a/ The Council requested analysis of shifting the lingcod management line from the OR-CA border at 42° N. latitude to 40°10' N. latitude. An analysis using swept area biomass estimates of lingcod derived from the NWFSC trawl survey indicates 48% of the biomass south of 42° N. latitude occurs north of 40°10' N. latitude. The 40°10' N. latitude management line for lingcod is the Council preferred alternative for lingcod specifications to be analyzed in the DEIS.

b/ Harvest specifications decided in November 2011 were biased low due to missing OFL values for seven component stocks.

c/ Revised harvest specifications based on the methods proposed in Agenda Item F.2.a, Attachment 2 for determining OFLs and using the same basis for the ABCs and ACLs as decided by the Council in November 2011.
