

## SCHEMATIC FOR SABLEFISH ALTERNATIVE 3 HARVEST CONTROL RULE

The Groundfish Management Team (GMT) understands there is some confusion over sablefish default harvest control rule (HCR) Alternative 3 as shown in Table of 2, row 4 of [Agenda Item G.6.a Supplemental GMT Report 1, September 2023](#), specifically ABC P\* 0.40 with sub-ACLs for North and South.

The GMT provides the attached figure to show the concept. The GMT notes this is a conceptual diagram and is informational only. The GMT would only explore this alternative HCR if the Council were to adopt Alternative 3 as part of the range of HCRs for analysis.
