

SALMON TECHNICAL TEAM REPORT ON  
NATIONAL MARINE FISHERIES SERVICE REPORT INCLUDING  
STOCK STATUS DETERMINATIONS

The Salmon Technical Team (STT) has reviewed D.1.a Supplemental NMFS Report 1 and agrees the Queets spring/summer Chinook salmon meet the stock designation requirements for an overfished status. Following the requirements of the Pacific Coast Salmon Fishery Management Plan and pending direction from the Council, the STT will plan to provide a proposed rebuilding plan for Council consideration during the September 2024 meeting.
