

SALMON ADVISORY SUBPANEL REPORT ON
GREATER FARALLONES AND MONTEREY BAY NATIONAL MARINE SANCTUARIES
CORAL RESORATION AND RESEARCH PLAN – SCOPING

The Salmon Advisory Subpanel (SAS) reviewed the material provided under this agenda item and makes the following comment:

The gear types used in salmon fisheries are historically non-bottom contact gear types and therefore the SAS formally requests that commercial salmon troll and recreational salmon gear types be removed from any further scoping for this project.
