

COASTAL PELAGIC SPECIES ADVISORY SUBPANEL REPORT ON METHODOLOGY
REVIEW: INTEGRATED WEST COAST PELAGICS SURVEY

The Coastal Pelagic Species Advisory Subpanel (CPSAS) members provided input into and endorse the statement of its representative that appears in the Trawl Methodology Review Panel's Report. We would again like to thank National Marine Fisheries Service staff for its collaboration with industry in developing the new trawl system. Those efforts have likely improved performance of the system and have unequivocally increased industry's confidence in that performance.
