

SALMON TECHNICAL TEAM REPORT ON
PRESEASON SALMON MANAGEMENT SCHEDULE FOR 2011

The Salmon Technical Team (STT) is concerned that the February 8-11 schedule for completion of Preseason I Stock Abundance Analysis for 2011 Ocean Salmon Fisheries is too early to provide enough time for development of all the preseason forecasts. The following week (February 14-18) four members of the STT will be attending the Pacific Salmon Commission meeting and will not be available to work on the report. The STT would like the Council to consider delaying the work session to the next week with completion of the report and availability on the Council website on February 25. The STT acknowledges that this date precludes inclusion of the report in the briefing package for the March meeting.
