

SALMON ADVISORY SUBPANEL REPORT ON  
QUEETS SPRING/SUMMER CHINOOK REBUILDING PLAN –  
RANGE OF ALTERNATIVES AND PRELIMINARY PREFERRED ALTERNATIVE

The Salmon Advisory Subpanel (SAS) received a presentation from Dr. Alex Safiq of the Salmon Technical Team (STT) on the draft analysis for the rebuilding plan for Queets Spring/summer Chinook. The SAS understands that the data is very limited on this stock, and there are not any harvest management actions within the Pacific Fishery Management Council's authority that can help the stock rebuild. The SAS agrees with the recommendations of the comanagers to support habitat and supplementation projects, and the STT recommendation to figure out ways to collect more data on this stock.

**SAS Recommendation** – adopt for public review Alternative I (no action, status quo) as the Preliminary Preferred Alternative.
