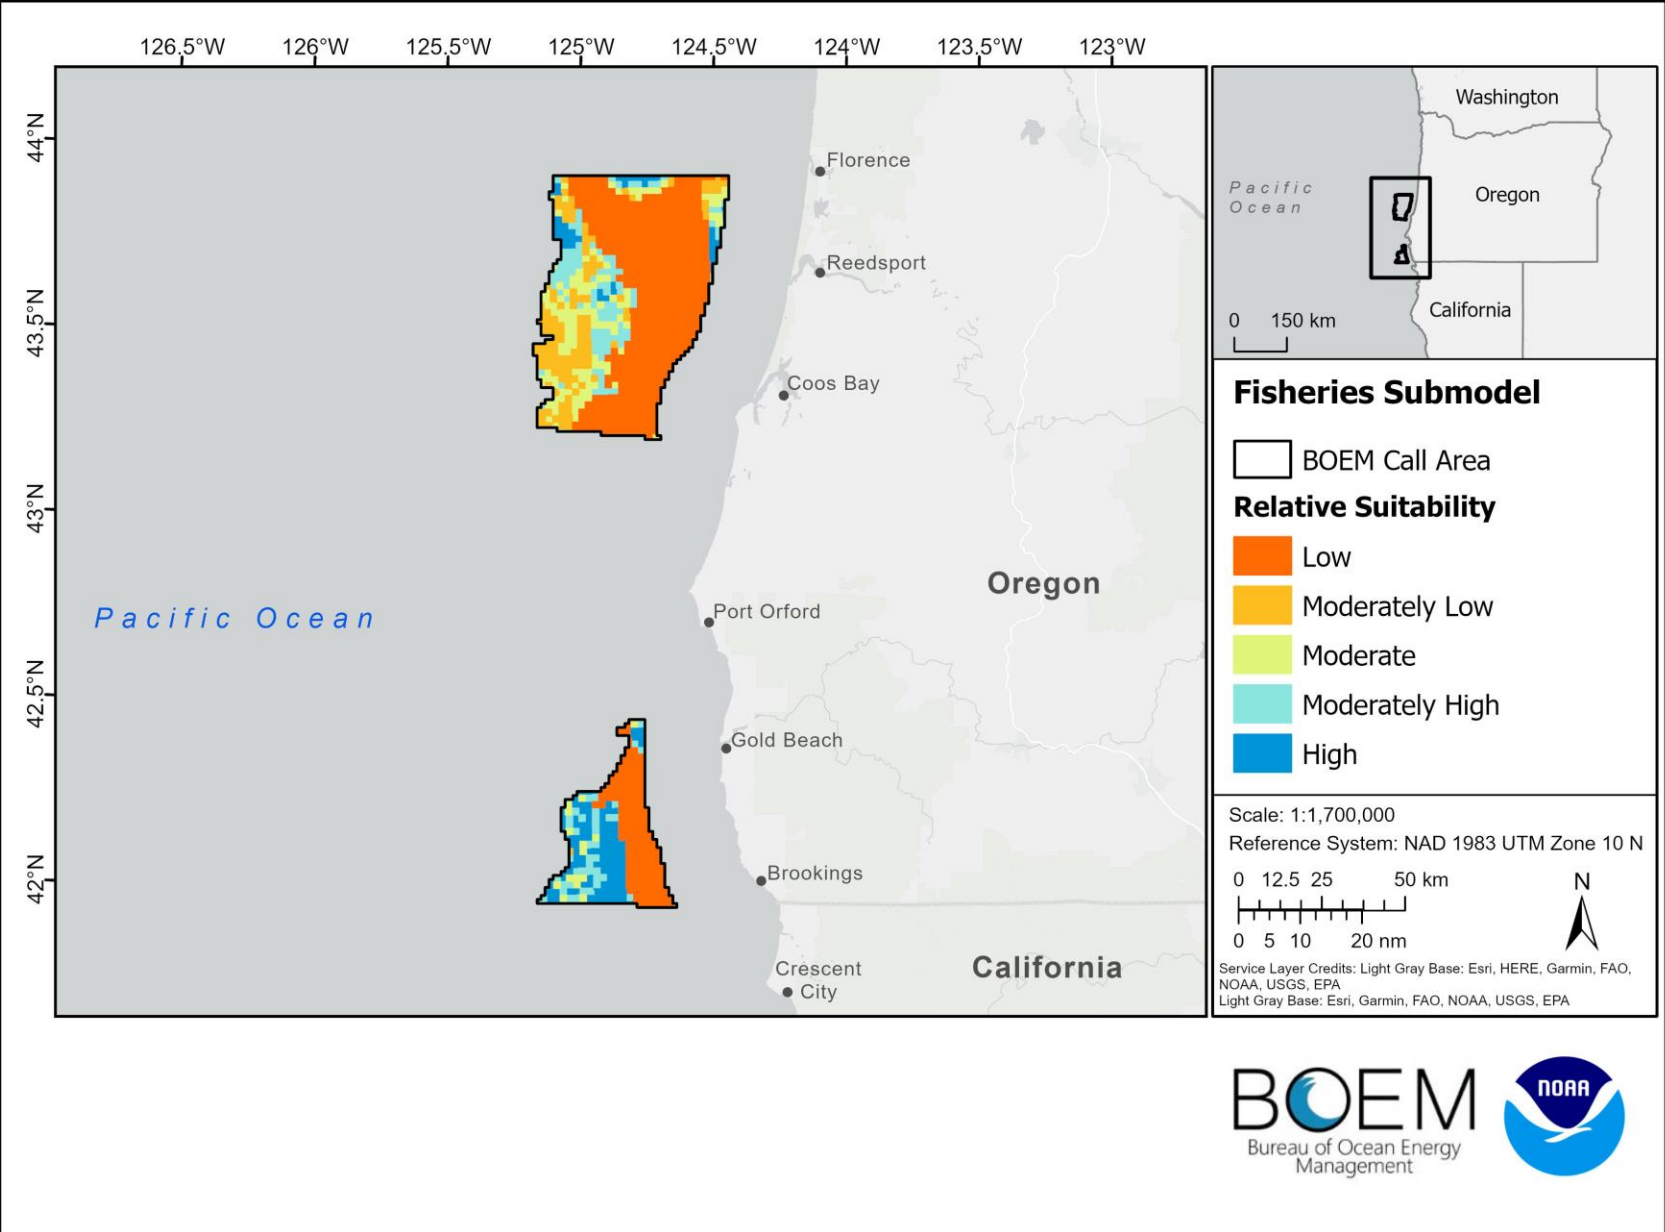

NMFS & ODFW Fisheries Scoring provided by NMFS & ODFW

Fisheries included:

- At-sea Hake mid-water trawl
- Shoreside Hake mid-water trawl
- Groundfish bottom trawl
- Groundfish longline
- Groundfish pot gear
- Pink shrimp trawl
- Dungeness crab
- Albacore commercial troll/hook-and-line
- Albacore charter troll/hook-and-line

Fisheries Submodel Results

Final Suitability Results

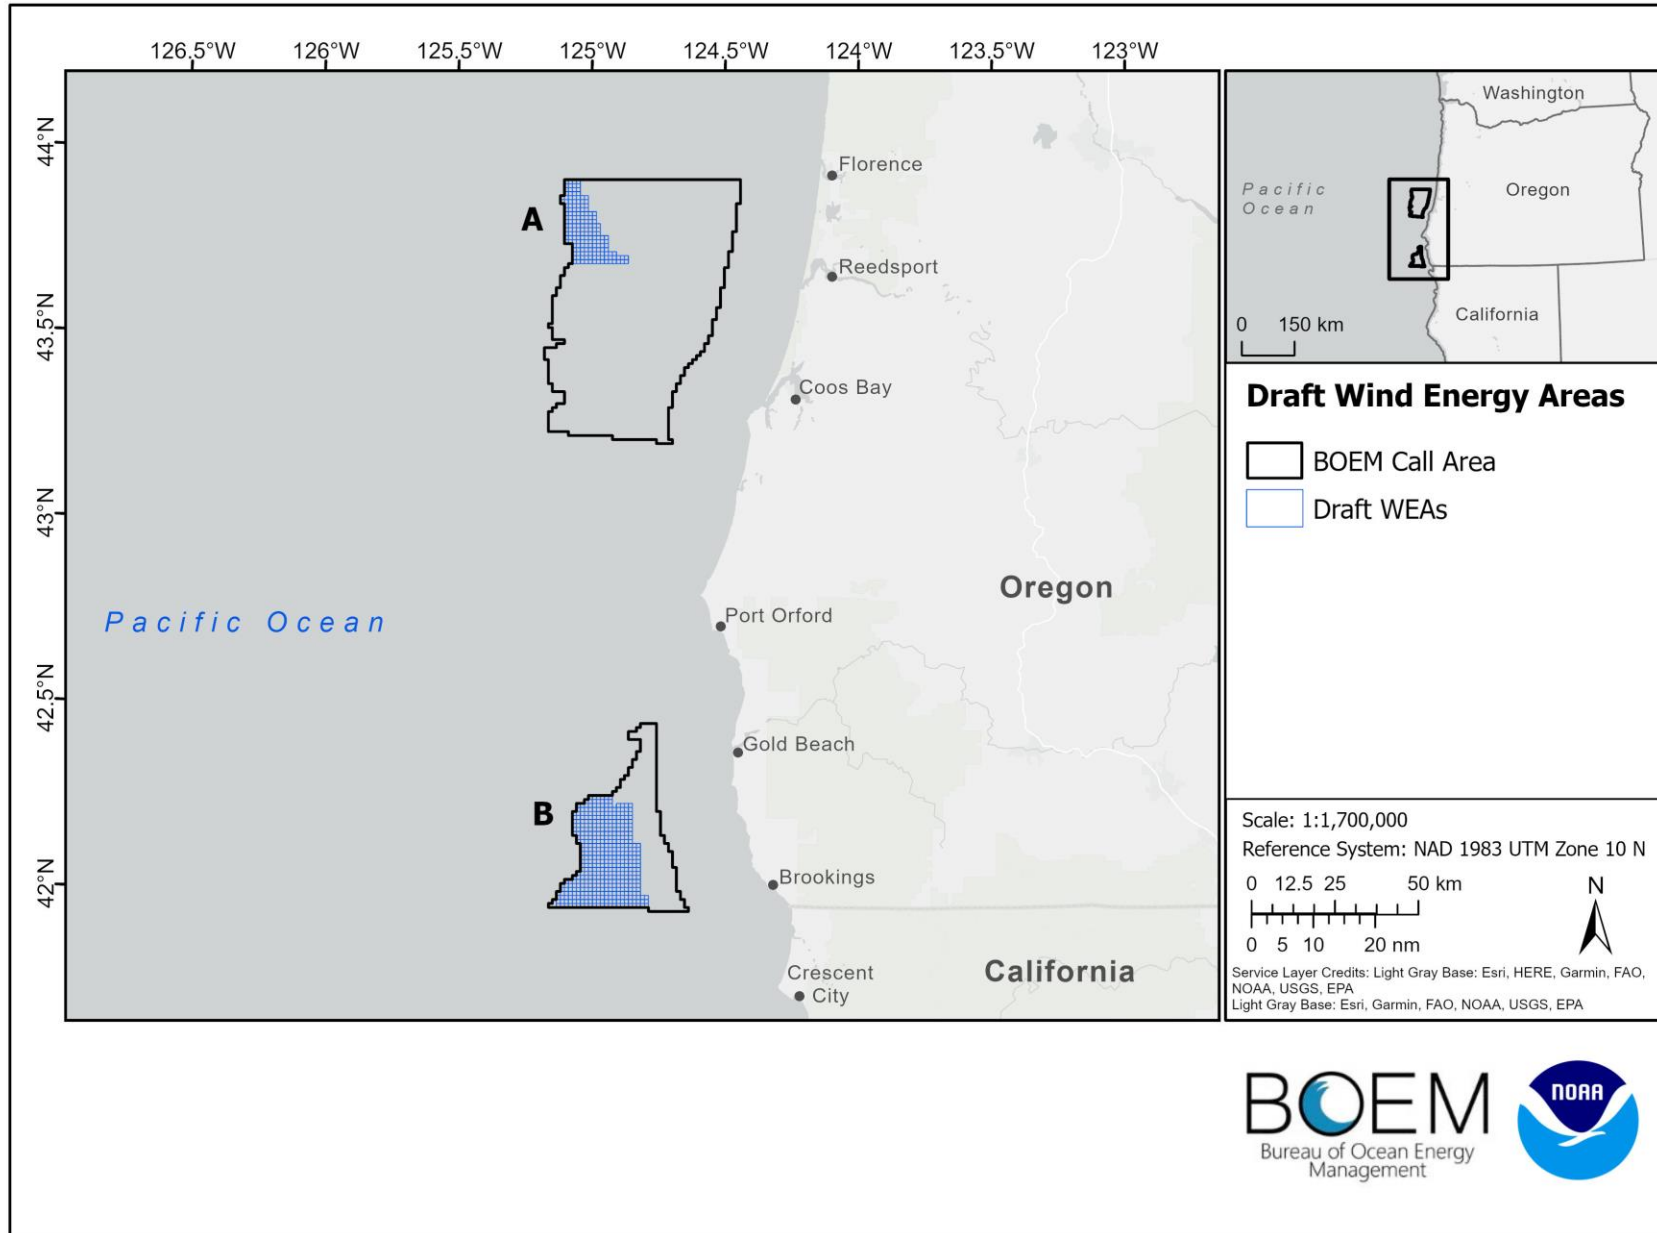

Cluster Analysis Results

Rules for identifying WEAs

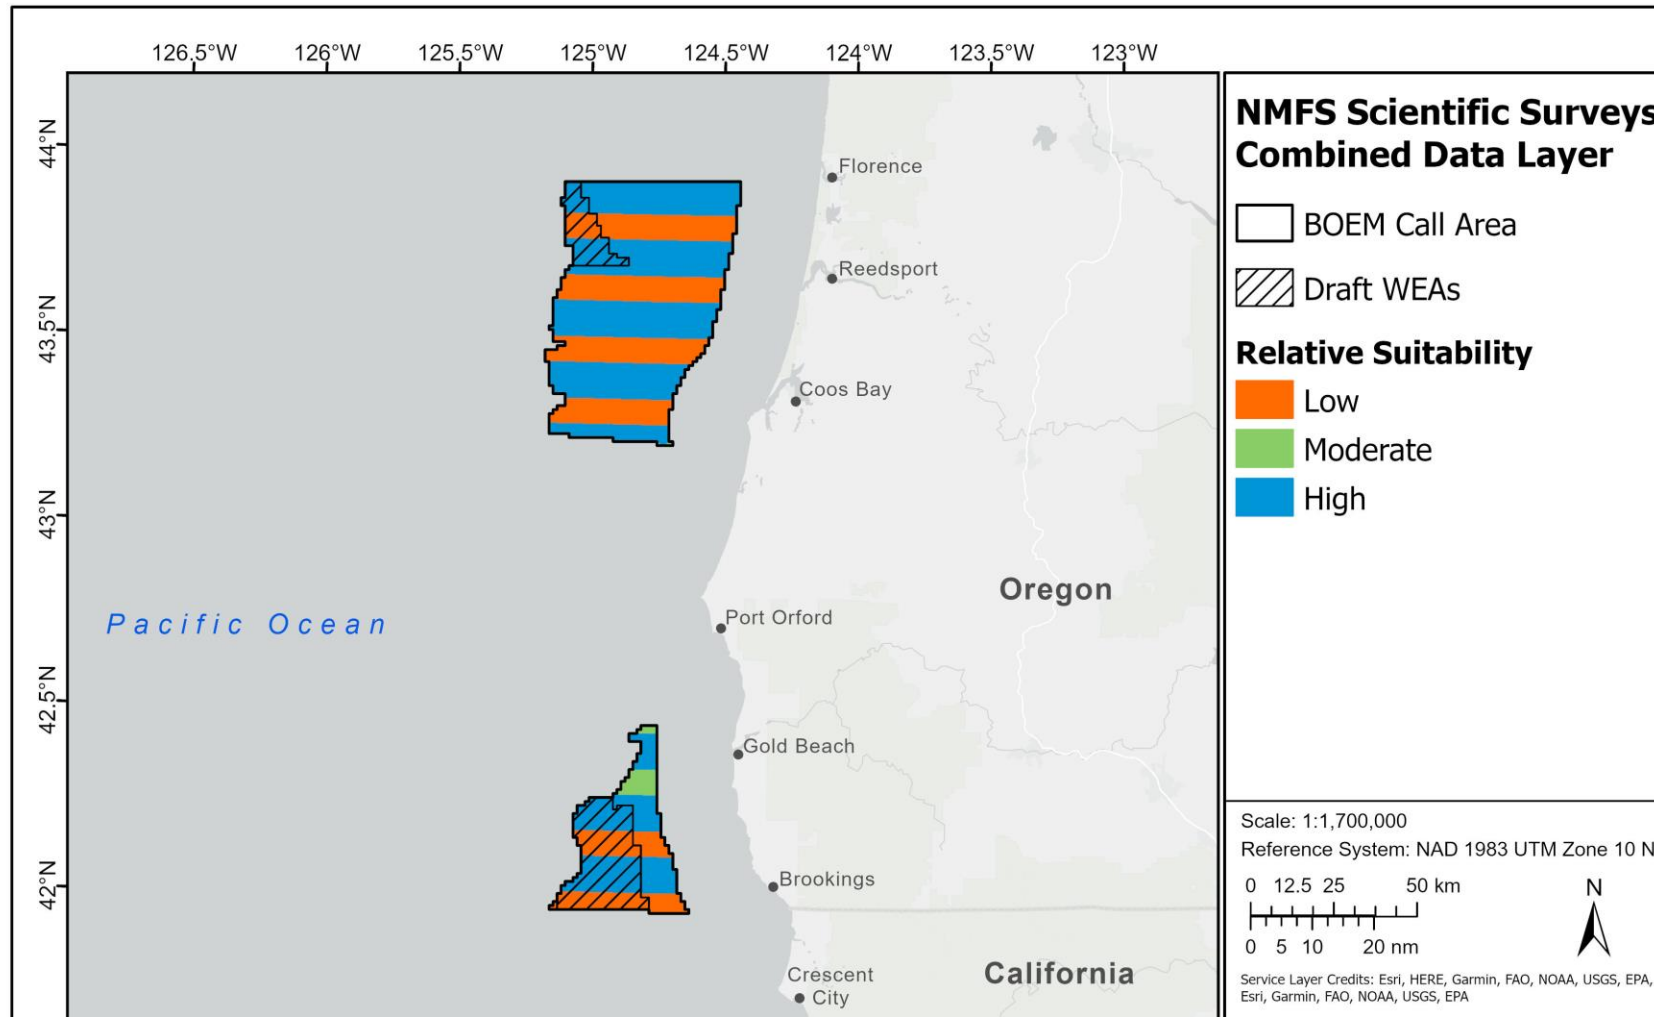

- BOEM aliquots that intersect with a high cluster grid cell are selected
- Groups of aliquots less than 55,000 acres are removed
- Additional aliquots were included if they were fully encircled by the selected aliquots

Oregon Draft Wind Energy Areas

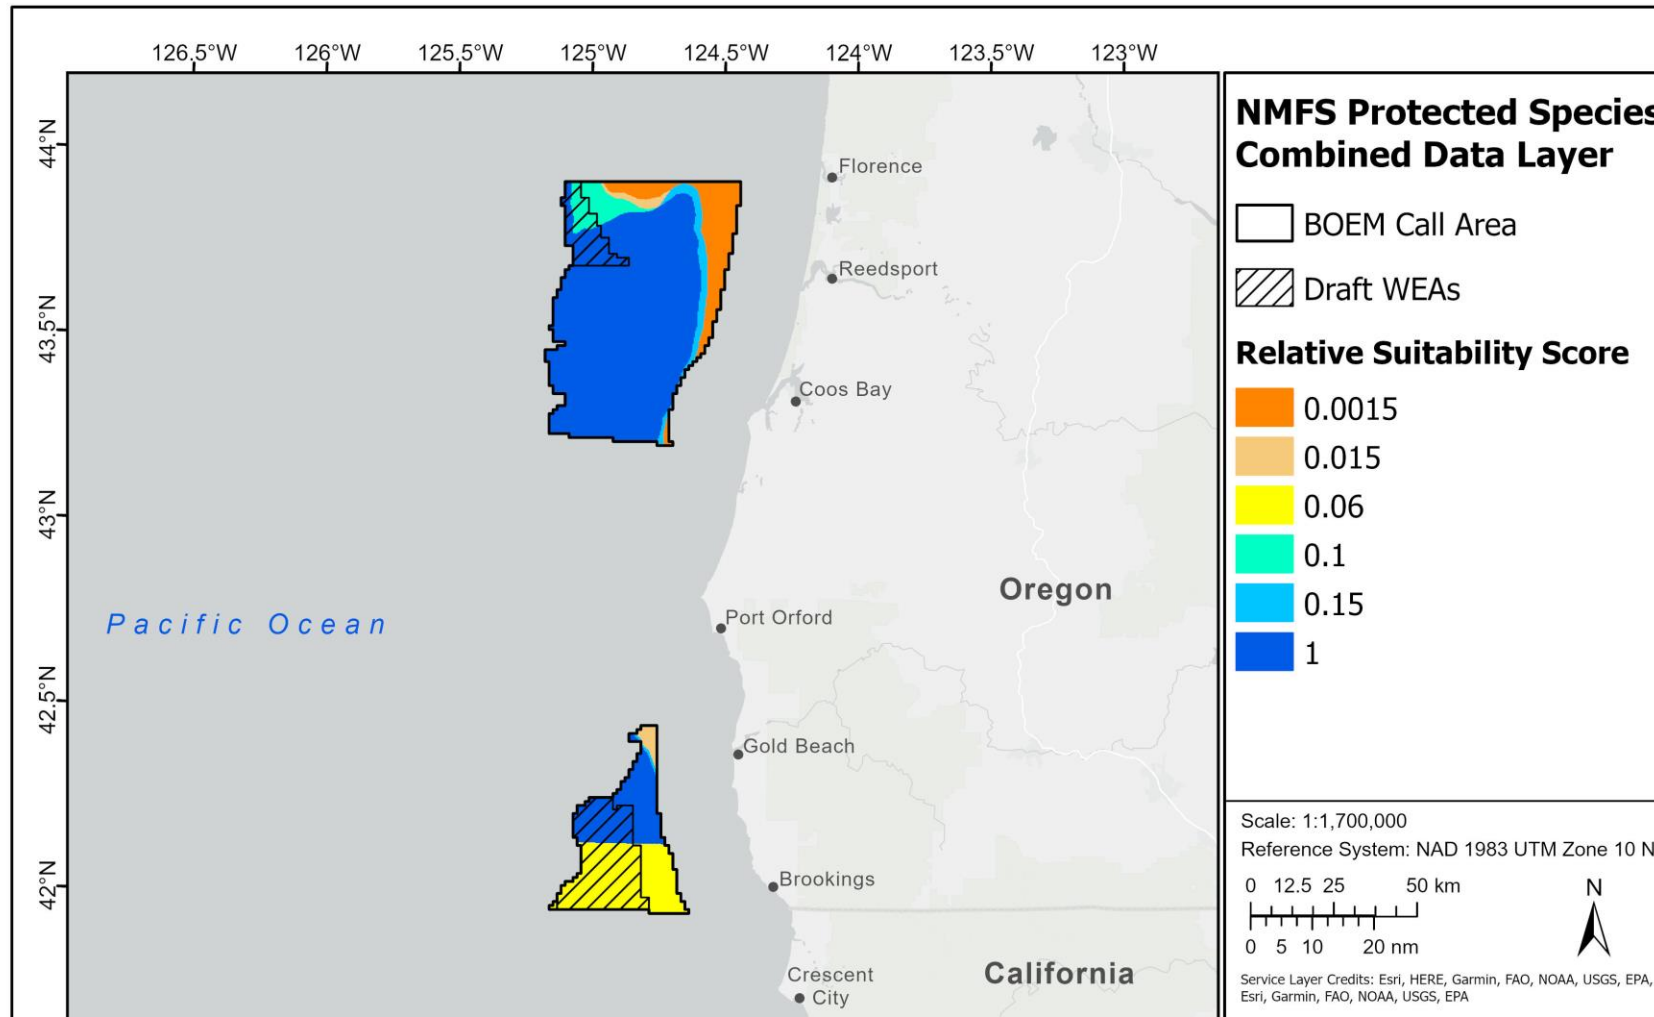

Draft Wind Energy Areas and NMFS Scientific Surveys

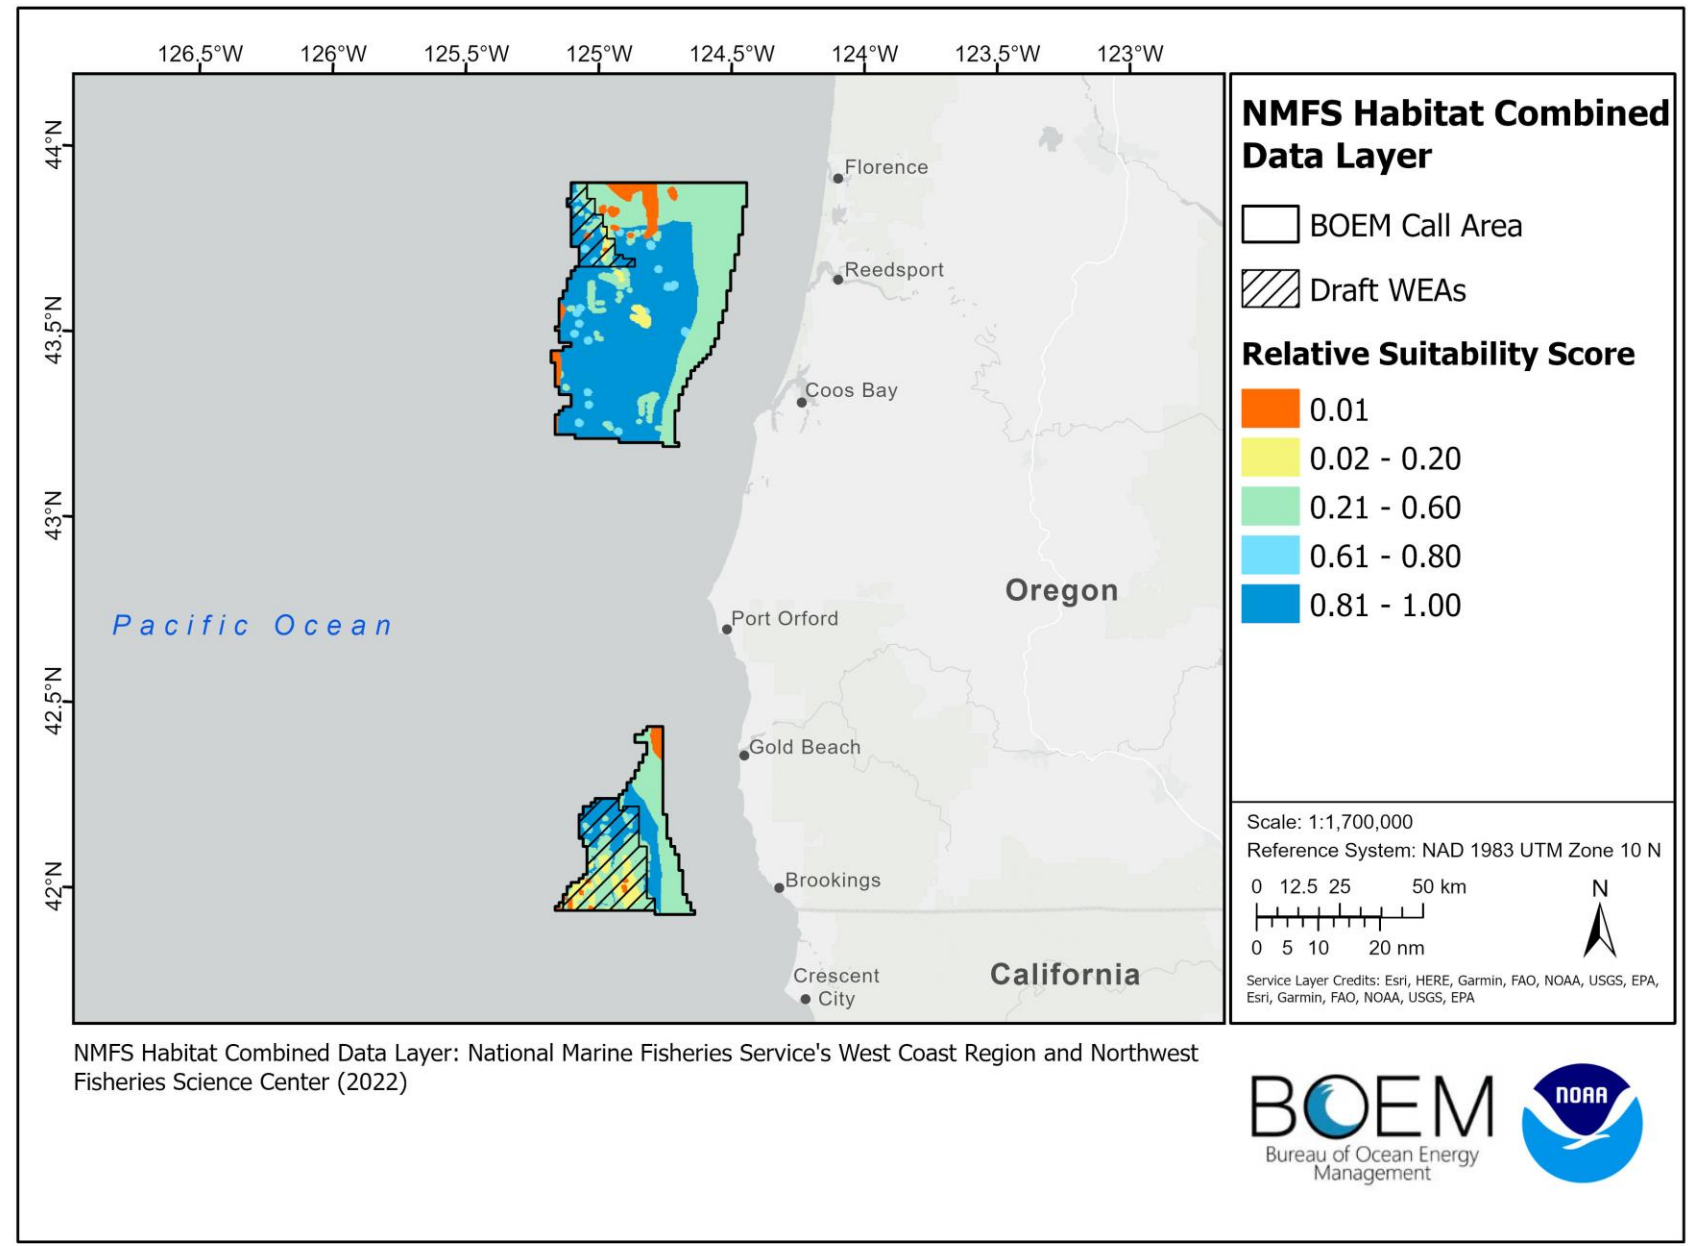

NMFS Scientific Surveys Combined Data Layer: National Marine Fisheries Service's Northwest & Southwest Fisheries Science Centers (2022)

Draft Wind Energy Areas and NMFS Protected Species

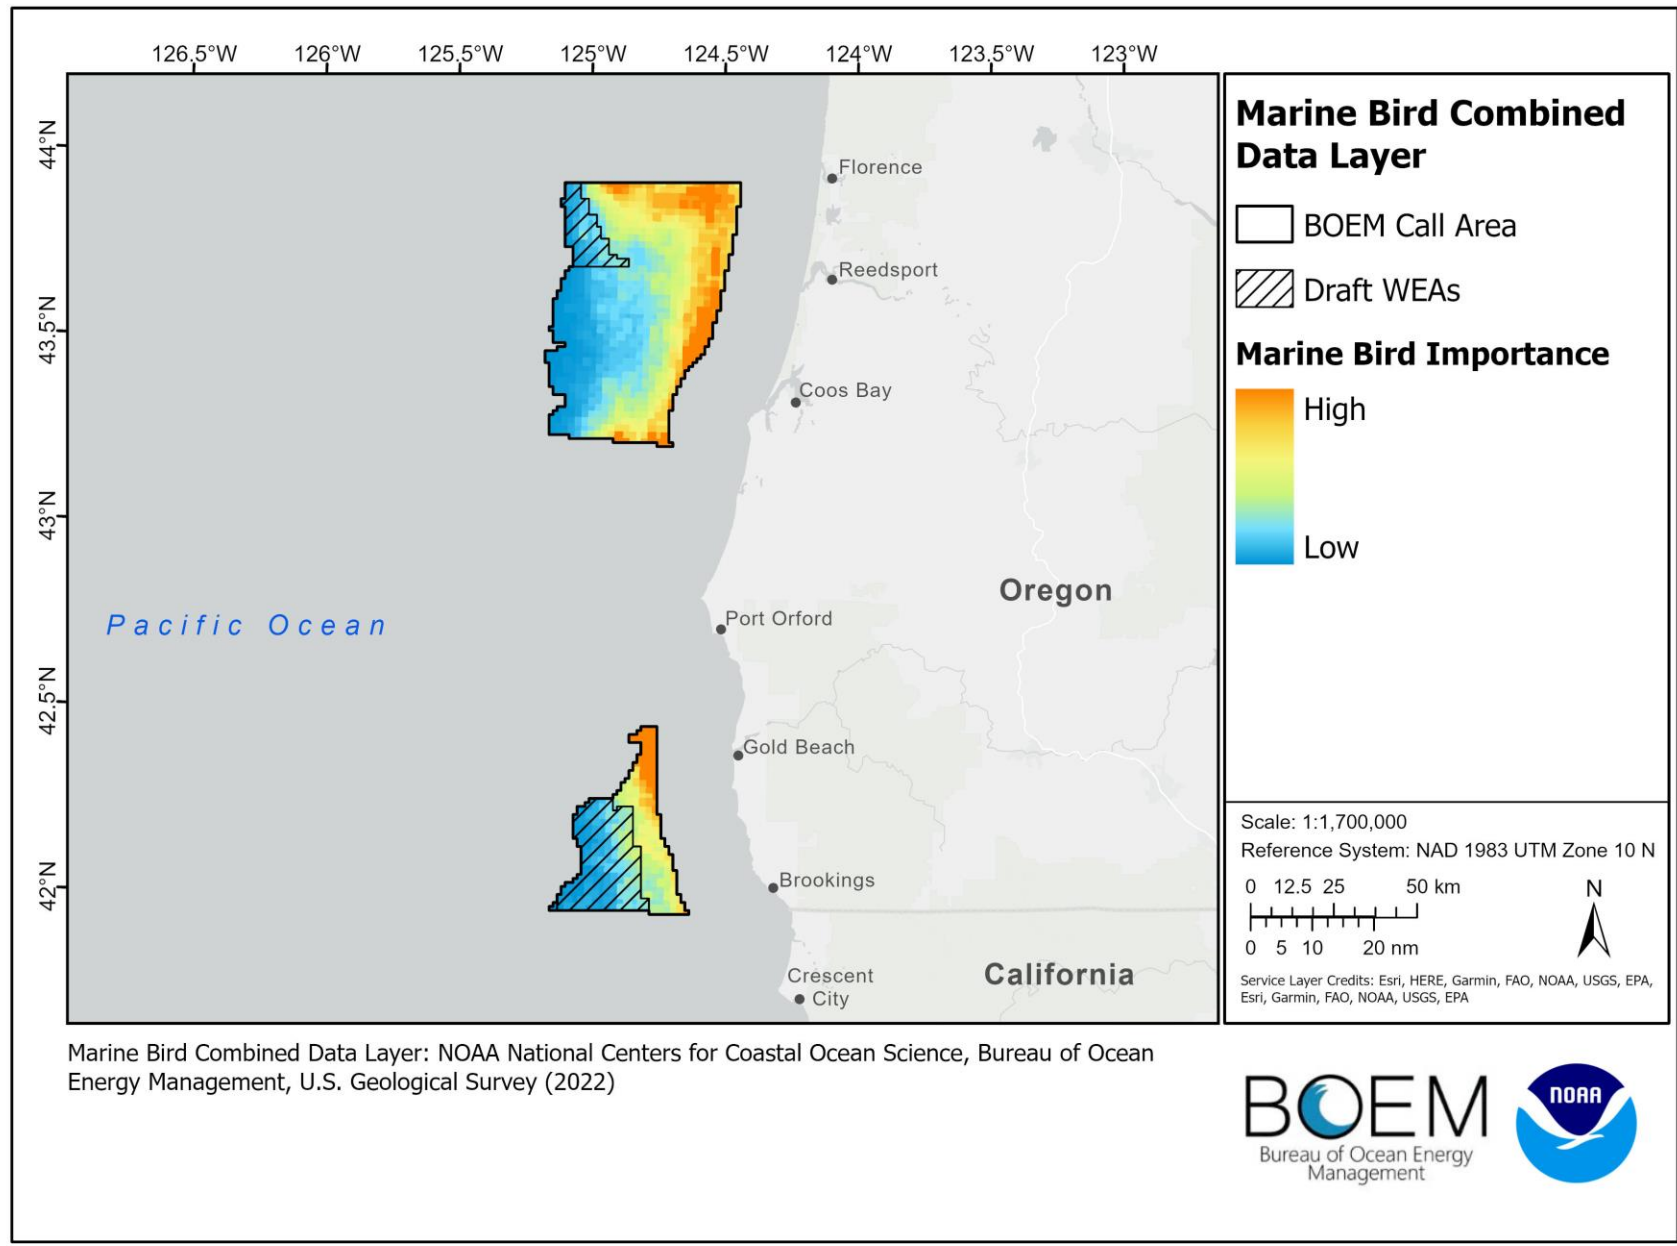

NMFS Protected Species Combined Data Layer: National Marine Fisheries Service's West Coast Region (2022)

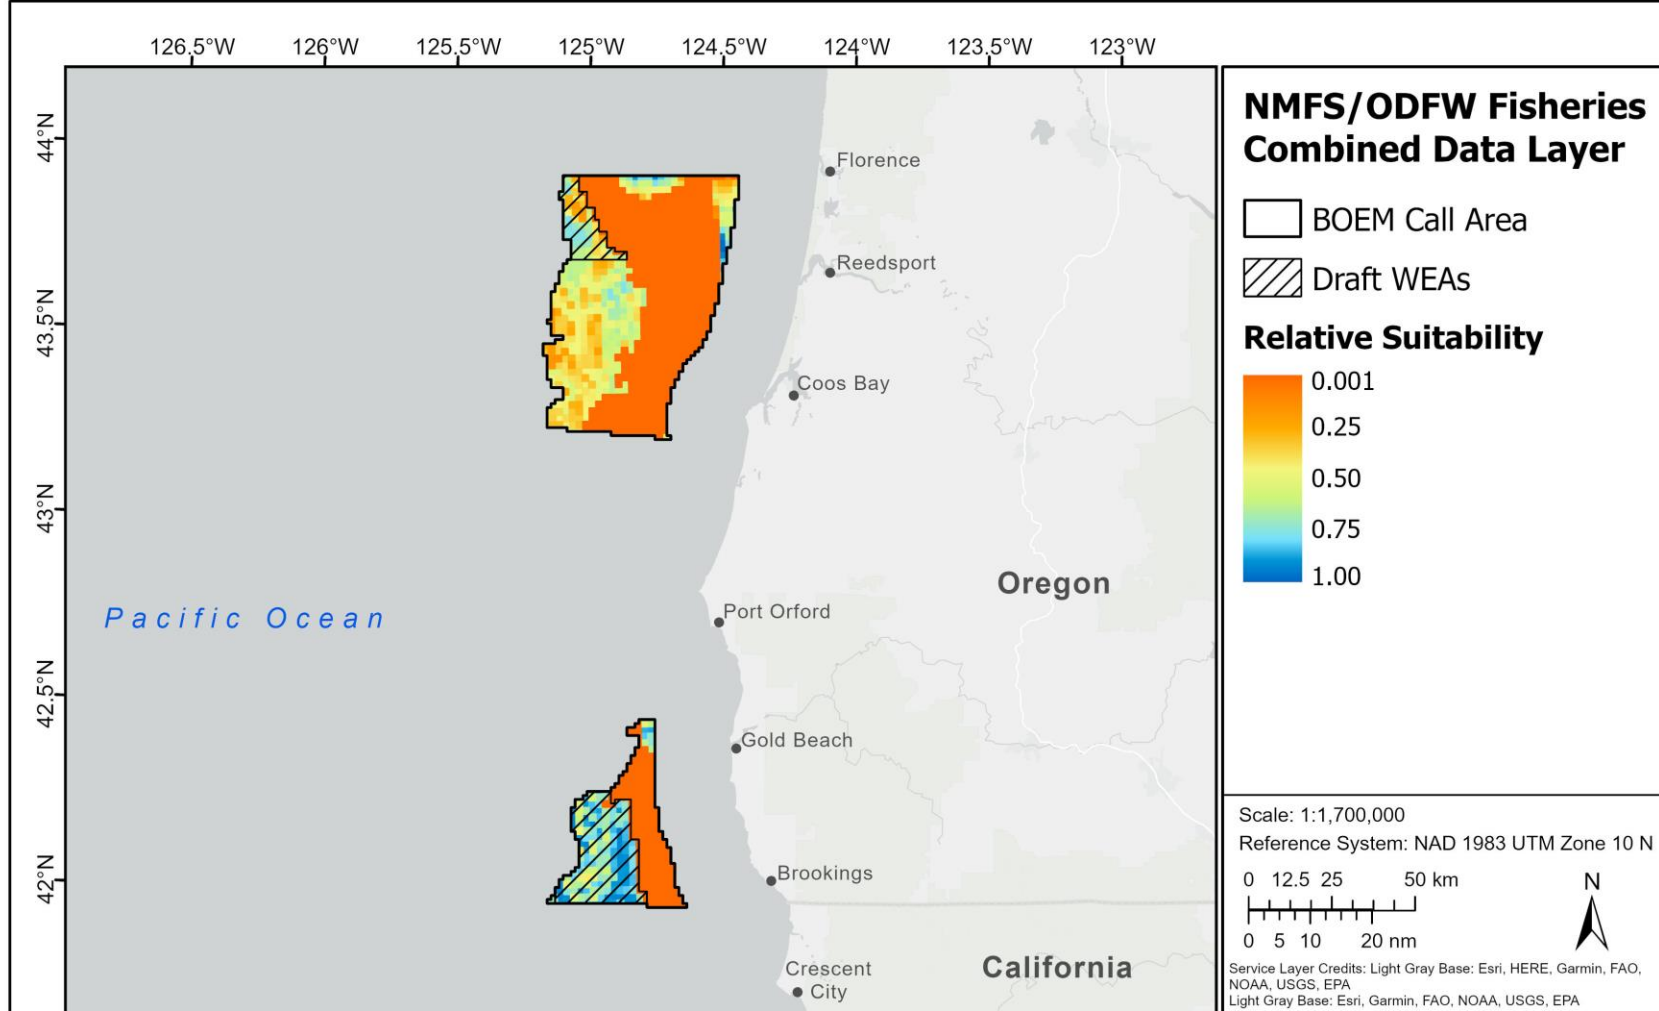

Draft Wind Energy Areas and NMFS Habitat

Draft Wind Energy Areas and Marine Birds

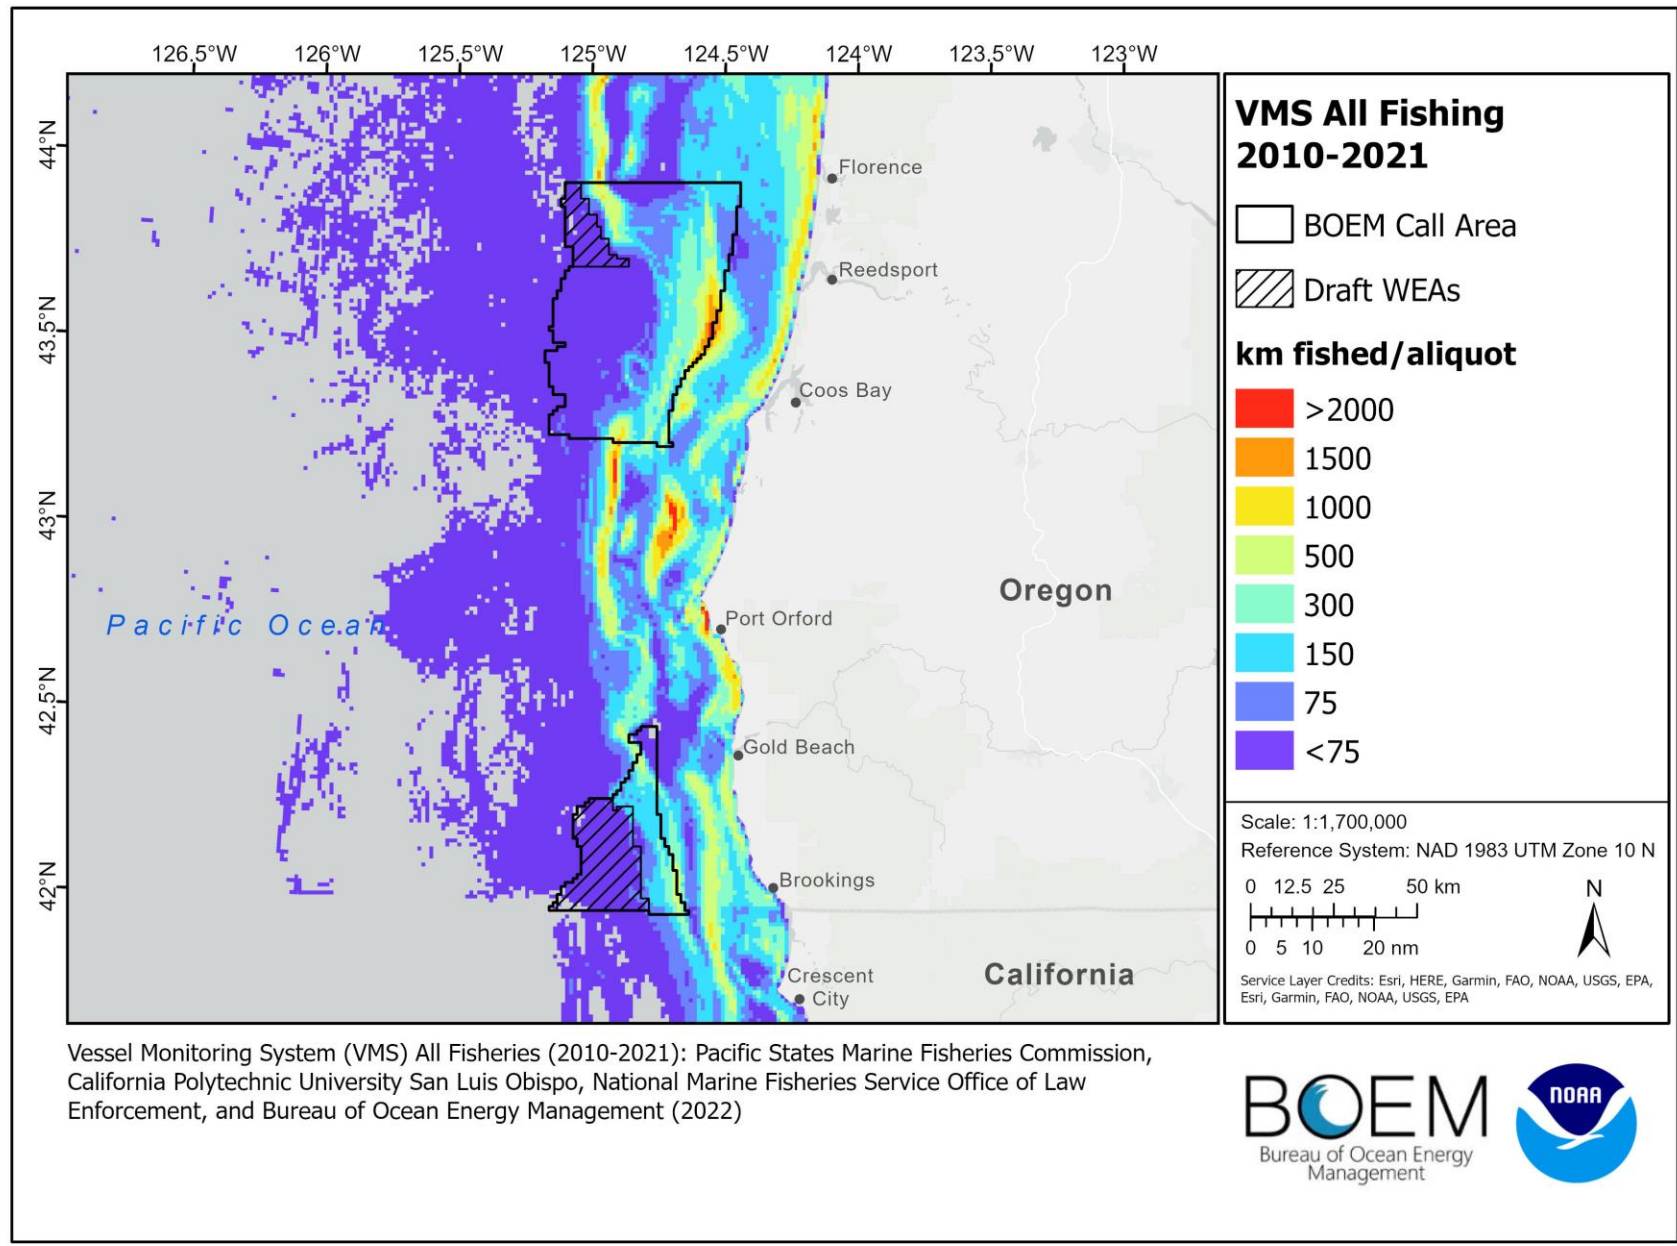

Draft Wind Energy Areas and NMFS & ODFW Fisheries

NMFS/ODFW Fisheries Combined Data Layer: National Marine Fisheries Service's West Coast Region and Northwest Fisheries Science Center, and Oregon Department of Fish and Wildlife (2022)

Draft Wind Energy Areas and VMS Fisheries

Next Steps in BOEM's Renewable Energy Authorization Process

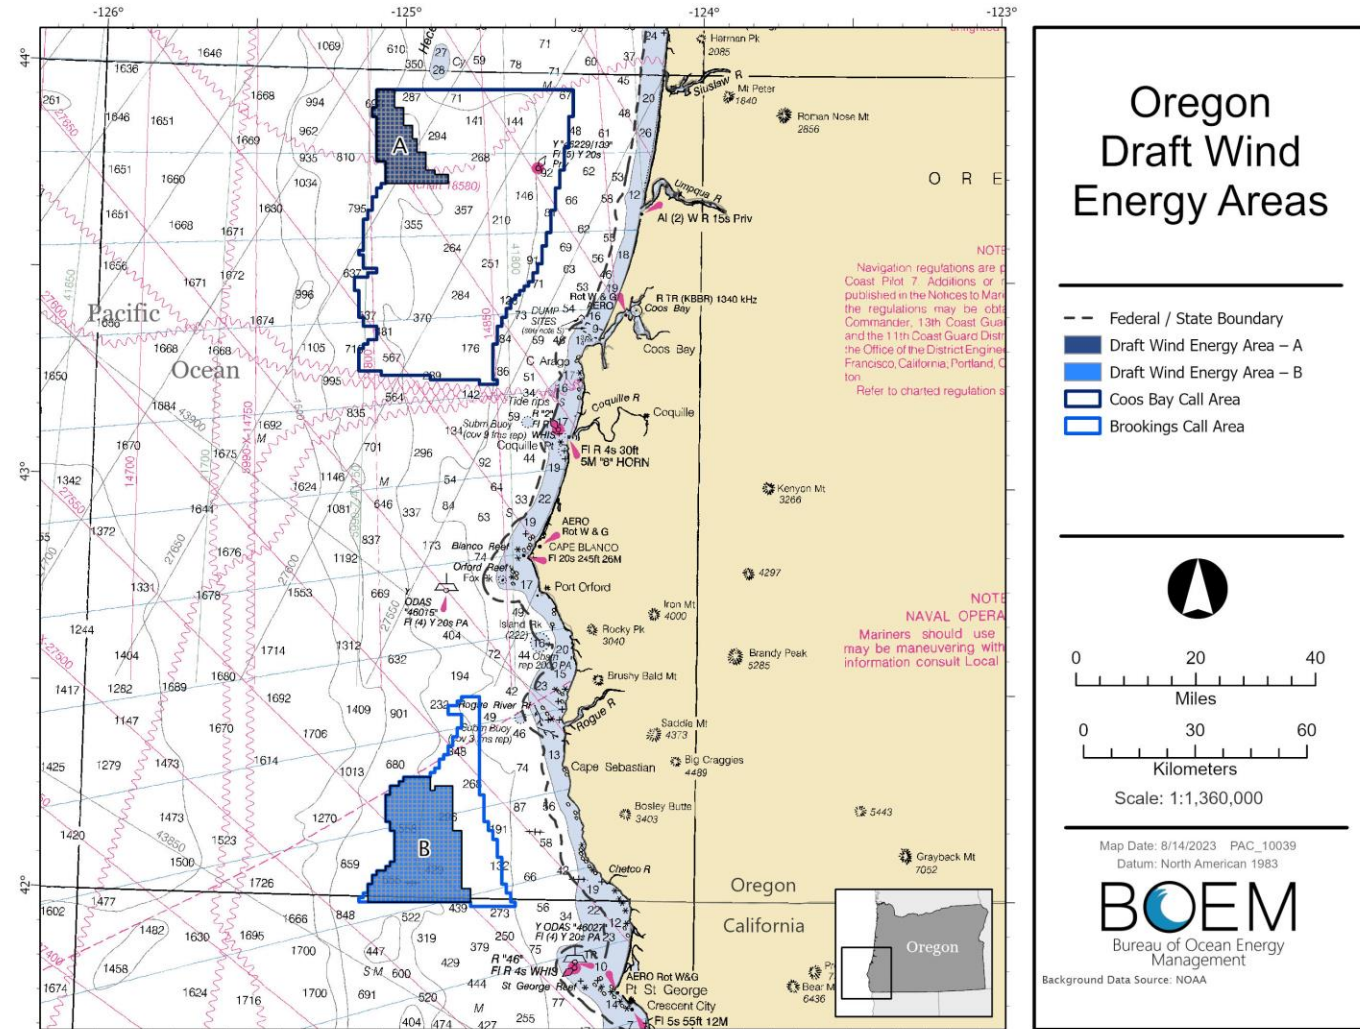

Oregon Draft Wind Energy Areas

- Draft WEA – A (Coos Bay Call Area)

- 61,204 acres
- ~740 MW
- 32 miles nearest to shore
- 40 miles to Port of Coos Bay

- Draft WEA – B (Brookings Call Area)

- 158,364 acres
- ~1,920 MW
- 18 miles to shore
- 23 miles to Port of Brookings

Next Steps in the BOEM Wind Energy Authorization Process

Draft Wind Energy Areas Published on BOEM website for Public Comment

- On Aug 15, 2023, BOEM published a Request for Comments on BOEM website
- Comment period is open for 60-day public comment period
- Comments through Regulations.gov, [docket number BOEM-2023-0033](#)
- Supporting Documents available on BOEM website: Completed visual simulations, NCCOS Modeling Report, maps and shapefiles of the Draft WEAs

Recent Stakeholder Engagement

- Aug 30, 2023: PFMC Coastal Pelagic Species Advisory Subpanel meeting
- Sept 1, 2023: PFMC Marine Planning Committee meeting

Upcoming Engagement Opportunities

- Sept 11, 2023: Pacific Fishery Management Council Meeting, General Session
- Sept 18, 2023: BOEM Oregon Intergovernmental Renewable Energy Task Force Meeting
- TBD: Fishing Industry Informational Webinar
- TBD: (3) Public Meetings – Coastal Oregon
- Continued Consultation with Tribes

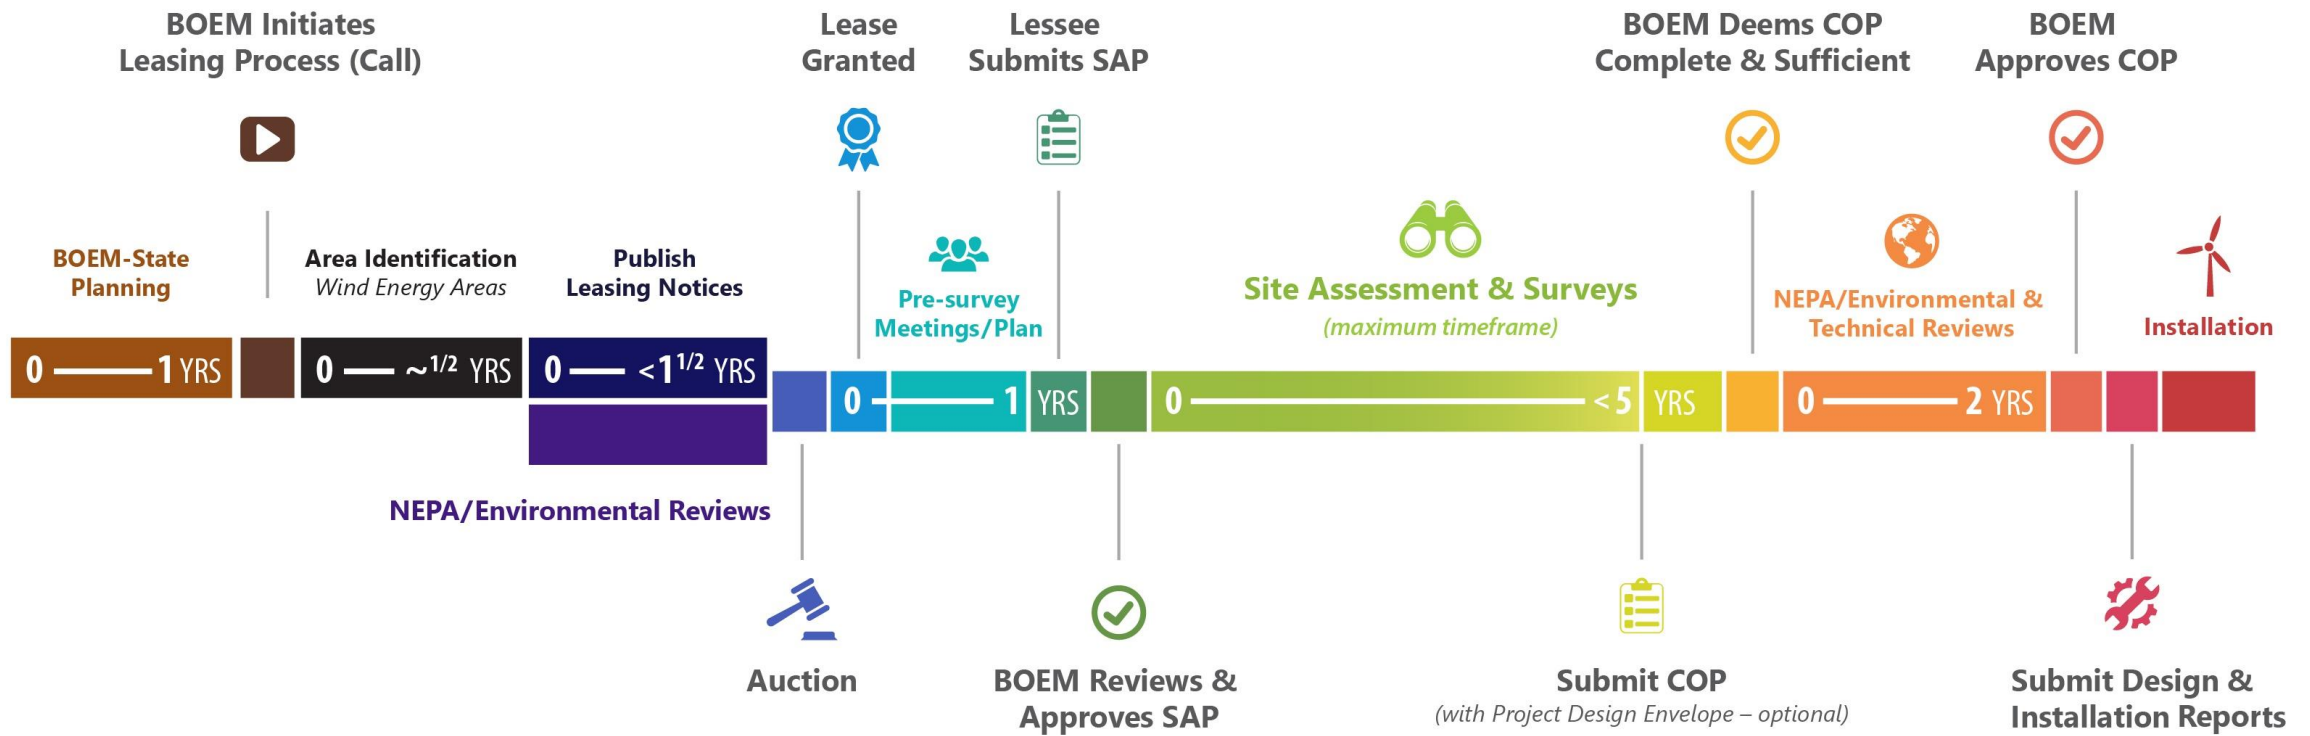

Next Steps After Close of Draft Wind Energy Areas Comment Period
