

3.0 AREAS AND STOCKS INVOLVED

The management regime of this FMP applies to:

1. The U.S. EEZ of the northeast Pacific Ocean that lies between the U.S.-Canada border (as specified in Federal Register Volume 42, Number 44, March 7, 1977, page 12938) and the U.S.-Mexico border (Figure 3.1).
2. All foreign and domestic commercial and recreational vessels which are used to fish for groundfish in the management area.
3. All groundfish stocks which comprise this fishery management unit (see Section 3.1).

Management Areas. Upon consideration of stock distribution and domestic and foreign historical catch statistics, the following statistical areas (Figure 3.1) have been determined by the Council to be the most convenient administrative and biological management areas. These areas are based on International North Pacific Fisheries Commission (INPFC) statistical areas but in some cases have been modified slightly. The areas are, from south to north:

Conception - Southern boundary of EEZ to 36°00'N latitude
Monterey - 36°00'N to 40°30'N
Eureka - 40°30'N to 43°00'N
Columbia - 43°00'N to 47°30'N
Vancouver - 47°30'N to northern boundary of the EEZ

These areas may be modified or deleted and additional statistical reporting and management areas may be added, modified, or deleted if necessary to refine information or management of a species or species group. Changes will be implemented in accordance with the procedures in Chapters 5 and 6.

3.1 Species Managed by This FMP [Amendment 1]

See Table 3.1 for listing of species managed under this FMP.
