<b>Percent of OY</b>	49.1%	81.2%	57.5%	96.7%	95.9%	95.7%	93.6%	97.6%
Key	= either not applicable; trace amount (<0.01 mt); or not reported in available data sources.							
a/ Values for dkbl, POP, and widow reflect Amendment 21 allocations. Bocaccio, canary, cow cod, and yellow eye represent 11-12 allocations. The allocation to the shoreside w hitting sector is only for the Amendment 20 initial allocation. In future years only one allocation will be made to the shoreside sector (w hitting and non-w hitting).								
b/ South of 40°10' N. lat.								
c/ Values represent projected impacts under the Council's Final Preferred Alternative for 2011-2012								
d/ Mortality estimates are not hard numbers; based on the GMT's best professional judgment.								
e/ Values in scorecard represent projected impacts for all species except canary and yellow eye rockfish, which are the prescribed harvest guidelines.								
f/ Includes NMFS trawl shelf-slope surveys, the IPHC halibut survey, and expected impacts from SRPs and LOAs.								
g/ Values for POP and yellow eye represent ACTs, which is a value less than the ACL to account for management uncertainty.
