

SCIENTIFIC AND STATISTICAL COMMITTEE REPORT ON INSEASON ADJUSTMENTS
FOR 2026 AND TECHNICAL CORRECTIONS FOR 2027-28 – FINAL ACTION

The Scientific and Statistical Committee (SSC) reviewed a technical correction in the overfishing limit (OFL), acceptable biological catch (ABC), and annual catch limit (ACL) contributions for the Oregon/Washington vermilion rockfish stock. The 2025 catch projections were not included in the harvest specifications database, which continued to rely on harvest specifications from the 2021 stock assessment. This error also affected the calculation of the Shelf Rockfish Complex North of 40°10' N. lat. OFL, ABC, and ACL, as the harvest specifications of complexes are the sum of harvest specification contributions of the components. The SSC endorses the corrected OFLs, ABCs, and ACLs found in Tables 1 and 2 from Agenda Item [H.3 Attachment 1](#).
