a/ For the Makah encounter rate study, legal sized fish retained in open periods will be included in the tribal quota.

b/ The treaty Indian coho quotas include subarea management triggers of 56,700, 52,000, 37,800, and 37,800 coho for Option I, II, III and VI, respectively, for Area 4B, that would require season adjustment to ensure treaty Indian exploitation rate impacts on Interior Fraser coho do not exceed preseason expectations.

c/ The coho quota is a landed catch of coho with a healed adipose fin clip, except that for Option II in the north of Cape Falcon commercial fishery and Options III and IV in the north of Cape Falcon recreational fishery, there is a provision for a potential non-mark selective coho fishery in a portion of the fishery. See Tables 1 and 2 for details of the proposals.

d/ Includes a subarea quota of 5,000 marked coho for the area south of Leadbetter Point beginning August 11.

e/ Does not include Area 4B add on selective fishery of 6,000 (Options III and IV) coho with healed adipose fin clips.

f/ Does not include Buoy 10 fishery. Option I (8,800 coho August; 2,200 coho September), Option II (10,400 coho August; 2,600 coho September) Options III and IV (12,800 coho August; 3,200 coho September).
