

Errata to Supplemental Attachment 2

Staff noted an error in Supplemental Attachment 2, Section 3.4.1, Table 4-1. A transposition error led to inaccurate information recorded in the CA Comm and WA Rec columns in Table 4-1, below. Table 4-1 is corrected, with notes on specific corrections to the table and related analysis available below.

CORRECTED Table 4-1. Identification of target species among those included in this document's analysis by state and sector (identification of target species completed through consultation with members of the GMT). 'X' indicates that a species has been identified as a target species in that state and sector. 'X' indicates that a species has been identified as not directly targeted, but still often captured and retained with other, targeted species. No species included in this analysis are available for the WA commercial sector*

Species	CA Rec	CA Comm	OR Rec	OR Comm	WA Rec	WA Comm (N/A)
Shallow Nearshore						
Black and Yellow Rockfish	X*	X	X*	X		
Gopher Rockfish	X	X	X*	X

Flatfish						
Butter sole			X*			
Curlfin sole			X*			
Rock sole			X*			
Sand sole		X*	X*			
Starry flounder		X	X*			
Leopard shark	X	X				

Notes on Corrections:

- Freckled, halfbanded, pink, dwarf-red, and swordspine rockfish were previously marked as retained but not targeted. These species are not retained or targeted.
- The only flatfish targeted in California commercial fisheries (or any state/sector) is starry flounder. Butter sole is not targeted in any state or sector and is indirectly retained in the Oregon recreational sector.
- Gopher rockfish, Treefish and China rockfish are targeted in the California commercial fishery.
- Greenblotched rockfish is not targeted, but is retained, in the California commercial fishery.
- X's have been shaded to reflect that all species marked positively in the Washington recreational fishery are targeted.
